ROCKER PROFILES

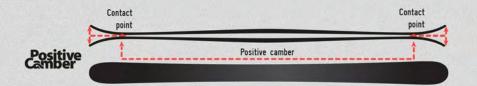

Our most powder-specific profile. Fully rockered at the tip and tail, with minimal camber underfoot, it maximizes float in soft conditions for unprecedented control, while the small amount of positive camber engages the two widest points of the ski just enough to allow maneuverability on the hardpack.

Rockered tips and tails combined with positive camber underfoot to promote flotation in soft snow and provide remarkable edge control in the harder stuff.

Entry rocker with positive camber under foot and no tail rocker. Promotes flotation in the soft snow while giving the ski great drive and edge hold on the hard pack.

The next level. Subtle rocker in the tips and tails with positive camber underfoot. This enhances carving while also disengaging the tip and tail to create a catch-free feel that's ideal for buttering and switch take offs.

Traditional sidecut profile with tip rocker — for all mountain everyday ripping.

Traditional camber engages the tip and tail of the ski, enhancing ease of entry and exit into and out of a turn, while maintaining solid edge hold.

CORE PROFILES

(R5)

TECH FEATURES

2.2 Edge - heat treated, built to avoid excess weight while maintaining durability

2.5 Edge - oversized and specially heat-treated, built to resist impact damage

Comp Base - Armada's fastest base

50/50 - a blend of speed and durability, the base for the skier who wants it all

S7 Base - durable and low maintenance, with a speed additive for quickness

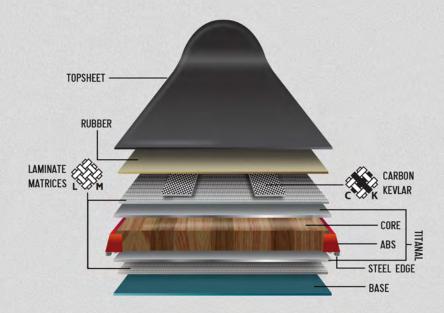

Titanal - two layers of titanium aluminum provide stability at the highest of speeds

Laminate Matrix - directional layering of fiberglass dictates flex pattern and torsional rigidity

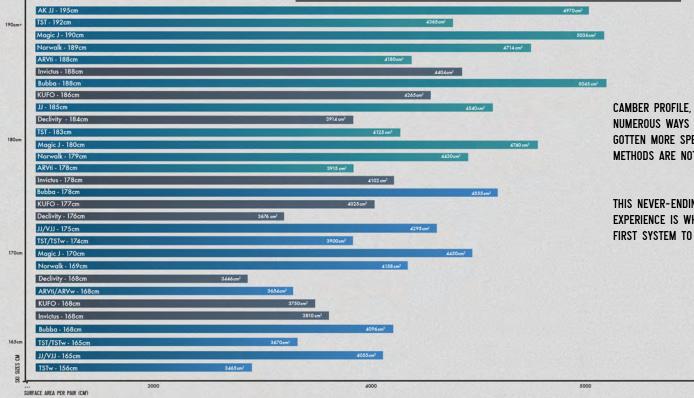

- carbon fiber strips laid in from tip to tail to add liveliness to ski

Carbon Kevlar Stringers - Carbon and Kevlar stringers used in the tail to add pop and extend life

Step Drill Bit System - The custom drill bit increases screw retention in Armada's skis

FLOATATION GUIDE

CAMBER PROFILE, WAIST SIZE, SIDEWALL TYPE... THERE ARE NUMEROUS WAYS TO COMPARE SKIS. AS OUR TOYS HAVE GOTTEN MORE SPECIALIZED THROUGHOUT THE YEARS, THESE METHODS ARE NOT ENOUGH.

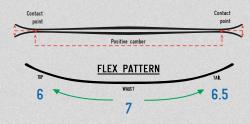

THIS NEVER-ENDING DESIRE TO IMPROVE THE SKI BUYING EXPERIENCE IS WHAT LED OUR ENGINEERS TO DEVELOP THE FIRST SYSTEM TO QUANTIFIABLY MEASURE SKI FLOATATION.

Updated for 14/15, the El Rey features a 20% softer wood core wrapped in fiberglass for a forgiving, yet responsive, feel. Its profile and tighter turning radius allows fast edge control throughout the park and the mountain. From tight trees, to jump lines, to jibs, the El Rey is

a great tool for those who appreciate shredding trails before lapping park.

14SKI-TAN

The Tantrum is inspired by the TST and has tip rocker but no tail rocker. With the Tantrum you get the cheating float and initiation of tip rocker, with the drive, stability, and power of a traditional cambered ski. Built with a wood core and a medium-wide platform, the Tantrum will keep you exploring all-mountain terrain.

FEATURES:

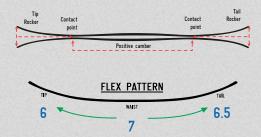

- _Cap
- _UltraLight Core
- _EST All Mtn Rocker
- _S7 Base
- _Laminate Matrix
- _1.7 Impact Edge

SIZES

LENGTH	TIP	CONTACT POINT	WAIST	TAIL	RADIUS
138cm	117	127	98	117	10m
147cm	118	128	99	118	11m
156cm	119	129	100	120	12m

This Junior JJ utilizes the same geometries and profile as the JJ, creating the most versatile junior powder ski on the market. With EST Freeride Rocker, the Triple J dominates deep snow but still rips the hardpack on the way back to the lift. The Triple J will do everything from landing switch in powder to making your parents feel slow.

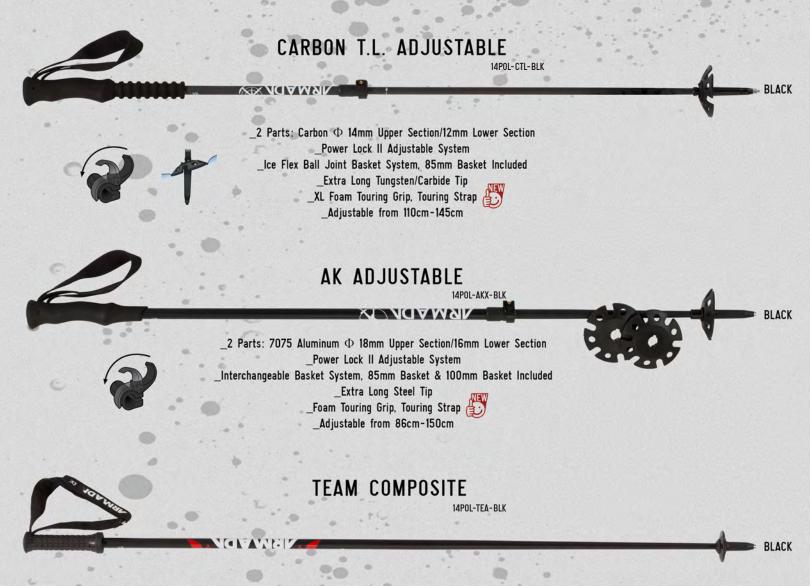

FEATURES:

- _Сар
- UltraLight Core
- _EST Freeride Rocker
- _S7 Base
- _Laminate Matrix
- _1.7 Impact Edge

LENGTH	TIP	POINT	WAIST	POINT	TAIL	RADIUS

Available in: 80, 90, 100, 105, 110, 115, 120, 125cm

CIARMADN X GORE-TEX®

Our mission to build the best performing, most advanced outerwear possible would not be complete without our partnership with GORE-TEX®. Our passion and creativity is now further strengthened by the latest technology and backed by sound science. The result is unique Armada designs offering the highest level of protection and comfort.

VECTOR SERIES

GORE-TEX fabrics are exclusively used in the Vector Series to deliver top-of-the-line, long lasting performance that you can count on.

FABRICS:

GORE-TEX® FABRICS

Armada garments engineered with GORE-TEX® fabric offer the most reliable waterproof, wind-proof and breathable performance available allowing you to stay out longer. Backed by Gore's GUARANTEED TO KEEP YOU DRY® promise, Armada GORE-TEX garments are designed to last.

GORE-TEX® PRO NEW GENERATION

To meet the needs of our team, mountain guides and serious backcountry skiers, GORE-TEX® Pro is used to provide tough, extremely breathable, waterproof and windproof protection in the harshest conditions imaginable. The new generation of GORE-TEX® Pro is engineered specifically for the intense work/rest cycles in backcountry skiing by using a new membrane to efficiently regulate temperature and moisture during climbs and descents.

MICROGRID BACKING TECHNOLOGY

This technology improves garment comfort and performance using an innovative patent pending internal backer fabric. This technology improves internal abrasion and snag resistance allowing it to easily slide over layers, enhances garment breathability and decreases garment weight.

FLANNEL BACKER

This Flannel backer is laminated on the inside of our GORE-TEX 3L products to improve garment comfort and performance by adding warmth and reducing noise.

ARMADA SERIES FABRIC

The Armada Series starts with high quality face fabrics that are custom developed in a variety of weights and weaves created to complement each design. Our fabrics are laminated to a high performance waterproof, breathable membrane with a minimum standard of 15K/15K or 10K/10K on the interior, and the exterior is finished with a DWR treatment to shed water and snow on the surface.

INSULATION

Down 750/600

Our down is our lightest and most compressible insulation with the highest warmth to weight ratio in our line.

Available in 750 & 600 fill-power.

PolyFill Insulation

Our PolyFill is a lightweight, high-loft insulation made from fine polyester fibers.

PolyFill Insulation Low Loft

Our PolyFill Low Loft is a lightweight, compact insulation made from fine polyester fibers and used when less bulk is desired.

FEATURED LININGS:

SuperFlo Lining System

Our SuperFlo Lining System is our targeted lining system for 2-layer shell garments developed to maximize comfort by optimizing the breathability with large open mesh side panels while a smooth closed-mesh lining is placed in th rest of the body providing snag-free movement between layers and a little extra warmth.

SuperFlo Insulation System

Our SuperFlo Insulation System is our targeted lining system for 2-layer insulated garments developed to maximize comfort by optimizing the breathability with a breathable fleece side panels to allow excess heat to easily escape while the insulated embossed taffeta keeps your core toasty.

KEY FEATURES:

RECCOR

RECCO® is an avalanche rescue system utilized worldwide to facilitate the rapid location of burials. The two parts—reflector and detector—enable rapid pinpointing using harmonic radar but are not a substitute for transceiver use. Complementary in function, the RECCO system increases the chance of being found in time.

Schoeller®-Keprotec®:

New for 14/15, our pant cuffs are reinforced with this Schoeller Keprotec fabric. This protective fabric was originally developed for motorcycle racing and uses high-tensile fibers, such as Kevlar®, to ensure the high durability.

100% Seam Sealed

Waterproof fabric will not keep you dry by itself. In order to complete the waterproofing of a garment, the seams with stitching must be sealed with a waterproof tape.

YKK® AQUAGUARD®

YKK's AQUAGUARD® Water Repellent Zippers are used to seal off our garments from the elements.

YKK Zippers

YKK Zippers are used as our standard throughout the line to provide quality zippers you can count on.

Reactive Hood System

The Reactive Hood System provides the ability to easily react to changing mountain weather. The system utilizes a 3-way adjustment, accessible from inside and outside the jacket, and a quick release pull to instantly loosen the hood. All excess bungee stores out of your way inside the jacket.

Helmet Compatible Hood

All our hoods are designed to be fully functional while wearing a helmet.

Ergonomic Hood Profile

The carefully shaped hood design keeps you protected while allowing a full range of motion while skiing.

Reinforced Brim

Our supported brims keep your face sheltered from snow and rain.

Jacket-to-Pant Snap Interface

Our jacket-to-pant snap interface provides a simple connection between your jacket's powder skirt and your pant.

An overall relaxed fit with standard length.

Moderate in width and length, this fit has light tailoring for a trimmer silhouette and an additional 1-2" in length.

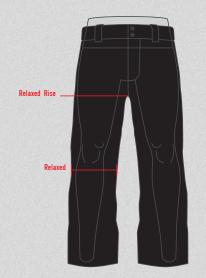

Relaxed width and an additional 3-4" in length.

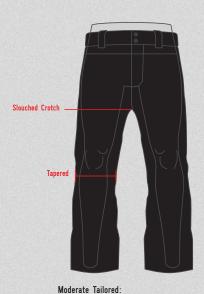

An articulated cut to improve mobility when skiing and hiking. Slightly narrower at the hem and forearm.

Tech:

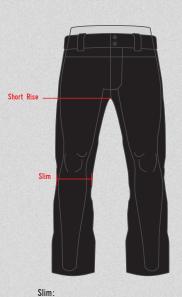

Traditional:

Relaxed throughout the waist, hips, and leg.

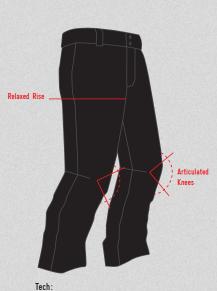

Moderate tailoring

Moderate tailoring that tapers to an articulated knee to optimize mobility in a fashion forward cut.

Slim through the legs and hips with a relaxed waist.

An articulated cut to improve mobility when skiing and hiking.

(IARMADNX GORE-TEX°

VECTOR SERIES

Our mission to build the best performing, most advanced outerwear possible would not be complete without our partnership with GORE-TEX®. Our passion and creativity is now further strengthened by the latest technology and backed by sound science. The result is unique Armada designs offering the highest level of protection and comfort.

GORE-TEX fabrics are exclusively used in the Vector Series to deliver top-of-the-line, long lasting performance that you can count on.

FABRICS:

GORE-TEX® FABRICS

Armada garments engineered with GORE-TEX® fabric offer the most reliable waterproof, wind-proof and breathable performance available allowing you to stay out longer. Backed by Gore's GUARANTEED TO KEEP YOU DRY® promise, Armada GORE-TEX garments are designed to last.

ARMADA SERIES FABRIC

The Armada Series starts with high quality face fabrics that are custom developed in a variety of weights and weaves created to complement each design. Our fabrics are laminated to a high performance waterproof, breathable membrane with a minimum standard of 10K/10K on the interior, and the exterior is finished with a DWR treatment to shed water and snow on the surface.

INSULATION:

Down 600

Our 600 fill-power down provides an extremely warm insulation that offers an unrivaled low weight and compressibility.

PolyFill Insulation

Our PolyFill is a lightweight, high-loft insulation made from fine polyester fibers.

PolyFill Insulation Low Loft

Our PolyFill Low Loft is a lightweight, compact insulation made from fine polyester fibers and used when less bulk is desired.

KEY FEATURES:

RECCO®

RECCO® is an avalanche rescue system utilized worldwide to facilitate the rapid location of burials. The two parts-reflector and detector-enable rapid pinpointing using harmonic radar but are not a substitute for transceiver use. Complementary in function, the RECCO system increases the chance of being found in time.

Schoeller®-Keprotec®:

New for 14/15, our pant cuffs are reinforced with this Schoeller Keprotec fabric. This protective fabric was originally developed for motorcycle racing and uses high-tensile fibers, such as Kevlar®, to ensure the high durability.

100% Seam Sealed

Waterproof fabric will not keep you dry by itself. In order to complete the waterproofing of a garment, the seams with stitching must be sealed with a waterproof tape.

YKK® AQUAGUARD®

Water Repellent Zippers YKK's AOUAGUARD® Water Repellent Zippers are used to seal off our garments from the elements.

YKK Zippers

YKK Zippers are used as our standard throughout the line to provide quality zippers you can count on.

Reactive Hood System

The Reactive Hood System provides the ability to easily react to changing mountain weather. The system utilizes a 3-way adjustment, accessible from inside and outside the jacket, and a quick release pull to instantly loosen the hood. All excess bungee stores out of your way inside the jacket.

Helmet Compatible Hood

All our hoods are designed to be fully functional while wearing a helmet.

Eraonomic Hood Profile

The carefully shaped hood design keeps you protected while allowing a full range of motion while skiing.

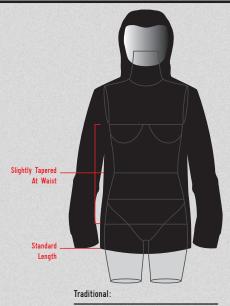

Reinforced Brim

Keeps your face sheltered from snow and rain.

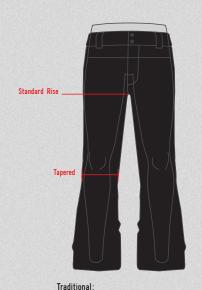

Jacket-to-Pant Snap Interface

Our jacket-to-pant snap interface provides a simple connection between your jacket's powder skirt and your pant.

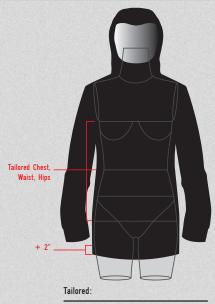

WOMENS FITS

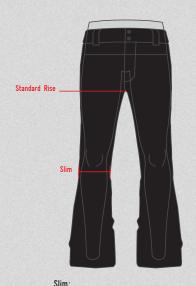

Subtle shaping and generous length for the ultimate in comfort and mobility.

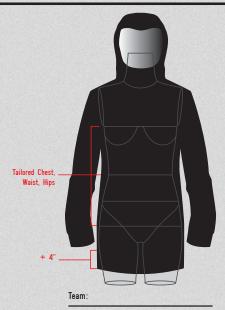

The most versatile fit for a flattering look, comfort, and mobility. Has subtle shaping through the leg.

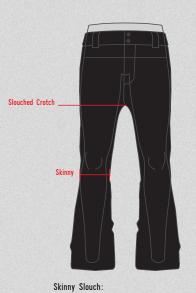

A more tailored fit coupled with an extra 2" of length for a longer, slimmer silhouette.

A more tailored fit through the hips and thigh with a tapered knee and flared hem.

An extra long body with a flattering shape, that provides more protection and more style.

A slouchy waist with a skinny knee and flared hem.
