RACE

**WHEN YOU ONLY TAKE OFF
YOUR SKIS TO CLIMB THE
PODIUM. WHEN YOU CAN
TURN YOUR BLOOD, SWEAT
AND TEARS INTO GOLD.
WHEN THE ONLY OPPONENT
TO BEAT IS YOU.
WHAT'S YOUR LIMIT?**

Winning isn't just about being faster or stronger than everyone else. Winning is about not giving up, about never being discouraged and never quite satisfied. It's about winning all the little everyday battles in preparation for the big ones. Winners win against themselves first, transcending their inhibitions and pushing their limits, then they win against others.

WINNERS GIVE EVERYTHING – AND IN RETURN, WE GET IT ALL.

SKI TECHNOLOGY | KERS

THE EXTRA BOOST

KERS Technology works like a turbo charger that provides additional power and acceleration by stiffening the tail of the ski in outturns.

THE EFFECT: A BOOST, CATAPULTING THE RIDER INTO THE NEXT TURN.

Just like when Formula 1 pilots push a button for that extra notch of Speed. HEAD KERS Technology is an electronic, fully automatic and integrated system.

TECHNICAL BACKGROUND

HEAD KERS Technology is an evolution of the idea behind HEAD's Intelligence™ Technology. But unlike Intelligence™, KERS does not influence the torsional stiffness of the ski, KERS empowers the skis' longitudinal flex. Also KERS Technology is based on a completely new chip capable of accumulating power and keeping it in store for the right moment.

Piezoelectric fibers transform kinetic energy into electrical energy which is stored in the embedded chip in the ski. Electrical energy is immediately released to areas of the ski, where

additional energy is requested by the sensor. Timing and release are automatically controlled and coordinated. Depending on the flex pattern of different ski models, sensors are programmed beforehand: the more aggressive the ski has to be, the stiffer the tail will become.

Skis experience maximum flex at the end of a turn. At this moment an active microchip releases energy into the fibers of the tail. The tail of the ski then stiffens up, immediately increasing rebound for maximum acceleration at the end of the outturn.

BINDING TECHNOLOGY | FREEFLEX

FREEFLEX PRO

Presenting the innovative Freeflex Pro System we focus on a new level of performance: Due to reduced stand height the gliding band is much closer to the ski boot, and our free-gliding heel allows the ski to flex unimpeded. This ensures consistent release values, reduced risk of injury and even more power and precision steering your skis.

RACE PRO HEEL

The reduced stand height corresponds to the FIS regulations. This gave us the opportunity to redesign the heel track, making it 1 mm higher and 8 mm wider for even more stability and direct power transmission. Moreover, increased size of the gliding inserts reduces friction and provides even smoother and more consistent release performance in all skiing situations and conditions.

DIAGONAL TOE

Full Diagonal Toes feature 180° release action both horizontally and vertically. Maximum safety in backward twisting-fall situations. Race Diagonal Toes are tuned for racing purposes. Due to higher release force vertically than horizontally, it holds up to the high backward lean forces in racing.

BOOT TECHNOLOGY | RAPTOR

DOUBLE POWER BOOSTER VELCRO

The strap of the Double Power Booster Velcro works as a double pulley for better closure and a tighter wrapping on the cuff. The elastic Booster Strap allows more dynamical response of the boot.

The result: more precise transmission and faster ski reaction. (Manufactured under license from Skimetrix Ltd.)

Protected under one or more of the following:
European patent N. 1087676, US patent N. 6.026.594
Canadian patent N. 2.335.698. Other patents pending.

SPINEFLEX BUCKLES

Spineflex is a revolutionary buckle concept with a flexible element and a constant closure point. The flexible element allows the buckle to adapt to the shell profile and thus provide a homogeneous foot wrapping independent from the degree of closure. The increased precision and comfort created from the absence of pressure points results in better performance.

GOGGLES

HORIZON RACE

Perfect fit, optimum comfort and a fully unrestricted field of vision mark HEAD's latest development in racing goggles.

Thanks to the new FRAME LENS design, the horizontal field of vision extends upwards by up to 20% compared to conventionally designed goggles. The enlarged field of vision, called the TUCKSPHERE, makes it possible for racers to adopt a lower tuck position without disruptively restricting their field of vision a clear advantage, particularly in its aerodynamic effect.

The double lens, which is quickly and easily replaceable using the Speed SNAP system, offers 100% UV protection. The highly robust and light polycarbonate lens material provides protection from mechanical stresses.

FEATURES:

- Sprayed polycarbonate lens for maximum safety
- UV 400 protection & anti-fog
- Double lens
- Triple-layer foam
- Silicon layer
- Extrem wide field of vision
- Compatible with HEAD helmets
- Inclusive spare lens

GOGGLE TECHNOLOGY | HEAD FIELD OF VIEW

HEAD FIELD OF VIEW

The unique FRAME LENS structure expands the maximum field of vision to the highest level. This is very important for many reasons, all up front: maximum sight in the tuck position – THE TUCKSPHERE.

GOGGLES

HORIZON LENS KIT

The optional LENS KIT for our HORIZON series goggles, developed in close collaboration with our racers, contains four additional lenses. The LENS KIT's alternative lenses provide ideal coverage for a wide spectrum of light levels. The percentage VLT (Visible Light Transmission)

specifies how much of the visible daylight is filtered through to the eyes – a higher percentage therefore indicates a lower light blocking effect, while lenses with lower VLT block out more light and are designed for use in brighter conditions.

Clear lens

PERFORMANCE

**WHEN YOU LIVE LIFE TO
THE FULLEST SPEED.
WHEN SLOWING DOWN IS
A WASTE OF TIME. WHEN
YOU'RE READY TO TAKE
DEEP CUTS FOR A BETTER
EDGE.
WHAT'S YOUR LIMIT?**

When the cage called summer is opened and the heat has finally passed, the skier is released to the mountain on cold turkey. In a state of limitless rush and stampede, he feeds his soul on Speed, his spirit on freedom, his ego on altitude.

**ONCE AGAIN, WE ARE ON TOP OF THE WORLD – READY TO EMBRACE
IT AND RACE IT.**

SKI TECHNOLOGY | ERA 3.0 S

PERFORMANCE

ERA 3.0 S

THE SUPERSHAPE LINE WAS CALLED THE SUPERSHAPE BECAUSE FROM ITS INCEPTION IT WAS SHAPED TO PERFECTION. NOW, THE SUPERSHAPE HAS TAKEN ON ERA 3.0 S.

It's the sports version with a multi-faceted ski designed with race innovation and inspiration, yet now with the addition of Rocker, Radius and Rebound. With a totally unique

V-Shape construction this is not just a new ski, it is a totally new skiing experience. The new Supershape with ERA 3.0 S is the combination of all mountain carving, race technology,

and a new gradient on turning mechanics and ski capabilities sure to impress skiers on many levels. 10% Rocker and 90% camber are combined to impress. The additional layer

of Intellifibers provides explosive power, control and increased responsiveness.

BINDING TECHNOLOGY | PRD & PRX POWERRAIL

POWERRAIL TECHNOLOGY

THE PERFORMANCE BINDING THAT MEETS THE DEMANDS OF AMBITIONED SKIERS. WELCOME TO THE FAST LANE IN BINDING TECHNOLOGY EVOLUTION.

- Easy Mounting & Adjusting
- Modular System
- Ideal for Retail, Demo and Rental
- Maximum Flexibility

FEATURES

NO DRILLING OR SCREWING. JUST SLIDING.

- [1] Open toe lever and adjust.
- [2] Do the same with the heel.
- [3] Close the toe and heel lever. Done.

MODULAR SYSTEM

The PowerRail System was built modularly to match any rider's needs. Covering all segments with choices of Standard or Pro bases and dampeners in different widths for perfect ski fitting. PowerRail suits sole lengths between 260mm and 380mm.

DOUBLE THE FLEX

The PowerRail Pro base is equipped with an additional freeflex band, linking the toothed areas at the toe and heel side of the base, allowing toe and heel pieces to glide unhindered. The double freeflex function ensures even more freedom, safety, and performance.

NATURAL FLEX

To ensure unhindered natural flex the PowerRail base is mounted with one pair of fixed screws and three pairs of free gliding screws. This way the base smoothly adapts to the flex of the ski.

LONG-TERM PERFORMANCE

Each toe and heel guide can be exchanged or fitted separately, ensuring full functionality even after massive rental use.

BETTER POWER TRANSMISSION

PowerRail bases are 7% wider and 25% lower than Railflex II bases, directly improving power transmission from boot to edge.

SKI TECHNOLOGY I INTELLIGENCE TECHNOLOGY

ELECTRONIC SKI MANAGEMENT SYSTEM

HEAD's theory of relativity: Ski performance is not an absolute measure. What you want out of a ski always depends on how and where you ride. On hard-packed slopes you want perfect edge grip. On soft snow, you want more maneuverability. Breaking the slope record you want your ski to perform differently than when you're just cruising with your friends or family. Adaptive HEAD Intelligence™ Technology helps your ski perform perfectly – both relative to terrain and your individual riding mode.

HOW IT WORKS

Intellifibers positioned at 45° in front of the binding transform mechanical impulses into electrical energy. The harder you ride, the more energy is produced. The electrical energy is led back to the Intellifibers. This causes them to stiffen up, putting more rebound and torsional stiffness into the ski.

WHAT IT DOES

Their 45° position in front of the binding increases the ski's torsional stiffness, pushing the edge into the snow in hard turns. Intelligence™ progressively stabilizes the entire ski at high speeds.

THE EXTRA BOOST

Some HEAD high-end skis boast **Intelligence™ Chip Technology**. Here, the electrical energy produced by the Intellifibers is not just recycled, but accumulated and released bit by bit through a pre-programmed chip – individually timed to match the oscillation properties of the ski. Thus, the effect of Intelligence™ is multiplied, providing even more performance relative to your skiing style.

BOOT TECHNOLOGY | PERFECT FIT

PERFORMANCE

Venture 130

Challenger 130

Vector 125

PERFECT FIT

Perfect Fit is the revolutionary customization system that provides the best level of precision, comfort and durability.

1. 100% full customization.

The new innerboot perfectly adapts to the foot and the shell.

2. Increased precision, performance and comfort durability.

3. Customization can be repeated virtually without limitation.

OVEN

1. Warm up shell and liner for 5 minutes at 80°C.
2. Step in and close the buckles.
3. In 10 minutes the customization is ready.

BOOT TECHNOLOGY | CHALLENGER

PERFORMANCE

NEW DOUBLE POWER SPINEFLEX BUCKLES

Spineflex is a revolutionary buckle concept with a flexible element and a constant closure point. The flexible element allows the buckle to adapt to the shell profile and thus provide

a homogeneous foot wrapping independent from the degree of closure. The increased precision and comfort created from the absence of pressure points results in better performance.

ADAPTIVE FIT TECHNOLOGY

Adaptive Fit Technology is the first and only ski boot technology that lets you change the width of your boot from a 104mm comfort/performance last to a 102mm precision/performance last with the turn of a screw.

POWER SKI HIKE

Provides the easiest selection of ski and hike mode available. Easy to identify and operate, yet providing a powerful connection between the cuff and shell for maximum precision and impulse transmission.

3 STEPS TO PERFECT FIT

In combination with the Adaptive Fit Technology available on the new Challenger line it defines the new state of the art in the high performance skiboots category.

HELMET TECHNOLOGY | RUNTASTIC

PERFORMANCE

HEAD and runtastic teamed up to build the world's first fully integrated runtastic product in winter sports.

HEAD SENSOR BT RUNTASTIC

HEAD's safety award-winning SENSOR helmet is an all-rounder for every terrain. Its safety, comfort and clever features characterize the helmet. RUNTASTIC, one of the most popular fitness apps for smart phones, adds yet another feature to the helmet. The outcome is the most innovative, emotional, safe, and fun helmet for the upcoming winter season.

runtastic fitness app key features:

- Listen to music
 - Live tracking (friends can follow you)
 - Cheering from friends
 - Voice Coach
 - Distance
 - Duration
 - Speed
 - Pace
 - Heart Rate Zones
 - Calories
 - Elevation gain/loss
 - Interval training
 - All data is tracked & saved
 - and more ...
- Languages:
- 18 languages (app)
 - 10 languages (web)

Connect the runtastic Heart Rate Monitor* with your:

- + smartphone
- + cardio equipment
- + runtastic equipment

* Works with iPhone 4S, iPhone 5. More devices: www.runtastic.com/en/products

HELMETS

SENSOR BT RUNTASTIC

HEAD SENSOR, the base model for HEAD's SENSOR BT RUNTASTIC, is the awarded winner of the German ADAC helmet test. The in-mold construction makes this helmet a light-weight, which is packed with unique features to make it as comfortable as safe. The ear pads with integrated speakers are height adjustable and the built-in microphone is bendable for your comfort. The integrated Bluetooth module connects with your smart phone to output all the valuable information of the app straight to your ears and enables other options, like taking phone calls for example. This makes the SENSOR BT RUNTASTIC the most innovative and fully technical integrated winter sports helmet on the market.

ART.N°: 324013

FEATURES:

- BT System with microphone and audio earpads
- Adjustable ventilation
- Height adjustable earpads
- Twist stop goggle retainer
- 2D-Fit system
- Integrated liner windshield

SIZES AND WEIGHTS:

XS/S	M/L	XL/XXL
450g	470g	500g

HELMET TECHNOLOGY | CONEHEAD

CONEHEAD TECHNOLOGY IN ACTION:

In a crash, the impact force pushing towards the head causes the higher density outer layer to compress. At the same time, the head is travelling in the opposite direction, compressing the lower density inner layer and the tops of the cones of the higher density outer layer. Therefore the energy is spread sideways within the foam

instead of towards the head. The increasing resistance of the collapsing cones allows the head to gradually slow down.

THE RESULT is a lower g-force experience for your head.

THE BENEFITS: A lighter helmet + softer protective shock absorbing foam closer to your head.

CREST

High-tech for all-mountain use. The CREST offers outstanding impact protection, thanks to its HYBRID SHELL and CONEHEAD SANDWICH CORE. The adjustable 2-zone ventilation, the 3D FIT SYSTEM and the patented height-adaptable earpieces ensure maximum possible comfort and customisability.

FEATURES:

- Durable and lightweight hybrid shell construction
- Perfect shock absorption with CONEHEAD SANDWICH CORE
- Adjustable dual zone ventilation
- Height adjustable earpads
- Twist stop goggle retainer
- 3D-Fit System
- Integrated liner windshield
- Removable brim

GOGGLES

STIVOT

The STIVOT GOGGLE has the perfect shape and design for our Performance and Allride helmets. The spherical polycarbonate double lens provides maximum visibility and UV 400 protection. The silicone-coated straps ensure a non-slip grip on the helmet.

FEATURES:

- Sprayed polycarbonate lens for maximum safety
- UV 400 protection & anti-fog double lens
- Triple-layer foam
- Silicone layer
- Compatible with HEAD helmets
- Inclusive spare lens

PROTECTION

FLEXOR VEST

The FLEXOR VEST offers not just a soft protector that fits your back perfectly, but also a high-quality 4-way-stretch thermo fleece, an extra-wide waist belt and permanent anti-bacterial functionality through the use of POLYGIENE.

ART.N°: 395213

FEATURES:

- Perfectly dampening and highly energy absorbing with SAS TEC viscoelastic foam
- Antibacterial and odor-freeness life guarentee with Polygiene 
- Removable protection unit
- 4-way stretch fleece material

ALLRIDE

**WHEN IDEAS ARE THE ONLY
THING YOU FOLLOW. WHEN
ALL TYPES OF TERRAIN
FEEL LIKE YOUR HOME TURF.
WHEN YOU LOOK BEYOND
HORIZONS AND THEN GO
SKI THERE.
WHAT'S YOUR LIMIT?**

There are individuals who defy categorization. People who live and think out of the box simply because they deny the boxes' existence. Free spirits who cross boundaries of convention without even realizing them. Characters whose answer to *what?* is whatever. To *where?* is wherever. And to *what for?* is forever.

**WE LIVE IN THE MOMENT. IN THE TERRAIN. AND WHILE WE MAKE
THE BEST OUT OF WHAT WE SEE, WE'RE HAPPY WITH EVERYTHING
WE'VE GOT.**

ERA 3.0 – ROCKER DONE RIGHT

IMAGINE A SKI THAT PERFORMS FOR EVERYONE, ANYWHERE: ONE FOR ALL. ALL IN ONE. HEAD ERA 3.0 IS NOT YOUR ONE-DIMENSIONAL «HAVE A PROBLEM? WE FIX IT!» TECHNOLOGY. ERA 3.0 IS A COMBINATION OF TECHNOLOGIES, SHAPE AND GEOMETRY. THINK ROCKER, THINK RADIUS, THINK REBOUND. THINK 3-DIMENSIONAL.

⊕ EFFORTLESS STEERING

⊕ SOFT SNOW VERSATILITY

20% ROCKER, 80% CAMBER

1 | ALLRIDE ROCKER

FOR SUPERIOR STEERING AND INCREASED FLOATATION.

We place a highly targeted amount of rocker in each model to ensure maximum performance for all ability levels. Steering is easier for all skiers and soft snow versatility is enhanced.

⊕ INSTANT GRIP

⊕ EFFORTLESS TURNING

2 | PROGRESSIVE RADIUS

FOR TREMENDOUS TURNING.

Regular rocker makes skiers place their ski further on edge to have it touch from tip-to-tail. With progressive radius, up to 50% less angulation is needed to enjoy full edge contact. MORE EDGE ON THE SNOW = MORE EDGE GRIP.

⊕ MORE STABILITY

⊕ REDUCED VIBRATIONS

3 | INTELLIRISE REBOUND

FOR TARGETED STABILITY.

We move our legendary piezoelectric Intellifibers to the tip of the ski. The nasty tip vibrations found on regular rockers are not found here. These skis are too smart for that.

BOOT TECHNOLOGY | EDGE

EDGE TECHNOLOGY

THE HEAD EDGE REMAINS THE MOST VERSATILE, ADAPTIVE BOOT ON THE MARKET. WITH ADAPTIVE FIT TECHNOLOGY, A TRI(BI)-INJECTION FRAME, EASY ENTRY SHELL DESIGN AND SPINE-TECH DOUBLE POWER BUCKLES, THE EDGE IS ON THE CUTTING EDGE OF PERFORMANCE AND COMFORT.

ADAPTIVE FIT TECHNOLOGY

Adaptive Fit Technology is the first and only ski boot technology that lets you change the width of your boot from a 104 mm comfort/performance last to a 102 mm precision/performance last with the turn of a screw.

TRI (BI)-INJECTION FRAME

A high performance, multi-density shell that optimizes easy entry, foot wrapping, comfort and energy transmission.

DOUBLE POWER SPINE-TECH BUCKLES

Spine-Tech buckles provide constant traction and avoid pressure points, improving both comfort and precision. The ergonomic, patented Double Power lever increases the leverage of the buckle by 50%, halving the effort required to buckle in constant release values.

BOOT TECHNOLOGY | CUBE3

EASY AS 1, 2, 3.

DEVELOPING OUR CUBE3 LINE, WE DECIDED TO TACKLE THE ONE CHALLENGE EVERY SKIER FACES EVERY DAY ON THE MOUNTAIN: TO COMBINE GREAT SKIING PERFORMANCE WITH GREAT WALKING PERFORMANCE. AFTER ALL, ON ANY GIVEN DAY, WE SPEND UP TO 30% OF OUR TIME OUTSIDE OF THE BINDING.

EASY IN

Thanks to a new quick entry geometry, the Cube3 is extremely easy to get into. Simply tilt back the shaft and step in. In addition, the 3-buckle construction with an oversized top buckle allows easy and quick buckling in and a great, snug fit.

EASY WALK

Outside of the binding, the shaft of the Cube3 is always unlocked, allowing natural walking.

This, in combination with (patented) SoftWalk heel and grip system on the heel, makes the Cube3 a superb walking boot.

EASY SKI

The moment you step into your binding the patented integrated AutoSkiWalk mechanism blocks the shaft, allowing you to speed off down the mountain without bowing, bending or buckling.

HELMET TECHNOLOGY | RESPIRO CORE

RESPIRO CORE

Our new RESPIRO core is used in the helmets of the STIVOT and VENTOR series. This EPS foam core is perforated throughout and this construction ensures a pleasantly ventilated micro-climate inside the helmet, coupled with a low weight.

HELMETS

STIVOT AIR

The models in the STIVOT AIR range have inherited the legacy of our racing helmet. The half-shell design with soft earpieces, adjustable ventilation and an additional size adjustment system make this helmet an ideal protection for sports-minded skiers and snowboarders.

FEATURES:

- Adjustable ventilation
- 2D-Fit system
- Goggle retainer
- Beanie liner

PROTECTION

FLEXOR UNIT

The UNIT is highly customisable with an extra-wide waist strap and size-adjustable SHOULDER and CONNECTOR STRAPS, and it also provides ultimate comfort and protection. In addition, the removable SHOULDER STRAPS make the UNIT FIS-compliant and suitable for racing use.

ART.N°: 395313

FEATURES:

- Perfectly dampening and highly energy absorbing with SAS TEC viscoelastic foam
- Antibacterial and odor-freeness life guarantee with Polygiene® 
- Removable protection unit
- FIS compatible with removable shoulder straps
- Height adjustable trouser connector straps

SIZES:

S – XXL

35l

FREESKI

**WHEN YOU ARE A SLAVE
ONLY TO FREEDOM. WHEN
TIME STOPS WHILE YOU
FLY. WHEN YOU SEE LINES
WHERE OTHERS SEE
DISASTER.**

WHAT'S YOUR LIMIT?

Paths are beaten to be abandoned, the unknown calls for exploration and the impossible needs a challenge. It's a fine line between sport, art and madness, and people who search for and ride that line are going further, charging steeper and flying higher every year. And while we know all about the laws of physics, we question them by experience:

**WE DREAM THE DREAM OF FLYING BEFORE WE FACE THE REALITY
OF LANDING – AND STILL LIVE TO TELL THE TALE.**

BIG MOUNTAIN SKI TECHNOLOGY | TTS

BIG MOUNTAIN SKIS WITH BEYOND RACE TECHNOLOGY

TTS – TIP AND TAIL STABILIZER SYSTEM.

A SKI WITH REDUCED VIBRATION AND INCREASED DAMPENING AND A SYSTEM TO INCREASE TORSIONAL STRENGTH ALL WHILE AT THE SAME TIME REDUCING SWING WEIGHT.

TTS is a stabilizing exoskeleton which dampens the vibrations normally felt from rockered tips and tails also reduces overall swing weight and creates a ski with a playful yet high level of performance. The system is comprised of an elastomeric inlay for vibration control as well as a glass fibre exoskeleton for stability and torsional strength. This combination not only reduces vibrations but creates better

pressure distribution upon entry and exit of a turn by minimizing lateral flex of the ski. Reducing overall vibration means better edge control and therefore increasing overall skiing performance and skier experience. In addition, the reduction of necessary core materials in the tips and tails has created a lighter swing weight for easier handling and maneuverability both on snow and in the air.

BINDING TECHNOLOGY | AAADRENALIN

AAADRENALIN – THE PERFECT ALL-ROUNDER

With the new AAAdrenalin Freeride binding from TYROLIA, no terrain is out of reach. This binding provides a level of skiing performance never before seen in an alpine binding. It combines performance driven freeride features with the ultimate ergonomic walking mechanism for maximum freedom on-and off-piste. Overcome boundaries smoothly for a perfect ride.

The AAAdrenalin binding is a perfect option for freeriders who prefer precise downhill control combined with ideal mechanics for short walks to reach untouched paths for a memorable ski experience. Designed together with freeskiers and backcountry skiers, this member of the TYROLIA AAA-Series is designed for ski widths from 80mm and wider. The AAAdrenalin brings paramount freeride performance in every terrain, on every slope.

BINDING TECHNOLOGY | AAADRENALIN

FREERIDE (FR) PRO TOE

The TYROLIA AAAadrenalin comes with the Freeride (FR) Pro Toe with its ergonomic pivot position for optimal tilt up movement up to 90 degrees. This system provides effortless walking over short distances. The FR Pro Toe is adjustable by changing the position of the Anti-Friction-Slider (AFS Metal) to cover alpine and touring boot norms. This 68mm wide slider plus a stainless steel gliding element provide constant release values and result in a broader contact area to the ski boot sole. The benefits: more stability, more direct power transmission and an ultimate skiing performance.

FREERIDE (FR) PRO HEEL

The ultra-wide 80mm heel track makes all the performance difference needed to take this product over the top. Extra width and the superior kinematics of TYROLIA's high performance bindings make it absolutely stable and reliable for perfect force transmission and unmatched performance. The heel can easily be adjusted to different boot sole lengths without any additional tools.

It covers a wide range of seven ski boot sizes. The AAAadrenalin freeride binding is available in two lengths:

SHORT (S) for ski boot sole length of 270-330mm

LONG (L) for ski boot sole length of 300-360mm

The TYROLIA AAAadrenalin comes without brakes. This gives each freerider the chance to choose the precisely fitting brakes in regard to the ski widths.

The AAAadrenalin 16 can be combined with brake widths of 88mm, 97mm, 115mm or 130mm. Brakes with a width of 88mm, 97mm or 115mm can be installed on the AAAadrenalin 13.

◀ 60mm ▶

FREEFLEX

The platform of TYROLIA's AAAadrenalin binding provides the approved TYROLIA Freeflex function which allows the ski to flex as it is designed to do so it can retain its natural dynamics. Freeflex is enabled by the free gliding plate that runs within the titanal heel track and is supported by the center of rotation of the binding toe.

AAA ASCENDER LOCK AND CLIMBING AID

To Access All Areas, transition from skiing to hiking is incredibly fast, easy and convenient. Simply use the tip of the ski pole without stepping out of the binding to move the highly visible Ascender Lock to change between hiking and ski mode. Another TYROLIA feature is the possibility to walk in the 0° position. After release, TYROLIA's climbing aid can easily be operated with a ski pole and it can be positioned in three different angles (0°, 7° and 13°) for an optimal walking position. This improves balance and a secure stand on your way to perfect skiing spots. Additionally, TYROLIA crampons (available as spare parts in three widths: 90mm (ART.N°: 162977 – 1 Pair), 105mm (ART.N°: 162978 – 1 Pair) and 120mm (ART.N°: 162979 – 1 Pair)) can be mounted to improve grip in steep and icy terrain.

Whether skiing downhill or bridging walking paths, the TYROLIA AAAadrenalin gives adventurers an unrivaled combination of skiing performance and all terrain versatility, providing easy **ACCESS TO ALL AREAS**.

ALL COUNTRY

UPHILL AND DOWNHILL PERFORMANCE

The downhill company is now going up, but you don't have to miss the experience of coming back down. In the past a ski designed for going up meant you were sacrificing the experience of coming back down for weight savings on the trip up. However, now you can have a fully capable performance ski with the addition of lightweight materials to experience uphill and downhill freedom.

THE ANSWER TO FREEDOM IS ACCESS TO ALL

HEAD's All Country line is a series of skis with reduced weight core materials, waxable nano tech topsheets to prevent snow from sticking to the surface, as well as a clean approachable design. The freedom to choose and enjoy your path, both up and down is just the start of the journey.

BINDING TECHNOLOGY | AAAMBITION

AAAMBITION – THE TOURING NEWCOMER

The brand new TYROLIA AAAmbition Alpine Touring binding is the perfect companion for all Alpine Touring Aficionados so that no terrain remains unattainable. We included every attribute of our high-performance alpine ski bindings in this brand new Alpine Touring binding.

ALPINE TOURING TOE

This newcomer in the ski touring segment features the exclusive TYROLIA Alpine Touring (AT) Toe which can be easily adjusted to alpine and touring boot norms.

A 65mm wide mechanical AFS gliding element secures constant release values also with rubber soles. In combination with two rollers this binding provides superior safety features with the rapid and exact boot re-centering that skiers expect from TYROLIA. As a result of its harmonious design, the TYROLIA AAAmbition has a wider contact area which improves stability and provides a secure foundation for every skiing situation.

Furthermore, its pivot is efficiently positioned right below the ski boot tip to ensure perfect force transmission and a tilt up to 90 degree.

BINDING TECHNOLOGY | AAAMBITION

ONE-FOR-ALL EASY ADJUSTABLE TELESCOPIC TUBE

Additionally the AAAmbition features a unique light-weight telescopic tube which offers an easy adjustment opportunity to different boot sole lengths. Thus, with only one binding model it is possible to cover the entire range of different sole lengths – from 260mm up to 350mm. Furthermore, with the setting of the telescopic tube and through the compact mounting, perfect binding positioning on your skis is improved and mid-point deviation is avoided.

BRAKES & INDIVIDUALITY

Considering the different ski widths, the TYROLIA AAAmbition comes without brakes. This gives you the opportunity to either choose the perfect fitting brake out of three different widths (85 mm/105 mm/125 mm) or simply to ride and hike without brakes using appropriate powder straps.

DEMO AND RENTAL SUITABLE

In order to offer ambitious sportsmen an opportunity to widen their horizons, the TYROLIA AAAmbition is also demo and rental suitable.

Combined with a spare demo track, this brand new TYROLIA binding can be tested and shown to a broad audience.

Only two easy adjustments (one on the telescopic tube and one on the demo track) are required to fit to different boot lengths without extra drilling.

To sum up: The new TYROLIA AAAmbition Alpine Touring binding is what every ski touring fanatic was looking for. On one hand it offers freedom and individual adjustment possibilities and on the other hand it provides the premium high-end performance that is expected from TYROLIA. The solid, light-weight construction and its maximum functionality enhances the ultimate mountain experience for ambitious climbers as well as for touring newbies. Overcome boundaries - Simply just: **ACCESS ALL AREAS!**

ALPINE TOURING HEEL AND CLIMBING AID

The newly designed climbing aid is positioned as close as possible to the Alpine Touring (AT) Heel. This provides better walking balance and effortless climbing in all situations. The low stand height of 38mm improves stability and offers a confident stance.

With four different climbing aid positions (climbing in a 0°, 5°, 10° or 15° position) it is possible to adapt on different terrains without stepping out of the binding.

It does not matter if it is a walk through flat terrain or a steep slope up to the summit. Simply use the ski pole in order to change the climbing aid position and also to lock for the downhill ride.

Additional crampons are available as spare parts in widths of 90 mm, 105 mm and 120 mm, and provide safe climbing and a secure stand in any situation.

- 90mm: ART.N°: 163006 (1 Pair)
- 105mm: ART.N°: 163007 (1 Pair)
- 120mm : ART.N°: 163008 (1 Pair)

TYROLIA FREEFLEX

The TYROLIA approved Freeflex System, which interacts with the AT Toe, the telescopic tube and the AT Heel, offers natural dynamics, excellent downhill performance and therefore a supreme ski touring experience.

SKI TECHNOLOGY | PARK & PIPE

PNP ROCKER

Park and Pipe Rocker incorporates very subtle tip and tail rise with regular camber construction underfoot. PNP Rocker provides a rider a smoother turn initiation as well as reduced edge contact to seamlessly butter into tricks and initiate spins. With 30% rocker and 70% camber, the ski will perform like an all mountain carving ski, yet pop onto rails and boxes with ease with a stiff construction and substantial rebound effectiveness.

BINDING TECHNOLOGY | AAATTACK

AAATTACK – ASTONISHING PARK & PIPE ACTION

Freeskiers prefer equipment which provides control, performance and usability. Not only for clear slopes and untracked powder areas, also for stoked park and half pipe rides. The new AAAttack binding by TYROLIA combines functionality and modern design to meet these demands. A perfect tool for all-around skiers who are willing to attack!

MODERN ARCHITECTURE

The special Freeride (FR) Pro Toe with its horizontal spring reflects the modern architecture of the new TYROLIA AAA-Series. Furthermore, it includes a super secure 77 mm metal friction device (AFD Metal), which can be adjusted for all types of alpine boots (Type A only).

The AAAttack 16 features the TYROLIA Race Pro Heel, with a reduced stand height of only 17 mm for the ultimate freeski adventure.

PERFECT INDIVIDUALITY

The built in AAA-Series technology ensures high quality and perfect usability. In regard to its clear design and its compact measurement, the AAAttack model can be ideally used on ski widths from 80 mm and wider. TYROLIA's brand new designed AAAttack binding is available in two different DIN settings (16 and 13). The AAAttack 13 features a solid construction, reduced weight and a new designed heel, which brings this model to a new level. Some models are delivered without brakes.

This gives riders the opportunity to customize the setup to their needs. Brakes are available in different widths: 88 mm, 97 mm, 115 mm, 130 mm and 150 mm.

DEMO & RENTAL SUITABLE

The AAAttack 13LT model, a demo and rental version with the proven TYROLIA Sympro Heel track, offers the opportunity for easy adjustment to fulfill customer's desires and to adapt to the wide range of different sole lengths. It comes in two lengths: Short (S) (sole range from 260 mm – 320 mm) and Long (L) (sole range from 300 mm – 360 mm). Both tracks come with the binding, with the long track pre-mounted.

Attack the track with this brand new TYROLIA freeski binding! Overcome boundaries – simply just: **ACCESS ALL AREAS!**

BAG TECHNOLOGY | ABS®

ABS® TWINBAG FOR LIFE

A QUICK TUG ON THE ABS® TWINBAG'S ACTIVATION HANDLE IS ALL IT TAKES TO INSTANTLY INFLATE TWO AIRBAGS WITH A TOTAL VOLUME OF 170 LITERS. THIS EXTRA VOLUME WILL ALMOST CERTAINLY PREVENT THE WEARER FROM BEING BURIED IN AN AVALANCHE.

Two separate airbag chambers make the ABS® system twice as reliable. If one airbag is damaged during the descent, the other will remain inflated for a sufficient length of time. The wide bearing surface due to laterally placed Twin-Bags stabilizes the body and increases the lifting effect precisely in the critical avalanche run-out zone. Of the 262 persons who activated their ABS® avalanche airbag, 97 % survived and 84 % of those were uninjured.*

* Source: SLF, known and documented avalanche accidents with ABS® avalanche airbags, August 2010.

ABS® COMPATIBLE*

The ABS® Avalanche Airbag is the original self-rescue system – produced and tested by German avalanche experts since 1985. There are also other, wellknown companies that rely on ABS® and have included backpacks in their product range that are compatible with the ABS®-System. This backpack is especially designed to fit onto the Base Unit with integrated ABS® TwinBag system by means of a zip.

* The ABS®-System is not included in delivery.

PEAK FELLOW

With the newly-developed PEAK FELLOW, the HEAD development team has surpassed itself and developed a product that combines all the features you need for a perfect day's skiing or snowboarding. The result is a freeride backpack that provides as much security and functionality as you could ever wish for.

The PEAK FELLOW is the ideal accessory for backcountry use. In addition to storage space for avalanche emergency equipment, including a shovel, a probe and a first-aid kit, the packsack's ABS® compatibility offers yet more safety on insecure terrain. The ABS® system is a TÜV-approved airbag system that can save you from being buried in an avalanche. Pull the handle and the ABS® twin bags are pyrotechnically and pneumatically activated, inflating to full size in a split second. The inflated ABS® twin bags provide additional dynamic lift in a flowing avalanche, and help skiers and snowboarders to stay on top of the avalanche. The separately available ABS® VARIO BASE UNIT can be zipped onto the HEAD PEAK FELLOW packsack in just a few steps.

The removable back protector built into the PEAK FELLOW's carrying compartment is CE EN 1621-2

certified and offers additional impact protection. On the outside of the backpack there are attachments for poles, an ice axe and a helmet. The main compartment provides enough space for anything you can't do without for a long day on the slopes, and closes tight with the help of the water-repellent YKK zipper. Smart storage compartments for a hydration system, tools, a mobile phone and other small items complete the list of features.

Despite its compact outer dimensions, the PEAK FELLOW offers a unique variety of attachments for carrying skis or snowboards. Skis can be attached either one on each side or diagonally. Boards can be mounted across the backpack during trips on the snowmobile, or vertically down the length of the body while climbing on foot.

ART.N°: 374563

WOMEN

**WHEN YOU TURN DOUBT
INTO DETERMINATION.
WHEN A DAY ON THE
MOUNTAIN GIVES YOU
MORE ENERGY THAN YOU
SPEND. WHEN YOUR GEAR
FINALLY MEETS YOUR
ASPIRATIONS.
WHAT'S YOUR LIMIT?**

True love for skiing is unconditional. It's not about flawlessness, prettiness, or prowess. It's about expressing yourself, not impressing others. Faith moves mountains, confidence skis them – from daybreak until nightfall. Whatever your line and your limit:

THE RIGHT EQUIPMENT WILL TURN BAD WEATHER INTO GOOD KARMA, TERRIBLE HAIR DAYS INTO BIG AIR DAYS, AND I-DON'T-WANT-TO-RUN-DAYS INTO OUNCES OF PURE, STRIKING GOLD.

JUNIOR

**WHEN YOU MATCH TALENT
WITH TENACITY.
WHEN YOUR STRIDE GROWS
WITH EVERY STEP.
WHEN A DAY WITHOUT
PROGRESS IS A DAY LOST.
WHAT'S YOUR LIMIT?**

No matter how tall you are, you can be great. And like Grandpa said, a trick a day keeps boredom away. Note that the world is yours for the taking. So take your friends with you, laugh at every chance you get, and then take that, too. You'll only regret what you didn't do.

**KEEP YOUR FEET ON THE GROUND, EVEN WHEN YOUR HEAD IS
UPSIDE DOWN IN THE CLOUDS. AND EVERY DAY OF YOUR YOUNG
LIFE, SKI LIKE THERE'S NO TOMORROW.**

SKI TECHNOLOGY | JUNIOR

ERA 2.0

THE LITTLE BROTHER OF ERA 3.0.

It is everything ERA 3.0 has to offer as far as design, performance and geometry integration, but without the addition of "Rebound" with its piezoelectric Intellifibers. While we do want to see kids experience skiing performance at the highest level, they should have the best possible tools to learn and perform.

ETHAN TOO

With inspiration from both Park as well as the Big Mountain skis, this cross over utilizes the same geometric influence as the Cyclic 115 and the Caddy. The combination creates a versatile ski for the junior skier that needs to be ready to ski anything, on any day. Powder all day ever day would be the ultimate dream, but this ski makes the trip back to the base lift feel like the powder never stops.

Well equipped with both TTS as well as TNT Rocker, this twin tip features sandwich construction, highly transparent UHM bases, Tuffwall sidewalls, and a combination of progressive designs taken from The Flight Series as well as the Freestyle skis for the future of skiing.

BINDING TECHNOLOGY | SX JUNIOR/SX KID

SX JUNIOR/SX KID TECHNOLOGY

ONLY THE BEST KINEMATICS ARE GOOD ENOUGH FOR OUR JUNIOR SEGMENT.

Aspiring juniors are the future of our sport. This is reason enough to give them the full benefit of state-of-the-art safety and performance features. The 2013/14 SX JUNIOR and SX KID bindings were developed from the ground up to integrate the performance of HEAD kinematics – the leading technology that made our LX and SX bindings so successful. The SX Junior and SX Kid line is available in two designs for DIN 4.5 and DIN 7.5 models.

CENTERED STANCE ON SKI DUE TO FASTER RECENTERING

More power is directed to the ski which enables ski steering with even less effort. Thus, the risk of injuries and accidents is greatly reduced.

SCRATCH RESISTANCE

The majority of our SX junior models are not coated. Colored plastics are used accordingly, to guarantee increased durability and scratch-resistant bindings.

MECHANICAL ANTI FRICTION SLIDER (AFS)

The innovative mechanical AFS Junior automatically adjusts to the boot sole height, compensating A/C standards as well as height differences due to icing up, dirt or boot wear. The lateral movement of the AFS allows the boot to shift out of the binding with practically no additional friction, assuring constant release values.

RENTAL

**WHEN THE ONLY TOOLS
YOU NEED ARE YOUR BARE
HANDS. WHEN YOU HAVE
EVERYBODY'S FAVOURITE
SKI IN STOCK. WHEN YOUR
CUSTOMER IS GONE IN 60
SECONDS.
WHAT'S YOUR LIMIT?**

To buy or not to buy isn't the question: When rental gear performs to World Cup standards and looks like an art gallery – when a rental system minimizes your resources and maximizes both your customers' satisfaction and your re-sale value –

WHEN RENTAL HELPS TO LOWER THE BARRIER OF ENTRY TO THE SPORT AND RAISES THE FREQUENCY OF PEOPLE SKIING, THE BRAVE NEW WORLD OF RENTAL IS NOT A THREAT, BUT A BIG OPPORTUNITY.

HEAD IS FOCUSED

HEAD IS FOCUSED ON PROVIDING THE BEST RENTAL SOLUTION FOR YOUR BUSINESS. WE WILL DRIVE GROWTH FOR YOUR REVENUES, MAXIMIZE YOUR ROI, AND IMPROVE GUEST SATISFACTION.

Always in the forefront, HEAD revolutionized ski rental operations in 2006 with the BYS Rental System to deliver significant time and revenue savings for high volume rental operators and for **2013-14 HEAD CONTINUES THE EVOLUTION IN THE RENTAL BUSINESS, WITH A NEW LIGHT WEIGHT COMPOSITE CORE SKI CONSTRUCTION, A BRAND NEW ERA 2.0 CHILDREN'S SKI AND INTRODUCING THE REVOLUTIONARY 4D SNOWBOARD RENTAL SYSTEM.**

Partnering with HEAD will allow you to improve your bottom line and convert more first-time customers into life-long skiers.

THREE PART GUEST RENTAL EXPERIENCE

1 | SPEED

With the HEAD BYS System for adults and kids, along with the revolutionary 4D Snowboard RENTAL System, you can reduce your rental process time by as much as half and get your guests out riding the slopes faster than ever before.

2 | EFFICIENCY

HEAD BYS skis and HEAD rental snowboards are packed with design innovations that make your rental shop as efficient as possible. From optimized size and shape variations to visibly clear size markings, our gear is built for a fast and efficient process. Our winning rental combination is its blend of innovations, a proprietary fleet calculator, and our expert shop layout and setup help.

3 | COMFORT & PERFORMANCE

From our easy to turn, easy to learn “ERA 3.0” rental skis, 4D Snowboard RENTAL System and “Sanitize. Dock & Dry.” (SD+D) helmets, the HEAD line of rental equipment offers “conformance” for all levels of skiers and riders. To enhance the on-snow experience, we build our gear as lightweight and durable as possible.

HEAD RENTAL SOLUTIONS HELP YOUR BUSINESS BY:

- Improving your market share through targeted marketing and bringing more renters and beginners to your door.
- Reducing your costs through implementing a well-designed rental system and streamlined shop organization.
- Reducing your ski and snowboard purchases by optimizing the mix and the size curve.
- Discussing how preset DIN settings, better training, and rental-specific support is a plus for your risk management.
- Improving the satisfaction of your guests, who spend less time in your shops, feel good about their day on the hill and want to come back again.

LET US SHOW YOU HOW TO MAXIMIZE THE ROI BY INVESTING IN A HEAD RENTAL SOLUTION.

ERA 2.0

ERA 2.0 is everything ERA 3.0 has to offer as far as design, performance and geometry integration, but without the addition of “Rebound” with its piezoelectric Intellifibers. Created to deliver superior steering, increased floatation and tremendous turning radius. The best possible tools to learn and perform.

⊕ EFFORTLESS STEERING

⊕ SOFT SNOW VERSATILITY

20% ROCKER, 80% CAMBER

1 | ALLRIDE ROCKER

FOR SUPERIOR STEERING AND INCREASED FLOATATION.

We place a highly targeted amount of rocker in each model to ensure maximum performance for all ability levels. Steering is easier for all skiers and soft snow versatility is enhanced.

⊕ INSTANT GRIP

⊕ EFFORTLESS TURNING

2 | PROGRESSIVE RADIUS

FOR TREMENDOUS TURNING.

Regular rocker makes skiers place their ski further on edge to have it touch from tip-to-tail. With progressive radius, up to 50% less angulation is needed to enjoy full edge contact.

MORE EDGE ON THE SNOW = MORE EDGE GRIP.

RENTAL SD+D TECHNOLOGY | SANITIZE. DOCK & DRY

SD+D
SANITIZE. DOCK & DRY

SD+D – SANITIZE. DOCK & DRY THE FIRST FULLY-INTEGRATED RENTAL HELMET CONCEPT.

SANITIZE

From rapid drying to complete disinfection of the helmet. The optional integration of the IONIZATION TUBE prevents development of odors and kills germs and bacteria.

HEAD SANITIZER guarantees optimal helmet disinfection – quickly and efficiently.

DOCK

The HEAD SD+D system provides space for up to 108 SD+D helmets per m² of floor space. The modular construction enables optimal adaptation to the individual space and quantity requirements of every client. Extension to the system – from the simple storage solution to the fully-integrated & ventilated HELMET DRYING RACK, is possible at any time.

DRY

Via AIRDOCKS warm air is directed inside of the helmet. The result: minimal drying time for the operator and pleasantly warm helmets for the rental customer. The helmets are stored according to a logical and individually ordered system. Magnetic AIRDOCKS keep the helmets safely in position – this ensures easy and direct access.

ALL HELMETS
OF THE HEAD
VENTOR
RANGE ARE
COMPATIBLE
WITH THE
SD+D SYSTEM.

SD + D

HELMET STORAGE RACK

HEAD has the solution for efficient storage of helmets: the HELMET STORAGE RACK can be adjusted to the space and quantity requirements of the client and provides both space and easy access for up to 324 helmets on a floor space of 3 m².

HELMET STORAGE RACK 150

ART.N°: 375502 for 180 helmets

HELMET STORAGE RACK 200

ART.N°: 375512 for 252 helmets

HELMET STORAGE RACK 240

ART.N°: 375522 for 324 helmets

HELMET DRYING RACK

In addition to the advantages of the HELMET STORAGE RACK, the HELMET DRYING RACK guarantees rapid and effective drying of the helmets via an integrated drying module.

Warm air is directed inside the helmet via the AIRDOCKs and dries the helmets from the inside out, thus reducing drying time to a minimum.

The optional ionization tube integrated directly into the air intake also prevents development of odor in the helmets. Both the HELMET STORAGE RACK and the HELMET DRYING RACK are available in widths of 150 cm, 200 cm and 240 cm as free-standing racks on legs. Existing track systems of the brand MONTANA can be integrated if required.

HELMET DRYING RACK 150

ART.N°: 375532 for 180 helmets

HELMET DRYING RACK 200

ART.N°: 375542 for 252 helmets

HELMET DRYING RACK 240

ART.N°: 375552 for 324 helmets

HELMET WALLDRYER 100

ART.N°: 375532

The helmet WALLDRYER 100 completes the portfolio of the SD+D system; it can hold 60 helmets on only one meter or three feet of wall space. Helmets attached to the system can be automatically dried during storage and an ionization unit is also available as an option. Standard household power supply can be used to operate the

unit on 220V or 110V. This not only makes the smallest version of a full-feature SD+D system an easy step into the system, but it also fulfills the needs of smaller operations. The SD+D HELMET WALLDRYER 100 racks can be used free standing or standing against a wall.

SD + D

RENTAL INTERFACE

ART.N°: 375412

The starting point for the modular HEAD SD+D system. An interface offers space for space-saving and efficient storage of 3 helmets and can be used together with the FLIP CLIP RAIL, HELMET STORAGE & DRYING RACK, and HELMET WALLDRYER.

FLIP CLIP RAIL

Tracks for the simple and individual assembly of the RENTAL INTERFACE. In the 1- or 2-meter version, the FLIP CLIP RAIL offers space for 3 or 6 RENTAL INTERFACES.

LENGTH:

1 meter
2 meter

ART.N°: 375442

ART.N°: 375452

HEAD SANITIZER

ART.N°: 375462

With this easy-to-operate stainless-steel appliance you can disinfect rental shoes and helmets quickly and efficiently.

Three spray jets ensure even distribution of the disinfectant over the whole shoe or helmet for controlled sterilization thereby preventing development of odors. The included table ensures an ideal working height and practical storage space.

HELMETS | SD+D COMPATIBLE

VENTOR PRO R

Fully compatible with the HEAD SD+D system, this helmet caters to all your customers' needs when wearing a helmet. The ADJUSTABLE VENTILATION and our SIZE FIT help to customize the helmet for every weather condition and helmet size. Features like color code integration, or the integrated barcode makes rental operations more efficient. The appealing look of the VENTOR PRO R with two dynamic design options offers you the possibility, to provide your customers not only a protective item, but also a visual highlight.

FEATURES:

- Compatible with SD+D
- Adjustable ventilation
- 2D-Fit system
- Goggle retainer
- Scan-Barcode

VENTOR R

Helmets have become a part of every winter sports participant's standard equipment – and hence a standard product in every rental operation. Our VENTOR series was developed to perfectly address that. The compatibility with HEAD's SD+D system allows to store these helmets in the most efficient and hygienic way. The TOUGH SHELL makes the helmet bulletproof on the outside, the RESPIRO CORE provides THERMAL VENTILATION and caters for a warm and comfortable climate on the inside.

Color codes help you identifying the right size for your customers, whereas the SIZE FIT guarantees the perfect fit when wearing it.

Two design options make it not only another rental product, but an object of desire.

FEATURES:

- Compatible with SD+D
- Adjustable ventilation
- 2D-Fit system
- Goggle retainer
- Scan-Barcode

HELMETS | NON SD + D COMPATIBLE

RENTAL SR

The ABS construction of this color coded helmet makes the RENTAL SR and RENTAL JR a durable and reliable helmet, built to last.

THERMAL VENTILATION conveys warm air and moist out of the helmet and guarantees a comfortable climate in the helmet. For safe and snug fit, we implemented the SIZE FIT ADJUSTER.

PROTECTION

FLEXOR UNIT R SR/JR

Full action needs full protection – our understanding of full protection is the combination of helmet and body protection, so we enhanced our protection portfolio with the FLEXOR series.

The soft SAS-TEC foam perfectly adapts to body shapes, so no one will even feel the protector is there. The implemented color coding system helps identifying the right products quick and easily and assures a perfect fit. The POLYGIENE treatment of the lining prevents bad odors to develop, the TOUGH SKIN outer material ensures durability.

ART.N°: 395453 Senior
ART.N°: 395463 Junior

RENTAL SNOWBOARD TECHNOLOGY | 4DIMENSIONS

2006 WE BROUGHT YOU BYS.
2012 WE BROUGHT YOU SD+D.

2014 WE BRING YOU 4D, AND HENCE TAKE SNOWBOARD RENTALS TO THE NEXT DIMENSION.

HEAD BRINGS YOU 4D – PERFECT SETUP, MOST EFFICIENT.

We face each of our customers individually, cater to their perfect setup when renting equipment. Having a positive experience when riding is the key driver to returning customers, no matter what age, gender, ability level or family situation they are – everyone has very own specific needs, which the HEAD 4D system and its wide product portfolio

addresses. And all of that in even less time. If you had to explain the all new 4D system with one word, it would be: Efficiency. But 4D also stands for functionality, reliability and innovation: It is the first snowboard rental system with integrated color coding for boots, boards AND bindings. The all new 4D system manages it to cater for the perfect

setup for every single customer of yours, and at the same time, being the easiest, quickest & most efficient snowboard rental system on the market. Although the benefits of 4D can only be fully exploited by using 4D compatible products, each product can also be used by itself or combined with non-4D products – thanks to its modular structure.

RENTAL SNOWBOARD TECHNOLOGY | FRAMEWALL

FRAMEWALL

The extraordinary stressing of rental snowboards so far resulted in fast abrasion as far as delamination of top sheets. This problem has been solved with the all new FRAMEWALL. The three-dimensional build of the sidewall covers the boards top sheet and prevents it from chipping and other external hazards, which is resulting in delamination. The FRAMEWALL is the first 360° protector on a snowboard – that stretches the boards durability considerably!

FRAMEWALL

SIDEWALL

SNOWBOARDS

FLOCKA 4D

ART.N°: 337003 FLOCKA 4D+SPEEDDISC
ART.N°: 337053 FLOCKA 4D

One board to rule them all! We took the best of camber and rocker technology to create a board which helps beginners to pick up riding quickly and also supports intermediates and advanced at their next steps.

The all new FRAMEWALL gives the board its characteristic look, protects the board from impact and prevents the top sheet from chipping. Next to that, the innovative sidewall design has a dampening function and hence makes riding smoother and assures even distribution of edge-pressure. Of course, the implemented color coding adapts to the 4D system and makes the rental process quicker than ever! Not to mention the nice design...

FEATURES:

- 4D compatible
- Flocka shape
- FRAMEWALL
- Pro-Rent top sheet
- Poplar woodcore
- Control jacket
- Easy maintenance base

ART.N°: 337353 ROCKA PLUS 4D

Thanks to rocker technology, getting a hang of snowboarding was never easier. But not only beginners enjoy the benefits of the early rise. That shape is perfect for park and back-country as well! What we did was adding an integrated T&T protector to the board to increase durability, plus a nice design that suits the rocker style. Of course, the design adapts to our 4D system. Less time in shops, more time to play.

FEATURES:

- 4D compatible

FEATURES | HELMETS

LIGHT SHELL

We use the LIGHT SHELL for all InMould helmets with polycarbonate outer shells. Here the shock-absorbing EPS foam core is injected directly into the PC shell. The two components bind together and offer perfect protection and a low weight.

RESPIRO CORE

Our new RESPIRO core is used in the helmets of the STIVOT and VENTOR series. This EPS foam core is perforated throughout and this construction ensures a pleasantly ventilated microclimate inside the helmet, coupled with a low weight.

HYBRID SHELL

Our new Hybrid Shell construction combines the advantages of the robust ABS technology with the lightweight In-Mould construction. Thus, we develop lightweight, extremely robust and durable helmets. Hybrid Shell helmets may be constructed slimmer, a fact that adds to the stylish look.

LOWER MICROSHELL

The helmet body is also coated with polycarbonate in order to avoid scratches and dents in the foam.

TWIST STOP GOGGLE RETAINER

The Twist stop goggle retainer will keep the goggles exactly where they belong and avoids any slipping of the straps.

CONSTRUCTION

REMOVABLE BRIM

For some, it is a matter of style – for others, it is a matter of function: the removable brim gives the helmet a cap-like style and serves as a sun, snow or rain protection. The integrated vents ensure that the moisture of the goggles is transported away and that the goggles do not fog up.

TOUGH SHELL

The classic dual construction made up of the ABS outer shell and the shock-absorbing EPS foam core is matchless in terms of longevity and impact strength. For this reason we use this construction for our STIVOT series helmets and for all the helmets in our rental range.

CONEHEAD SANDWICH CORE

The particular, pyramid-like structure of the two-layer foam ensures that shocks are better absorbed and that the impact energy is extensively distributed over the helmet. An innovative construction by means of which we brake the mold in the design of winter sports helmets.

MONO CORE

In case of the In-Mould technology, the shock absorbing inner layer is injected through the hard outer polycarbonate layer creating a coherent whole. This provides perfect protection while still featuring a reduced weight.

VENTILATION

ADJUSTABLE DUAL ZONE VENTILATION

The ventilation in the two air ducts may be optimally adjusted independently from each other by means of two slide controls at the front and back side of the helmet.

ADJUSTABLE VENTILATION

The opening of the ventilation ducts on the top of the helmet may be adjusted continuously by means of a slide control.

THERMAL VENTILATION

Thermal Ventilation is our automatic ventilation system which leads warm air away from the head to the outside without allowing any cold air to the inside.

LINING

BEANIE LINER

The soft Microfleece material of the Beanie Liner adapts perfectly to the head and thus avoids any bruises and the unpleasant entering of cold air. Molded-in mesh zones let heat and moisture escape to the outside and, together with the ventilation system, ensure a pleasant head climate.

WOMEN SPECIFIC BEANIE LINER

Women have a different head shape than men. This is why we developed a Beanie Liner for women which is exactly adapted to the anatomy of the female head. This was achieved by means of two differently thick padding zones made of soft Microfleece.

INTEGRATED LINER WINDSHIELD

If it is very cold or stormy, the forehead above the goggles may be exposed to extreme temperatures. The liner windshield integrated in the Beanie Liner may simply be folded down if required and will thus close the gap between helmet and goggles. A small feature with great effect.

VENT DAMS

On cold days on the slope, the vents of the Thermal Ventilation may easily be closed by means of the Vent Dams.

AUDIO SOLUTION WITH VOLUME CONTROL

Our audio-helmets are equipped with high-quality earphones in the soft ear pads. The volume control integrated in the earphone cable provides for easy handling.

AGION™ ANTIMICROBIAL LINING

We use an antimicrobial Agion™ material for our liners. The combination of disinfecting silver ions and a preceramic coating makes the surface antimicrobial and the helmet remains odorless.

PERFORATED SOFT MICROFLEECE

The soft Microfleece material has two functions: it feels pleasant on the skin, absorbs moisture and transports it away from the head.

SOFT VELVET

A soft and at the same time durable material which absorbs the moisture and thus keeps the head dry.

FEATURES | HELMETS & PROTECTION

EARPADS/NECK

HEIGHT ADJUSTABLE EARPADS

Due to the fact that not all people have their ears at the same height, we developed a patented system for the height adjustment of the ear pads. This system guarantees an optimal hearing and perfect fit of the helmet. Of course you can completely remove our ear pads including Neckgator on warm days or for cleaning purposes.

3D FIT

Head 3D Fit allows an exact horizontal as well as vertical adjustment of the helmet to the shape of your head.

2D FIT

The size adjustment system may be varied horizontally in order to individually adjust the helmet to your head.

FITTING HELMET/BODY PROTECTION

FIND THE RIGHT SIZE

Measure your head circumference with a tape measure which you apply above your ears. You will find the correct helmet size for your head circumference in the table below.

PUTTING ON THE HELMET AND ADJUSTING THE CHIN STRAPS

The helmet shall sit tightly on your head directly above your eyebrows. Adjust the two chin straps so that they solidly fix and hold the helmet.

CHECK FIT WITH GOGGLES

In order to check the perfect fit of the helmet, please put on your goggles. There should be no gap at all or an only small gap between the upper edge of your goggles and the helmet.

BACK PROTECTOR

A back protector may only provide you with full protection if you have chosen the correct size and adjusted it to your body.

ADJUST THE PROTECTOR

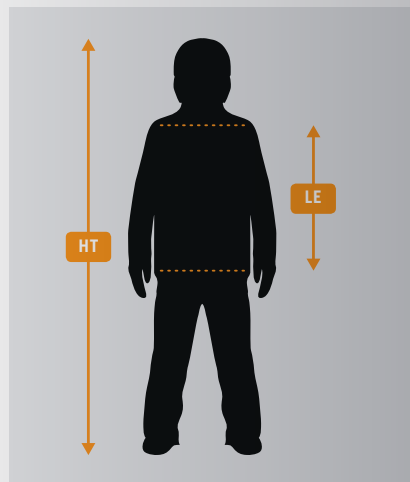

Apply the protector and tighten the straps. The protector shall sit tight against the body without limiting the freedom of movement.

FEATURE DESCRIPTIONS | SKIS

AIRCOAT SUPERLIGHT TWINTIP CONSTRUCTION: For kids who want to spin their first 7, we found the perfect fiberglass for catching air - Aircoat. This twin tip construction is designed specifically for the lighter weight skier to become the skier of tomorrow.

ALLRIDE ROCKER: Rocker that is equally at home on bulletproof snow as it is in powder. This profile uses early rise in the tip with regular camber throughout the rest of the ski. 20% rocker - 80% camber.

DIECUT UHM C BASE: This durable workhorse base material is dedicated to all country skiing. Diecuts are added for flare.

DIFFUSOR: Ridges in the tail of tail of our skis that direct skis that direct energy to the end of the ski. Like the diffuser on cars, this sticks the ski into the snow at the end of the turn and boosts skiers all over the mountain.

E BASE BLACK: Basic black never goes out of style, and it's always durable. Easy gliding is everyone's friend.

ERA 2.0: ERA 2.0 is the little brother of ERA 3.0 and is everything 3.0 has to offer as far as design, performance and geometry integration, but without the addition of "Rebound" with its piezoelectric Intellifibers.

ERA 3.0: A masterful blend of three independently important technologies to make the ultimate allcountry skis. **ROCKER + RADIUS + REBOUND = ROCKER DONE RIGHT.**

ERA 3.0 S: "Sports version" of ERA 3.0 with a multifaceted ski designed with race innovation and inspiration, yet now with the addition of Rocker, Radius and Rebound. Totally new skiing experience with 10% rocker and 90% camber.

HIGHLY TRANSPARENT UHM BASE: A high-density, determinedly durable base that allows gorgeous graphic details to shine through. The perfect combination of fashion and function.

INTELLIGENCE™ TECHNOLOGY: Piezoelectric fibers that absorb vibrations at the speed of light. As you ski faster, the Intelligence™ stiffens the ski to increase stability. It adapts to where and how you ski.

INTELLIGENCE™ CHIP TECHNOLOGY: With Intelligence™ Chip Technology the electrical energy produced by the Intellifibers is not just recycled but accumulated and released bit by bit through a pre-programmed chip.

ISS – INDEPENDENT SUSPENSION SYSTEM: Elastomeric vibration killers located in the tip, tail and underfoot. The elastomers quiet the vibrations that are commonly associated with rockered skis. Underfoot, the vibrations are dampened to provide the skier with a smooth ride.

JUNIOR POWER FRAME: A geometric ski shape that provides structural strength to the outer edges of the ski through geometric design, as opposed to altering the core material or density of the ski. Also, for kids it looks cool and feels different than a standard flat ski.

KERS: A computerized piezoelectronic device that stores ski energy and releases it at the end of each turn. In reality, it's a turbo charger for your skis.

METAL POWER TUBES: Premium features for premium skis. Metal power tubes enable a perfect power transmission from edge to edge. Maximum performance and grip right underneath your foot. Just as you want it!

NANO TECH SURFACE: A permeable nonstick surface with similar molecular compounds and structure to that of a skis base material. This allows you to wax and alter the surface with standard ski wax to assure a light-weight nonstick and snow free surface for your trek up.

PNP ROCKER: Very subtle tip and tail rise with regular camber construction underfoot. PNP Rocker provides a rider a smoother turn initiation as well as reduced edge contact to seamlessly butter into tricks and initiate spins. 30% rocker and 70% camber.

POWER CARBON JACKET: A PU injected core that is wrapped in a layer of carbon fibers. This lightweight construction allows for a soft longitudinal flex coupled with a stiff, responsive torsional flex. It delivers an easy-to-use but impressively responsive ski.

POWER SIDEWALL JACKET: An innovation in ski construction that combines the well known fiber jacket construction with ABS sidewalls. A lightweight ski with easy skiing performance including sidewalls for better dampening, shock absorption and edge grip. Performance at its best for its great target group.

RACE STRUCTURED UHM C BASE: The highest quality, fastest base and finish known to man. The technicians who build the skis for our World Cup Rebels use the same material and machines to put this scary fast base and structure into your skis.

RD RACING TOP SHEET: A thinner topsheet material designed to maximize responsiveness. Exclusive to our RD skis.

REBEL CAMBER: Some years ago it was years ago, it was rebellious to have rocker. Now, it's rebellious to have camber. With Rebel Camber, we feature explosive acceleration and excellent edge grip for the World Cup Rebel inside you.

SANDWICH CAP CONSTRUCTION: We take the basic framework from the world cup sandwich and place a cap that just wraps over the top edge of the sidewall to make the ski more suitable for all mountain skiing. Bomber construction with a rounded top edge makes for one incredible allcountry ski.

SANDWICH TWINTIP CONSTRUCTION: We blend a full vertical laminate wood core for durability and add our bomber Independent Suspension System for killing chatter. Pipe, park, big mountains, whatever, bring 'em on and let this construction rip.

STRUCTURED SURFACE: An extra-durable topsheet with a structured exterior. Designed to hold up against the most extreme abuse.

STRUCTURED UHM C BASE: The same high quality material used in HEAD's world-leading race skis is used here. Different structured running base for all conditions.

TNT ROCKER: Tip and tail rocker combined with regular camber underfoot. This combination creates a surfy feel in powder while maintaining hard snow versatility. 40% rocker - 60% camber.

TTS (TIP & TAIL STABILIZER SYSTEM): A ski with reduced vibration and increased dampening and a system to increase torsional strength all while at the same time reducing swing weight.

TUFFWALLS: Impact resistant ABS sidewalls. While maintaining responsiveness, Tuffwalls are designed to take a beating.

TWINTIP CONSTRUCTION: A vertically laminated wood core, surrounded by a sock of fiberglass and covered by a durable topsheet. This forgiving twin tip construction is slightly softer than our sandwich twin tip layout, making it better for learning pipe and park tricks.

UHM C BASE: Our highly durable base material for getting the job done well. Not flashy, but steady and stable. The kind of base that will last for years.

WOOD CORE CAP CONSTRUCTION: A vertically laminated wood core, surrounded by a sock of fiberglass and covered by a durable topsheet. This forgiving construction is slightly softer than our sandwich cap making it ideal for ramping up the learning curve.

WORLD CUP SANDWICH CONSTRUCTION: The basic construction invented by Howard Head in the 1940's, perfected and hand built by the finest ski technicians in the modern world. The vertical laminate wood core is embraced by speedfreak phenolic sidewalls and the finest Titanal. This is the fastest construction on the planet. Period.

FEATURE DESCRIPTIONS | BINDINGS

ABS – ANTI BLOCKING SYSTEM: The exclusive TYROLIA technology of the ABS continuous band allows the boot to move out of the binding almost without any friction, hence delivering maximum safety in case of icing up, dirt and boot wear.

AERO TOE: The Performance Toe which is used in alpine ski racing. Due to higher release forces vertically than horizontally these toes hold up to the high backward lean forces occurring in racing. Our athletes trust in them!

AFS – ANTI FRICTION SLIDER: New weight optimized adapter for gliding insert at Power Bindings for reduced friction, constant release values and maximum safety.

AFS JUNIOR: The innovative mechanical Anti Friction Slider (AFS) automatically adjusts to the boot sole height, compensating A/C standards as well as height differences due to icing up, dirt or boot wear.

AFS METAL: The 68 mm wide slider plus a stainless steel gliding element provides constant release values and results in a broader contact area to the ski boot sole.

AT TOE: The Alpine Touring (AT) Toe can be easily adjusted to alpine and touring boot norms and it secures constant release values also with rubber soles.

BRAKES: HEAD offers brakes with different width for optimal fit on wider skis and fat skis up to 150 mm ski width in the brake area. Some binding models are delivered without brake – “w/o brake” – to avoid brake exchange later on.

CLIMBING AID: The climbing aid with its different climbing positions, which can be operated without stepping out of the binding, provides excellent balance and effortless climbing.

DURA-COATING: Scratch resistant electrostatic powder coating provides environmentally friendly design, optimal durability and a variety of possible colors and color combinations.

FREEFLEX PRO: Best performance enabled by the innovative Freeflex Pro System. The free-gliding heel allows the ski to bend through unimpeded and to retain its natural dynamics. Due to the reduced stand height, the Freeflex band is now much closer to the ski boot. Constant release values reduce the risk of injury and ensure safe ski steering.

FR PRO TOE: The Freeride (FR) Pro Toe can be easily adjusted to different boot sole heights. Its horizontal spring reflects the modern architecture of the AAA-Series.

FULL DIAGONAL: Intelligent 180° release both horizontally and vertically of the Diagonal Toe and therefore ensures maximum safety in backward twisting-fall situations.

LIGHT DIAGONAL HEEL: The Light Diagonal Heel provides maximum safety with a 150° release. Thus, pressure on the knee and ligaments upon twisting forward falls and the risk of injury are reduced.

LITERAIL: LiteRail is the ultimate system for both retail and the rental sector as well. LiteRail is demo suitable, high end Rental suitable, season rental suitable and can be used for all flat skis. Due to three different mid parts, LiteRail covers boot sole lengths ranging from 199 to 347 mm. Covering this large mounting range LiteRail is perfectly suited for kids, juniors as well as adults.

LX TOE: The performance oriented LX toe defines stability and power, much as a strong and tough bull would extremely durable and absolutely reliable.

POWERRAIL: The unrivalled technology for retail, demo & rental by the well-received rail system on a modular basis provides easiest handling, maximum flexibility, optimized performance, perfect match, more stability and durability.

RACE DIAGONAL: Diagonal Toe tuned for racing purposes. Due to its higher release force vertically than horizontally, it holds up to the high backward lean forces in racing.

RACE LITE HEEL: The lighter variant of the Race Pro Heel for young up-and-comers and speed stars of tomorrow.

RACE PRO HEEL: The stand height was reduced according to the actual FIS rules. An increased contact area reduces friction and provides constant forward pressure in all skiing situations.

SL LITE HEEL: Weight optimized toe for junior and light-weight skiers with proven safety features of the HEAD/TYROLIA binding technology.

SOLID COLORED: Solid colored plastic parts are not coated with a separate color layer. Instead, the color has been added to the plastic granulate already. Thus, those parts are absolutely scratch resistant and durable but less color options are available.

SX HEEL: Based on new kinematics the ski boot is precisely secure in the binding. This ensures exact and more direct power transmission from boot to edge.

SX JR. HEEL: The new junior heel with improved kinematics to increase safety and performance for junior skiers.

SX JUNIOR TOE: The innovative kinematics of HEAD's LX and SX adult line provide advantages in performance and stability for the SX Junior line for young speedsters as well.

SX KID HEEL: The SX Kid heel provides the little ones with the best in the latest technologies and safety standards for binding innovation and integrates the new kinematics for the younger set, too. Because safety is paramount, always.

SX KID TOE: With the SX kid toe for up-and-comers and integrated innovative LX/SX kinematics ski steering now requires even less effort.

SX TOE: The kinematic improvements are reflected in the product design of the SX toe as well. With its high cheek bones it reminds of a fox – smart, sly, agile and very clever.

TEFLON WIDE: The wide Teflon® insert ensures better force transmission, more stability and therefore optimal performance.

TELESCOPIC TUBE: With only one binding model it is possible to cover the entire range of different sole lengths (from 260 mm up to 350 mm).

TRP – TYROLIA ROLLER PINCHER SYSTEM: The TYROLIA Roller Pincer Toe System (TRP System) of the HEAD bindings with its four rollers and gliding inserts ensure a 180° release and exact centering of the ski boot. The TRP system reduces the load on knees and ligaments and improves performance considerably.

BASES/PLATES

JUNIOR RACE PLATE 11: It provides an additional stand height of 11mm and covers boot sole lengths from 251-332 mm. Oblong Holes and a two-piece flex system support Freeflex and maintain ski flexibility. It provides increased torsion stability, control and edge grip although being super light. Pre drilled mounting holes make it easier to mount the binding without drilling.

POWERRAIL PRO BASE: The high-end variant, PowerRail Pro, is equipped with an additional Freeflex band which links both toothed areas at the toe and the heel side of the base. Therefore, toe and heel piece can glide on the base unhindered. This additional “Double Freeflex Function” ensures fewer impediments of the natural ski flex, constant release values and better edge grip.

POWERRAIL STANDARD BASE: The standard PowerRail Base consists of a monoblock base body, a cover, and an inlaid toothed area which can be color matched to the ski design. For unhindered natural ski flex, the base is secured by one fixed pair of screws, and three free-gliding pairs of screws. This ensures the base safely adapts to the flex of the ski.

SPEEDFLEX PLATE: The new free gliding speedflex plate provides an additional stand height of 13 mm and the impact on ski flex is greatly reduced. Dampener, oblong holes and the new designed super flex system support Freeflex and maintain ski flexibility. Additional metal brackets provide increased edge grip, torsion stability and control.
