

HEAD[®]

HARDGOODS

WINTER
2014/15

THANK YOU LIMITS.
THANK YOU FOR MAKING ME SET GOALS.
FOR GIVING ME SOMETHING TO STRIVE FOR.
WITHOUT YOU LIMITS, THERE WOULD BE NO
CHALLENGE.
NO TEARS.
NO TRIUMPH.
THANKS TO YOU, I GROW AND PROGRESS.
FORGING NEW PATHS BEYOND THE
BOUNDARIES YOU SET.
YOU FORCE ME TO UNDERSTAND WHO I
REALLY AM,
BY TAUNTING ME TO PUSH MYSELF HARDER.
BECAUSE YOU TRY TO HOLD ME BACK,
I CANNOT BE STOPPED.
WHAT'S YOUR LIMIT?

~~WHAT'S
YOUR
LIMIT?~~

THE MAN WHO LOVED WHAT SKIING COULD BE.

For hundreds of years, ski technology barely changed. Sure, stronger woods made an appearance, camber came onto the scene, and tips and tails got wider, but that was about it. And then one day in 1947, an aeronautical engineer named Howard Head went skiing for the first time. And he was not impressed.

Howard knew there had to be a way to make skis lighter, faster, and more friendly. He set to work for three years, creating one prototype after another, and step by step, the HEAD ski came to life.

With its plywood core, aluminum sheets, plastic sidewalls, and a continuous steel edge, it was a revolution on the slopes. Suddenly anyone could ski and have fun at the same time. And the rest, along with the competition, was history.

BEHIND THE SCENES:

IT'S EASY TO LOOK AT A SKI OR A BOOT AND FORGET ABOUT THE WORK THAT WENT INTO IT.

That's the problem with brilliant engineering: it only makes itself apparent when the ski disappears beneath you. It's the problem with incredible design: a boot can be so sublimely comfortable that you can totally focus on other things – like the finish line. And it's the burden of every athlete – the faster they go, the easier they make it look.

At HEAD, we're inspired by those who push themselves, drive the sport, and create solutions. And if you ever get to visit our headquarters, you may find that we're inspired pretty much all the time – because we're surrounded by those people every day.

So we'd like to take a moment to say thanks to every staff member and all our athletes. Together, you're pushing the industry forward, and inspiring more and more people to put on skis and discover this beautiful sport. And every time we ask you What's your limit? The answer only opens another question, What limit?.

RACE **COMBO**

**WHEN YOU'VE SEEN THE SPEED OF
LIGHT
WHEN YOU LIVE ON THE EDGE
WHEN ADRENALIN IS YOUR ONLY
FUEL
WHEN YOU ARE THE ONLY
OPPONENT TO BEAT**

WHAT'S YOUR LIMIT?

A hundredth of a second isn't the difference between first and second, it's the difference between winning and nothing at all. If you race, you understand. A centimeter is the grandest of canyons, and there's no such thing as fast enough. But thanks to our athletes and their insatiable demand for more speed, better speed, and faster speed, we're all going a lot quicker. This is trickle-down technology at its finest. Though anything that fast could hardly be called a trickle.

WHEN YOU'VE SEEN THE SPEED OF LIGHT

PERFORMANCE COMBO

**WHEN SLOWING DOWN IS A WASTE
OF TIME
WHEN YOU LIVE LIFE TO THE FULLEST
SPEED
WHEN YOU TURN FEAR INTO
TENACITY
WHEN YOU ARE USED TO USING THE
FAST LANE**

WHAT'S YOUR LIMIT?

Winter can't come fast enough and never lasts long enough. Likewise, no run is fast enough or lasts long enough. But with snow on the ground and the right equipment at your feet (and everywhere else), there is bliss around each turn, and satisfaction at the end of every run. And during those magical, powdery months, there is no limit to how hard we will push ourselves to make the most of every moment. Is it winter yet? How about now?

WHEN SLOWING DOWN IS A WASTE OF TIME

ALLRIDE COMBO

**WHEN YOU ENJOY EVERY
TERRAIN
WHEN THE IDEALS ARE THE ONLY
THING YOU FOLLOW
WHEN YOU LOOK BEYOND THE
HORIZON AND THEN GO TO SKI THERE
WHEN FOCUS CONQUERS FEAR**

WHAT'S YOUR LIMIT?

Specialization is the mother of progress. Every season, specialized freeriders are going bigger and specialized racers are going faster on specialized equipment and specialized terrain. On the other hand, specialization kills freedom. The freedom to decide in the middle of the chair lift ride, whether you're going to race down the front or freeride down the back of the mountain. The freedom to pull out of a multiple-G-turn and veer to the left into a virgin couloir. The freedom to go for one last full speed run on twilight ice as the sun sets behind the peaks you've ridden.

WHEN YOU ENJOY EVERY TERRAIN

FREESKI COMBO

**WHEN YOU GET OUT OF LINE TO FIND
YOUR OWN
WHEN YOU SKI WHAT OTHERS
GOOGLE
WHEN YOU'RE SLAVE ONLY TO
FREEDOM
WHEN TIME STOPS WHILE YOU FLY**

WHAT'S YOUR LIMIT?

There is a mindset that fits into the crowd, follows the path, and stays in the box. And then there's the personality who dies for the challenge and lives for freedom. Those who see skiing as a test of skill, and sometimes of fate. Or as the ultimate form of expression. In man-made, in natural, and sometimes super-natural terrain. Freeriding and freestyle are brothers from different mothers. So is their attitude. And so is our equipment.

WHEN YOU GET OUT OF LINE TO FIND YOUR OWN

WOMEN COMBO

**WHEN EVERY TURN BRINGS
A SMILE OF JOY
WHEN YOU FIND THE PERFECT LINE
WHEN YOUR GEAR FINALLY MEETS
YOUR ASPIRATIONS
WHEN YOU TURN BAD
WEATHER INTO GOOD KARMA**

WHAT'S YOUR LIMIT?

True love for skiing is unconditional. It's not about flawlessness, prettiness, or prowess. It's about expressing yourself, not impressing others. Faith moves mountains, confidence skis them – from daybreak until nightfall. Whatever your line and your limit: The right equipment will turn bad weather into good karma, terrible hair days into big air days, and I-don't want-to-run-days into ounces of pure, striking gold.

WHEN YOU FIND THE PERFECT LINE

JUNIOR COMBO

**WHEN YOU MATCH TALENT WITH
TENACITY
WHEN YOUR STRIDE GROWS WITH
EVERY STEP
WHEN SPEED MEETS SWEET
WHEN YOU TEACH YOUR
PARENTS**

WHAT'S YOUR LIMIT?

The concept of being «in the moment» is something only grown-ups strive for. Because when you're young, there simply is no other state. Here and now is everything that counts. This jump. That turn. This achievement. But also this pain. This cold. This fear. Kids are instant and fierce judges of the quality of their equipment. When it doesn't work, before you know it, the entire family is back in the car and on their way home. Getting it right is paramount. To us. For you. Their parents.

WHEN YOU MATCH TALENT WITH TENACITY

WOMEN'S SKI ARCHITECTURE

At the heart of the Libra, Women's Ski Architecture, is GRAPHENE™. GRAPHENE™ is the first crystal that is two dimensional, giving the material a unique set of properties. It is the thinnest and lightest element ever discovered by mankind. GRAPHENE™ is also the strongest material on the planet, stronger than diamond and 300 times stronger than steel, all in the thickness of one atom. GRAPHENE™ is at the center of the new JOY collection, outstanding lightness with a perfectly balanced ski and always in complete control.

SKIS

Lightness

Balance

Control

Light done right.

Lightness

THANKS TO THE LATEST SUPER LITE AND SUPER STRONG MATERIALS

20% LESS WEIGHT

True to HEAD's DNA, we remain on the forefront of ski technology. And now we are incredibly proud to introduce **GRAPHENE™** – an incomparably light and unbelievably strong material. Layers of **GRAPHENE™**, only a single atom thick, combine to make skis that flex and react intuitively to even the smallest inputs. When mixed with other lightweight materials like **Koroyd™** and carbon, **GRAPHENE™** enables weight savings of up to 350 grams.

Balance

TROUGH UNIQUE WEIGHT DISTRIBUTION PROFILES

With **GRAPHENE™** we are able to manipulate the geometric profile and weight distribution of the ski in any way we like. Depending on the nature of the ski model, the type of skier, and the expected snow conditions, we fine-tune weight and flex distribution characteristics to optimize the skiing experience. Never before has a ski been more perfectly balanced or more efficient – in every model of the size run. In our new women's line, each ski's weight distribution is set up for one of two categories: "on-piste" and "off-piste".

Control

WITH WOMEN'S CAMBER AND ERA 3.0

Thanks to **GRAPHENE™**, our women's camber has a lower profile, which makes for easy turn completion and truly epic performance. And because the handling of the ERA 3.0 Rocker has been enhanced, it's not just the turns that are easier to execute – even changes from edge to edge are effortless. With **GRAPHENE™** you always have grip and control – in every situation, through all conditions, with every move you make.

SKI TECHNOLOGY | FRAMEWALL

FRAMEWALL

The extraordinary stressing of Park&Pipe skis generally result in fast abrasion and easy chipping of the top sheet. This problem has been solved by the all new FRAMEWALL. The three dimensional build of the sidewalls covers the skis top sheet and prevents it from chipping and other external hazards, which results in delamination. The FRAMEWALL is the first 360 protector on a ski, that increases the skis durability and performance considerably!

TRIFLEX TECHNOLOGY

HEAD TRI Flex base

For the first time a FreeFlex System, is integrated in a newly designed base system, the HEAD TriFlex base. For unhindered natural ski flex, the base is secured by one fixed pair of screws and three special gliding devices. This offers multiple flexing opportu-

nities to the front, to the rear and on the base, allowing the ski to retain its natural flexibility and dynamics. The Dynamic Rebound System – DRS with its two power-springs, enforces the inherent ski rebound and allows faster edge-to-edge transition, with more powerful and agile skiing at the highest level.

SUPERLITERAIL – SLR BASE

The new SuperLiteRail base has a wide contact interface on the ski – 30 % wider than the LiteRail. In combination with the integrated Freeflex-Function the SLR base guarantees constant force distribution which leads to flawless control and performance, without affecting the natural ski flex.

SKI TECHNOLOGY I KERS

THE EXTRA BOOST

KERS Technology works like a turbo charger that provides additional power and acceleration by stiffening the tail of the ski in outturns.

The effect: a boost, catapulting the rider into the next turn. Just like when Formula 1 pilots push a button for that extra notch of Speed. HEAD KERS Technology is an electronic, fully automatic and integrated system.

TECHNICAL BACKGROUND

HEAD KERS Technology is an evolution of the idea behind HEAD's Intelligence™ Technology. But unlike Intelligence™, KERS does not influence the torsional stiffness of the ski, KERS empowers the skis' longitudinal flex. Also KERS Technology is based on a completely new chip capable of accumulating power and keeping it in store for the right moment. Piezoelectric fibers transform kinetic energy into electrical energy which is stored in the embedded chip in the ski. Electrical energy is immediately released to areas of the ski, where additional energy is requested by the sensor. Timing and release are automatically controlled and coordinated. Depending on the flex pattern of different ski models, sensors are programmed beforehand: the more aggressive the ski has to be, the stiffer the tail will become.

Skis experience maximum flex at the end of a turn. At this moment an active microchip releases energy into the fibers of the tail. The tail of the ski then stiffens up, immediately increasing rebound for maximum acceleration at the end of the outturn.

ELECTRONIC SKI MANAGEMENT SYSTEM

HEAD's theory of relativity: Ski performance is not an absolute measure. What you want out of a ski always depends on how and where you ride. On hard-packed slopes you want perfect edge grip. On soft snow, you want more maneuverability. Breaking the slope record you want your ski to perform differently than when you're just cruising with your friends or family. Adaptive HEAD Intelligence™ Technology helps your ski perform perfectly – both relative to terrain and your individual riding mode.

HOW IT WORKS

Intellifibers positioned at 45° in front of the binding transform mechanical impulses into electrical energy. The harder you ride, the more energy is produced. The electrical energy is led back to the Intellifibers. This causes them to stiffen up, putting more rebound and torsional stiffness into the ski.

WHAT IT DOES

Their 45° position in front of the binding increases the ski's torsional stiffness, pushing the edge into the snow in hard turns. Intelligence™ progressively stabilizes the entire ski at high speeds.

THE EXTRA BOOST

Some HEAD high-end skis boast Intelligence™ Chip Technology. Here, the electrical energy produced by the Intellifibers is not just recycled, but accumulated and released bit by bit through a pre-programmed chip – individually timed to match the oscillation properties of the ski. Thus, the effect of Intelligence™ is multiplied, providing even more performance relative to your skiing style.

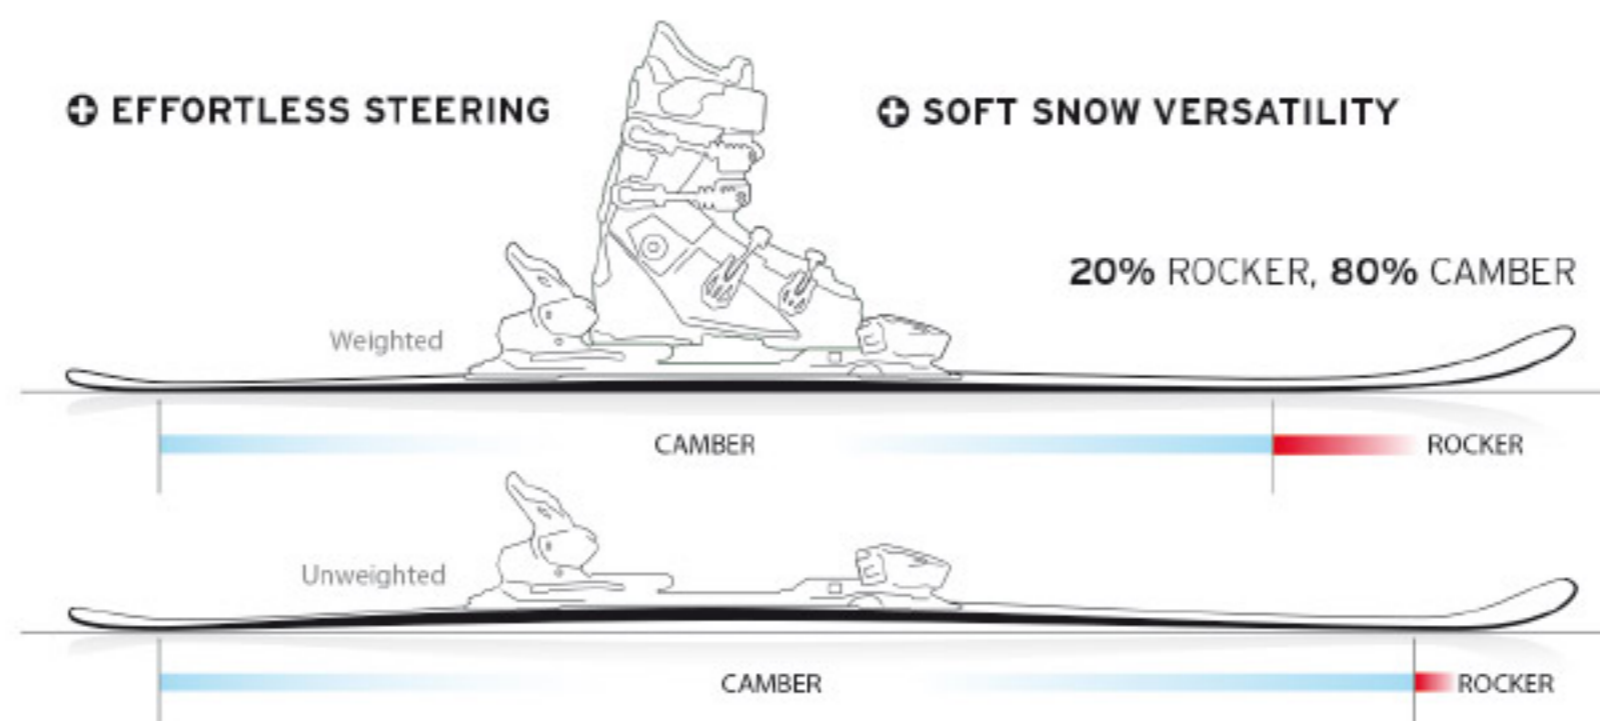

BIG MOUNTAIN SKIS WITH BEYOND RACE TECHNOLOGY

TTS – TIP AND TAIL STABILIZER SYSTEM. A SKI WITH REDUCED VIBRATION AND INCREASED DAMPENING AND A SYSTEM TO INCREASE TORSIONAL STRENGTH ALL WHILE AT THE SAME TIME REDUCING SWING WEIGHT.

TTS is a stabilizing exoskeleton which dampens the vibrations normally felt from rockered tips and tails also reduces overall swing weight and creates a ski with a playful yet high level of performance. The system is comprised of an elastomeric inlay for vibration control as well as a glass fibre exoskeleton for stability and torsional strength. This combination not only reduces vibrations but creates better pressure distribution upon entry and exit of a turn by minimizing lateral flex of the ski. Reducing overall vibration means better edge control and therefore increasing overall skiing performance and skier experience. In addition, the reduction of necessary core materials in the tips and tails has created a lighter swing weight for easier handling and maneuverability both on snow and in the air.

Rocker done right.

01

ALLRIDE ROCKER

A rocker who feels comfortable on the steepest slopes and deepest pow - made for skiers who feel comfortable on steepest slopes and deepest pow, and who are always ready to make the best out of every single skiing day. Allride Rocker enables superior steering and increased floatation. We place exactly the right amount of rocker in each model to ensure maximum performance for all ability levels. Steering is easier for all skiers and soft snow versatility is enhanced.

02

PNP ROCKER

Some people want to fly high - If you're one of them, be sure your ski features the PNP Rocker. Consider it a pair of wings for skis, developed in the HEAD freestyle laboratory. Our Park & Pipe Rocker incorporates tip and tail rise with regular camber underfoot. PNP gives skis a significant amount of pop and energy for boosting tricks. So dive in, go bigger, fly further, and rock the park and pipe as hard as you can.

03

SPEED ROCKER

For perfect handling on hardpack - a slight tip rise on a ski with standard camber, which means great performance, easy turn initiation, and high versatility on soft snow. 10% rocker and 90% camber is just enough to take the sting out of the edges, while keeping the bite you need to turn. Speed Rocker turns HEAD performance skis into a weapon of speed with power steering. It's fast. Are you?

04

TNT ROCKER

For more powerful freeriding - Tip & Tail Rise meet partial camber: The recipe for great float and freedom in powder with enough standing power to enjoy those days you didn't pray for snow. Really the best of both worlds. 40% Rocker is radical enough to satisfy the freeridin' soul. 60% Camber helps keep your speed and your budget in check - because with the versatility of TNT rocker, you'll have to buy one less ski for your quiver.

05

JUNIOR ROCKER

For perfect allride performance. Kids don't like compromises. But they don't like sticking to decisions either. One day they're a rockstar. And the next day they want to be a bunny. With 20% rocker and 80% camber, kids get tons of float, easy turn initiation, and plenty of speed and control. HEAD's Junior Rocker simply works for anyone, anywhere.

SKIS TECHNOLOGY ERA 3.0

era3.0
EVOLUTIONARY
ROCKER ARCHITECTURE

ERA 3.0

Imagine a ski that performs for everyone, anywhere: One for all. All in one. HEAD ERA 3.0 is not your one-dimensional «Have a problem? We fix it!» technology. ERA 3.0 is a combination of technologies, shape and geometry. Think Rocker, think Radius, think Rebound. Think 3-dimensional.

ALLRIDE ROCKER

For superior steering and increased floatation. We place a highly targeted amount of rocker in each model to ensure maximum performance for all ability levels. Steering is easier for all skiers and soft snow versatility is enhanced.

PROGRESSIVE RADIUS

For tremendous turning. Regular rocker makes skiers place their ski further on edge to have it touch from tip-to-tail. With progressive radius, up to 50% less angulation is needed to enjoy full edge contact. More edge on the snow = more edge grip.

INTELLIRISE REBOUND

For targeted stability. We move our legendary piezoelectric Intellifibers to the tip of the ski. The nasty tip vibrations found on regular rockers are not found here. These skis are too smart for that.

ERA 3.0 S

The Supershape line was called the Supershape because from its inception it was shaped to perfection. Now, the Supershape has taken on ERA 3.0 S.

It's the sports version with a multifaceted ski designed with race innovation and inspiration, yet now with

the addition of Rocker, Radius and Rebound. With a totally unique V-Shape construction this is not just a new ski, it is a totally new skiing experience. The new Supershape with ERA 3.0 S is the combination of all mountain carving, race technology,

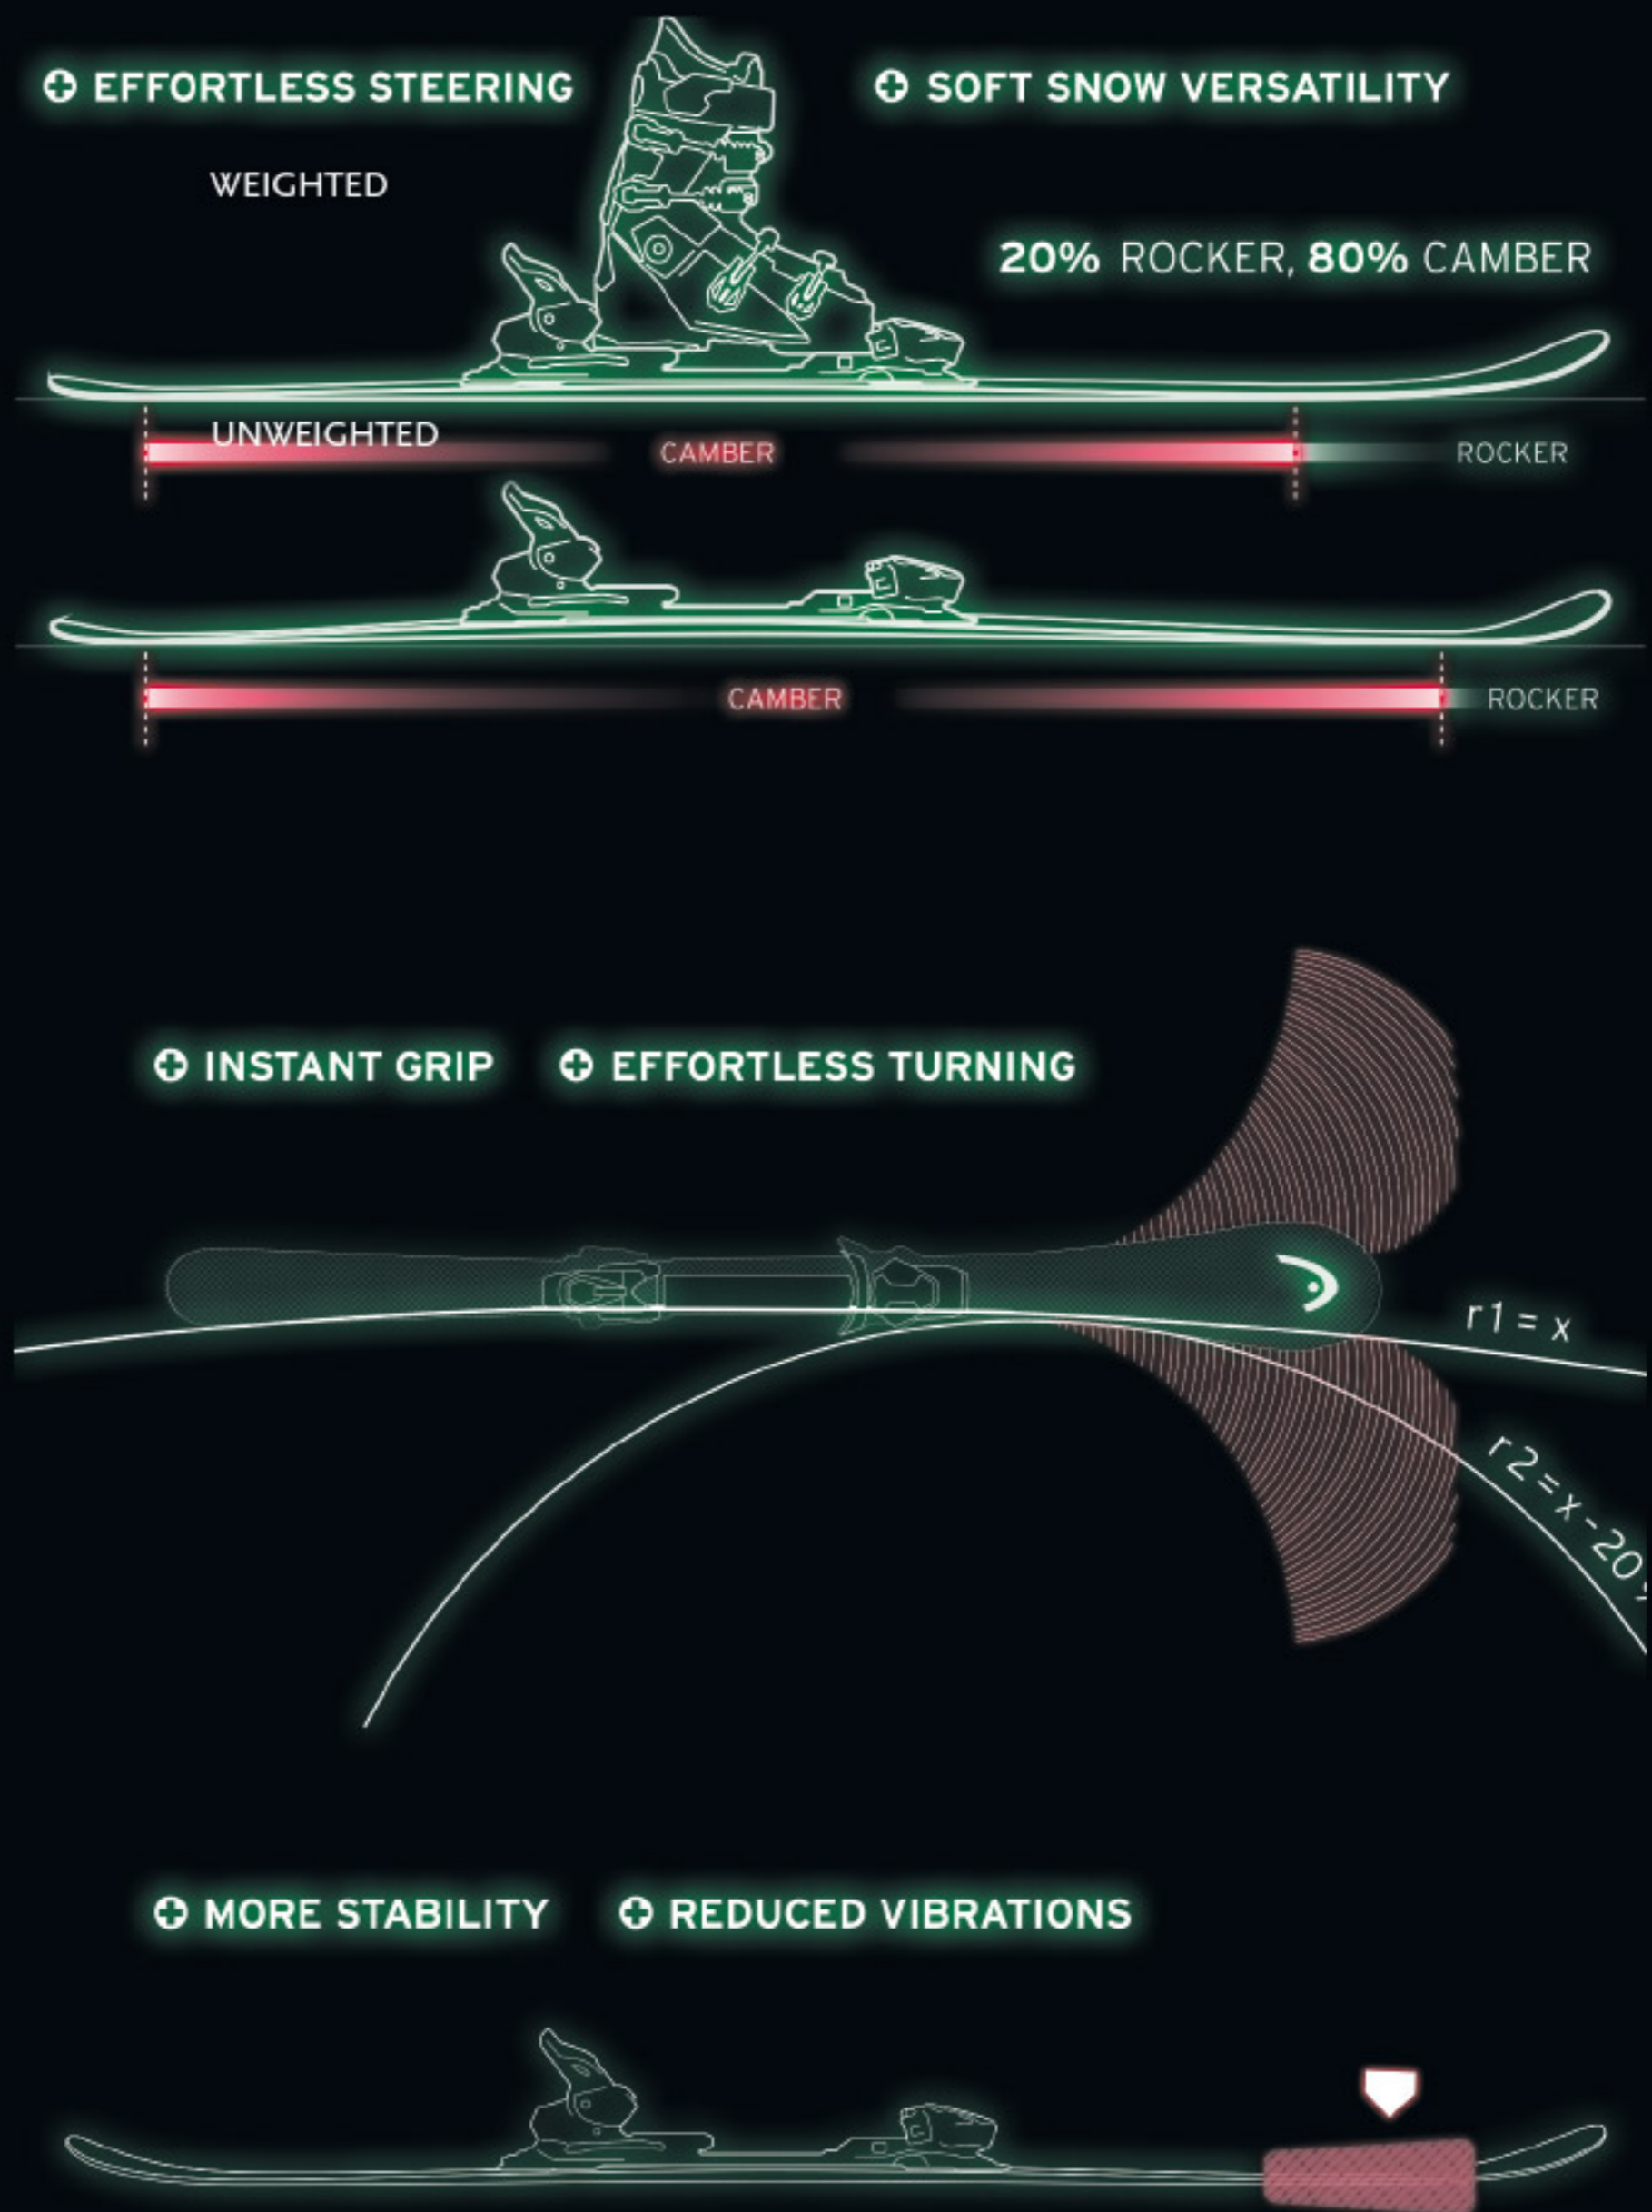

and a new gradient on turning mechanics and ski capabilities sure to impress skiers on many levels. 10% Rocker and 90% camber are combined to impress. The additional layer of Intellifibers provides explosive power, control and increased responsiveness.

ERA 2.0

THE LITTLE BROTHER OF ERA 3.0. It is everything ERA 3.0 has to offer as far as design, performance and geometry integration,

but without the addition of "Rebound" with its piezoelectric Intellifibers. While we do want to see kids experience skiing performance at the

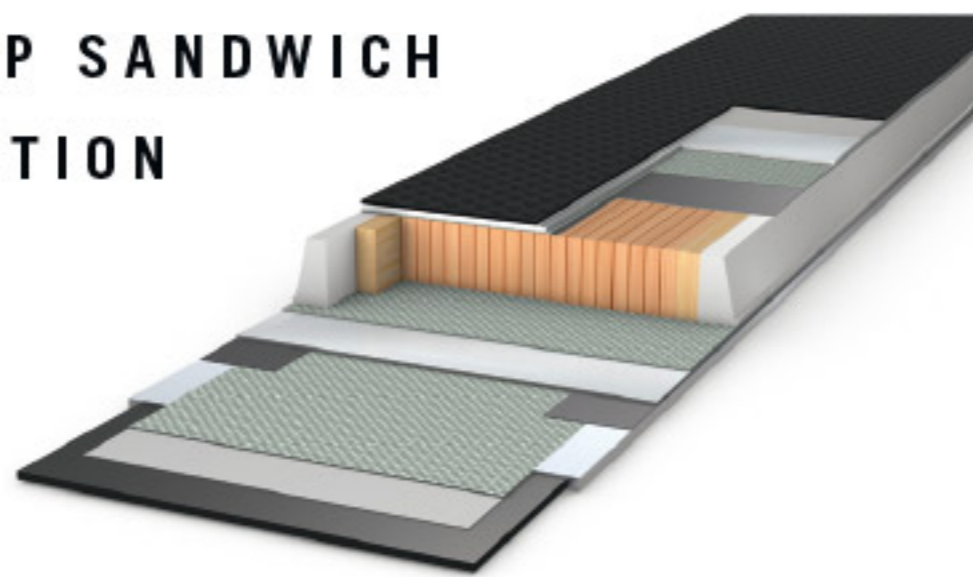

highest level, they should have the best possible tools to learn and perform.

era 2.0

SKIS TECHNOLOGY | HEAD CORE

WORLD CUP SANDWICH CONSTRUCTION

Hand built by the finest ski technicians in the modern world. The vertical laminate wood core is embraced by speedfreak phenolic sidewalls and the finest Titanal. This is the fastest construction on the planet.

WC SANDWICH CAP CONSTRUCTION

A wood core sandwich construction with Titanal which combines the solid and responsive performance of the vertically laminated wood core and control offered by the Titanal. Upper layer wrapped by Cap that insures longer durability.

WOOD CORE CAP CONSTRUCTION

A vertically laminated wood core surrounded by a sock of fiberglass and the whole body is wrapped by a durable topsheet. This forgiving construction is ideal for ramping up the learning curve.

SANDWICH CAP CONSTRUCTION

Is the world cup sandwich construction with a cap that wraps over the top edge of the sidewall to make the ski more suitable for all mountain skiing.

WOOD COMPOSITE CORE

A vertically laminated wood core with a PU injected sock around it. The Cap constructions insures complete protection from mechanical damage. The wood insures stability against vibrations and a smooth ride for target groups looking for entry performance.

POWER SIDEWALL JACKET

A synthetic injected core supported with ABS sidewalls. This lightweight construction allows for a soft longitudinal flex coupled with a super responsive torsional flex, thanks to the sidewall jacket.

POWER CARBON JACKET

A synthetic core center wrapped by Carbon fibers. Delivers a performance ski that can be used by entry level skiers.

SKIS TECHNOLOGY | WOMAN SPECIFIC CORES

GKC SUPERLITE SANDWICH CAP CONSTRUCTION

Developed with the most sophisticated material known to man, the Superlite sandwich construction uses GRAPHENE, KOROYD and CARBON to guarantee the lightest ski in the world without compromising on performance. The ultimate construction for a high performing women ski.

- | | | |
|-----------------------------|---------------------------------|--------------------|
| 1 Top Sheet | 2 Reinforced glass fiber | 3 GRAPHENE™ |
| 4 Carbon glass fiber | 5 Koroyd | 6 Wood core |
| 7 Sidewall | 8 Dampening Layer | 9 Edge |
| 10 Carbon | 11 Base | |

SUPERLITE SANDWICH CAP CONSTRUCTION

Thanks to the unique properties of GRAPHENE, the Superlite sandwich cap construction has had a reduction in the materials inserted with an increase in its responsiveness, allowing faster and more precise change from edge to edge. The ultimate ski for flotation and responsiveness.

- | | | |
|--------------------|-------------------------------|---------------------------------|

WHEN A PERFECT SOUL FINDS A PERFECT BODY.

What's Your Limit?

BODY&SOUL THE PERFECT SYNERGY!

TECHNOLOGY

BOOTS

PERFECT FIT

PERFECT FIT IS THE EXCLUSIVE 100% CUSTOMIZABLE INNERBOOT THAT PROVIDES THE BEST LEVEL OF PRECISION, COMFORT AND DURABILITY.

100% full customization:
The new innerboot perfectly adapts to the foot and shell.

Increased precision,
performance and comfort
durability.

Customization can be repeated
virtually without limitation.

ADAPTIVE FIT TECHNOLOGY

Adaptive Fit Technology is the first and only ski boot technology that lets you change the width of your boot from comfort/performance last to precision/performance last with the turn of a screw.

THE NEW HEAD 100% CUSTOMIZABLE INNERBOOT

WHAT IS IT?

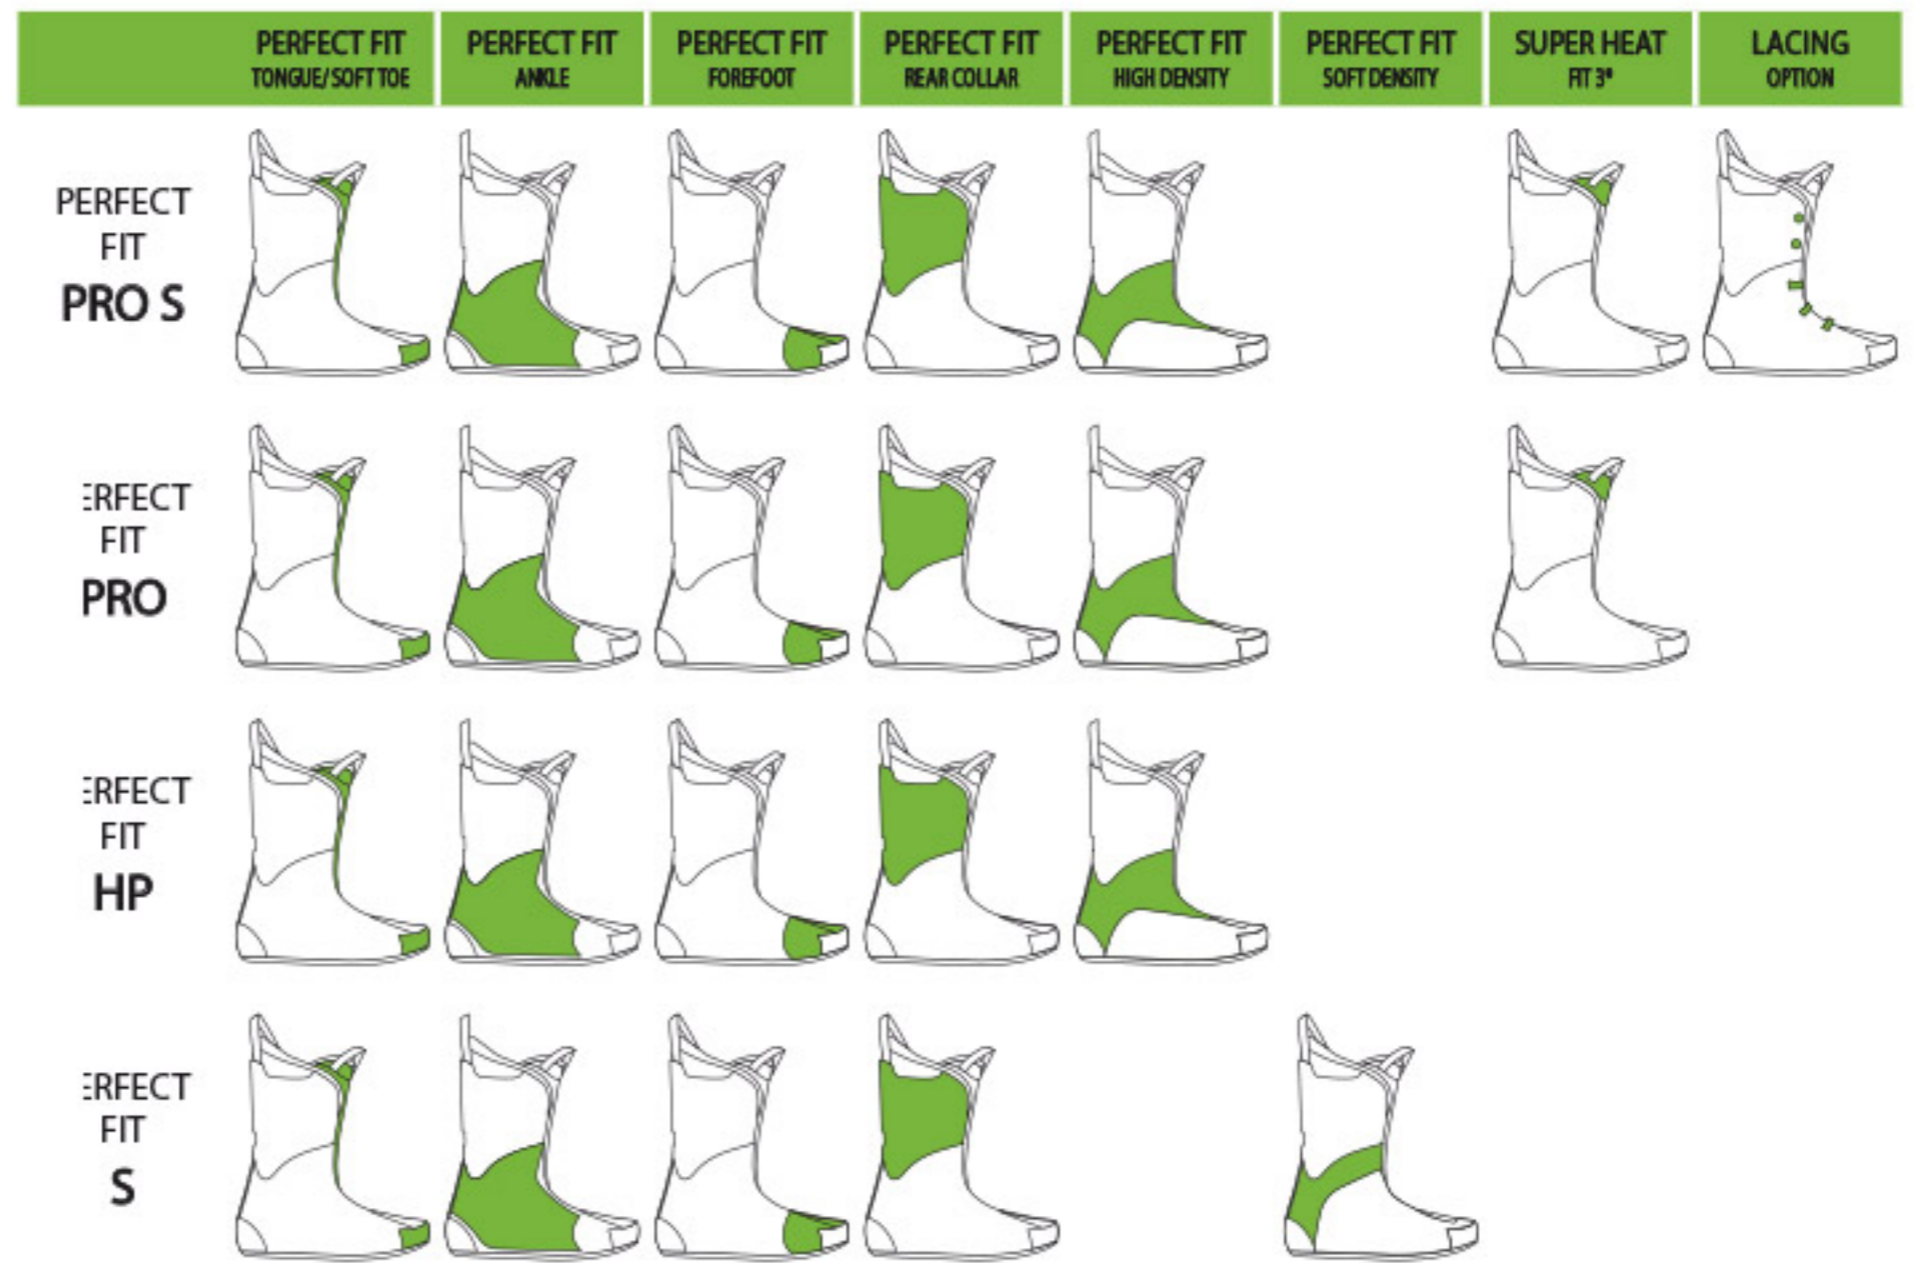

Perfect Fit is a liner made entirely from a special blend of PE and EVA thermo-formable material that adapts to the individual foot (inside) and to the shell (outside). The tongue is also made with thermo-formable material to complete the customization.

Heat Fit

Full Custom Heat Fit

* Super Heat Fit 3: High Performance material featuring self-adapting padding on the tongue.

PERFECT FIT HIGH DENSITY CONSTRUCTION

Increased high density material on the medial and lateral aspects of the mid foot promote better performance and a more precise fit.

PERFECT FIT SOFT DENSITY CONSTRUCTION

By using a lower density material on the majority of the liner, a more comfortable, relaxed fit is guaranteed.

HOW TO CUSTOMIZE THE INNERBOOT

1 Warm up shell and liner for 5 minutes at 80 °C.

2 Step in and close the buckles.

3 In 10 minutes the customization is ready.

BOOT TECHNOLOGY / RAPTOR AND CHALLENGER

DOUBLE POWER BOOSTER VELCRO

The strap of the Double Power Booster Velcro works as a double pulley for better closure and a tighter wrapping on the cuff. The elastic Booster Strap allows more dynamical response of the boot. The result: more precise transmission and faster ski reaction. (Manufactured under license from Skimetrix Ltd.)

Protected under one or more of the following:
European patent N. 1087676,
US patent N. 6.026.594
Canadian patent N. 2.335.698.
Other patents pending.

OFFICIAL SUPPLIER OF GREAT TURNS

BOOT TECHNOLOGY / RAPTOR, CHALLENGER AND VECTOR

SPINEFLEX BUCKLES

Spineflex is a revolutionary buckle concept with a flexible element and a constant closure point. The flexible element allows the buckle to adapt to the shell profile and thus provide a homogeneous foot wrapping independent from the degree of closure. The increased precision and comfort created from the absence of pressure points results in better performance.

BOOT TECHNOLOGY / CHALLENGER AND VECTOR

NEW DOUBLE POWER SPINEFLEX BUCKLES

New Double Power Spineflex Buckles is a revolutionary buckle concept with a flexible element and a constant closure point. The flexible element allows the buckle to adapt to the shell profile and thus provide a homogeneous foot wrapping independent from the degree of closure. The increased

precision and comfort created from the absence of pressure points results in better performance. The ergonomic, patented Double Power lever increases the leverage of the buckle by 50%, halving the effort required to buckle in constant release values.

BOOT TECHNOLOGY / CHALLENGER, VECTOR, VENTURE, EDGE AND CUBE

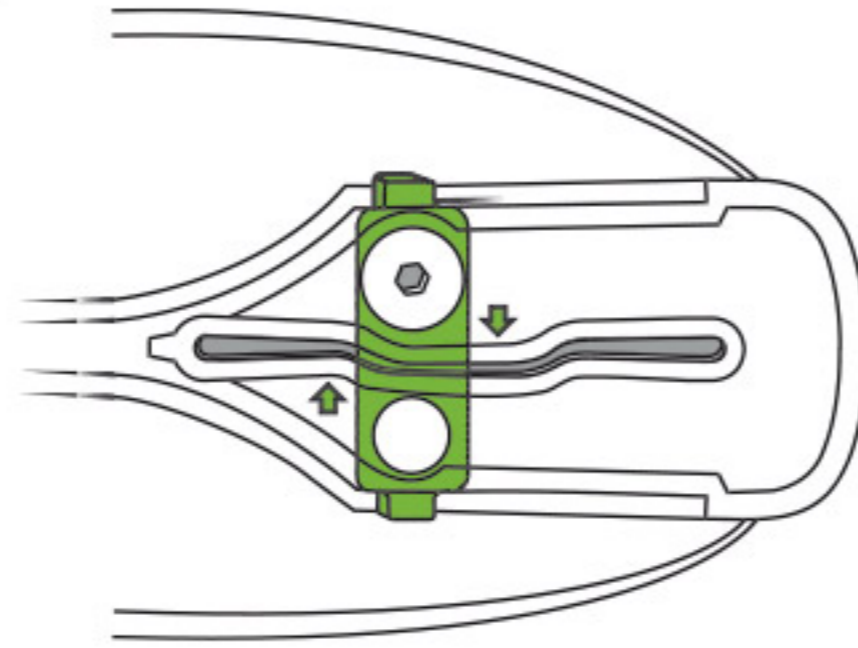

Supermacro toothplate with a push of a simple button, the ratchet provides a 28mm range of adjustment granting to fit any leg.

BOOT TECHNOLOGY / CHALLENGER AND ADAPT EDGE

ADAPTIVE FIT TECHNOLOGY

Adaptive Fit Technology is the first and only ski boot technology that lets you change the width of your boot from comfort/performance last to precision/performance last with the turn of a screw.

BOOT TECHNOLOGY / CHALLENGER

POWER SKI HIKE

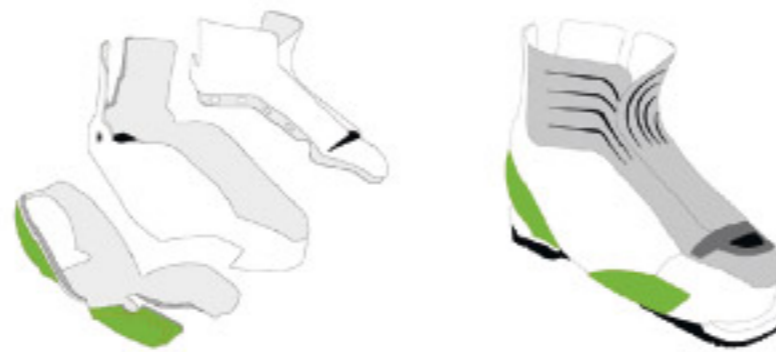

Provides the easiest selection of ski and hike mode available. Easy to identify and operate, yet providing a powerful connection between the cuff and shell for maximum precision and impulse transmission.

BOOT TECHNOLOGY / VECTOR, CHALLENGER AND ADAPT EDGE

TRI (BI)-INJECTION FRAME

A high performance, multi-density shell that optimizes easy entry, foot wrapping, comfort and energy transmission.

BOOT TECHNOLOGY / CHALLENGER, VECTOR AND EDGE

DOUBLE POWER SPINE-TECH BUCKLES

Spine-Tech buckles provide constant traction and avoid pressure points, improving both comfort and precision. The ergonomic, patented Double Power lever increases the leverage of the buckle by 50%, halving the effort required to buckle in constant release values.

BOOT TECHNOLOGY / CUBE

DEVELOPING OUR CUBE3 LINE, WE DECIDED TO TACKLE THE ONE CHALLENGE EVERY SKIER FACES EVERY DAY ON THE MOUNTAIN: TO COMBINE GREAT SKIING PERFORMANCE WITH GREAT WALKING PERFORMANCE. AFTER ALL, ON ANY GIVEN DAY, WE SPEND UP TO 30% OF OUR TIME OUTSIDE OF THE BINDING.

EASY IN

Developing our Cube3 line, we decided to tackle the one challenge every skier faces every day on the mountain: To combine great skiing performance with great walking performance. After all, on any given day, we spend up to 30% of our time outside of the binding.

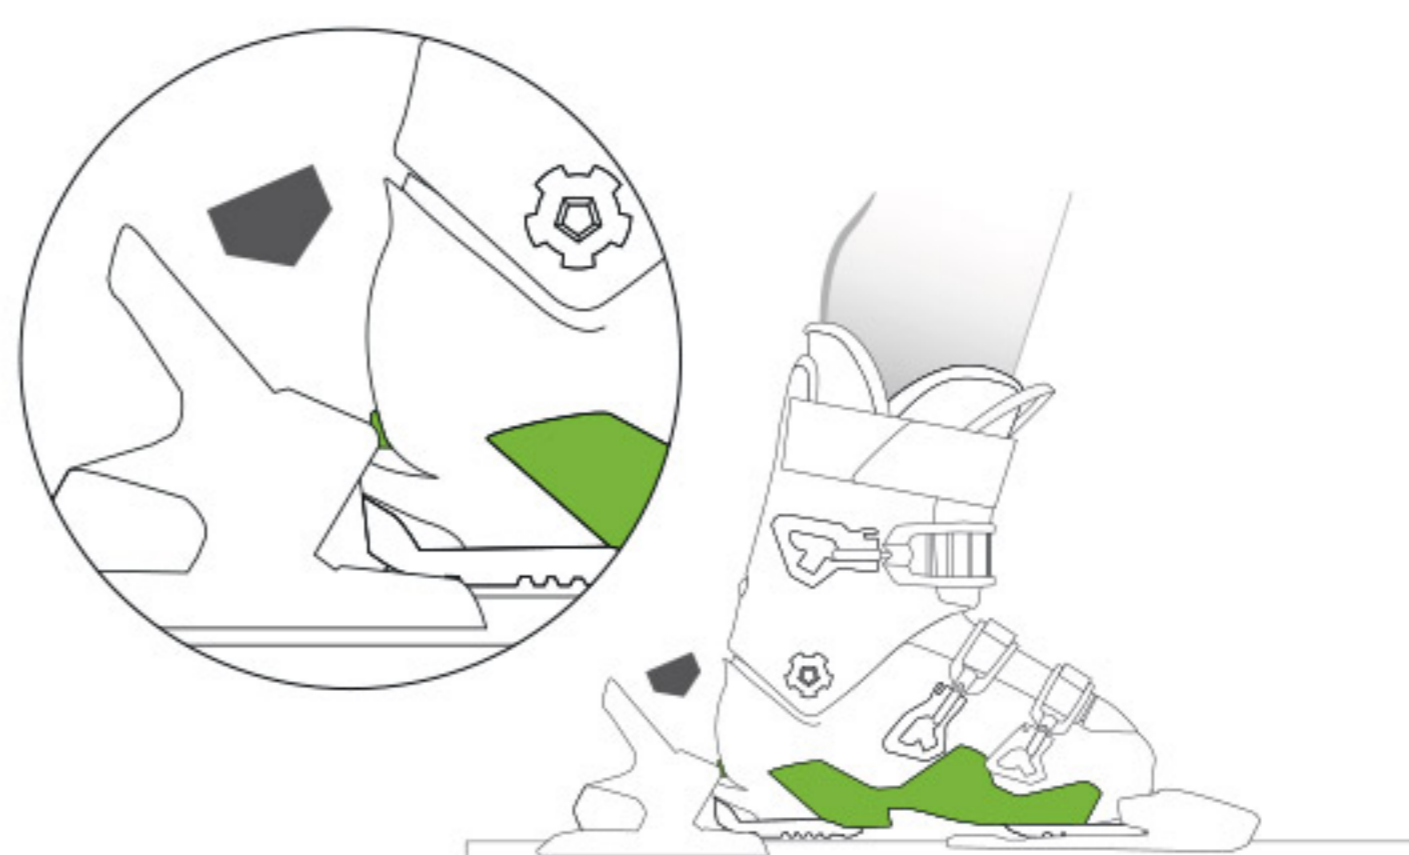

EASY WALK

Outside of the binding, the shaft of the Cube3 is always unlocked, allowing natural walking. This, in combination with (patented) SoftWalk heel and grip system on the heel, makes the Cube3 a superb walking boot.

EASY SKI

The moment you step into your binding the patented integrated AutoSkiWalk mechanism blocks the shaft, allowing you to speed off down the mountain without bowing, bending or buckling.

BOOT TECHNOLOGY / VENTURE

SKI / TOUR MECHANISM

The Ski / Tour mechanism is the right combination between skiing and touring. Providing a perfect lock of the shell during the downhill activities for the maximum performance, yet offering an easy release for the return trip.

VIBRAM SOLE

The bi-injected Vibram® sole allows safe hiking on all terrain while reducing shock absorption as well.

VIBRAM TOURING PADS

Interchangeable Vibram® Touring Pads – an innovative high performance rubber sole provides the maximum grip when hiking on anything from rocks on a peak to the parking lot ice. Please refer to the international standard "ISO 9523".

BOOT TECHNOLOGY / OVERKILL, OBLIVION, VENTURE, THE SHOW

SHOCK ABSORPTION WEDGE

A rubberized boot board that allows for smoother riding over varied terrain as well as an additional layer of protection from impact to create a shock-free landing.

BOOT TECHNOLOGY / THE SHOW

P&P – HIGHER LINER

High Profile P&P liner to grant the best support and comfort when landing.

BOOT TECHNOLOGY / DREAM

Women's performance last

Narrower heel width and forefoot dimension, smaller ankle circumference to perfectly fit female morphology.

Shell insert

Easy-entry thanks to soft overinjected insert and PU overlapping plate.

Double adjustable profile

New designed rear spoiler able to increase by 1cm the calf circumference by rotating the 2 screw hidden under the rear part of the velcro. With a low cuff no calf will pinch anymore.

Double tongue liner

Permits the woman's calf to widen freely backwards and find a comfortable accommodation in the space obtained through the movement of the rear spoiler.

Adjustable Wedge Arch

Equipped with «on-off» mechanism for custom adjustment of the wedge arch. Customization of the arch support is then possible corresponding to different skier's feet by rotating the flap on or off the upper surface of the wedge.

Ambition

THE TOURING NEWCOMER

The TYROLIA AAmbition Alpine Touring binding is the perfect companion for all Alpine Touring Aficionados so that no terrain remains unattainable. We included every attribute of our high-performance alpine ski bindings in this Alpine Touring binding.

ALPINE TOURING TOE

This newcomer in the ski touring segment features the exclusive TYROLIA Alpine Touring (AT) Toe which can be easily adjusted to alpine and touring boot norms.

A 65 mm wide mechanical AFS gliding element secures constant release values also with rubber soles.

In combination with two rollers this binding provides superior safety features with the rapid and exact boot re-centering that skiers expect from TYROLIA.

As a result of its harmonious design, the TYROLIA AAmbition has a wider contact area which improves stability and provides a secure foundation for every skiing situation.

Furthermore, its pivot is efficiently positioned right below the ski boot tip to ensure perfect force transmission and a tilt up to 90 degrees.

EASY ADJUSTABLE TELESCOPIC TUBE

Additionally the AAmbition features a unique light-weight telescopic tube which offers an easy adjustment opportunity to different boot sole lengths. Thus, with only one binding model it is possible to cover the entire range of different sole lengths - from 260mm up to 350mm.

Furthermore, with the setting of the telescopic tube and through the compact mounting, perfect binding positioning on your skis is improved and mid-point deviation is avoided.

TYROLIA FREEFLEX

The TYROLIA approved Freeflex System, which interacts with the AT Toe, the telescopic tube and the AT Heel, offers natural dynamics, excellent downhill performance and therefore a supreme ski touring experience.

ALPINE TOURING HEEL AND CLIMBING AID

The state-of-the-art designed climbing aid is positioned as close as possible to the Alpine Touring (AT) Heel. This provides better walking balance and effortless climbing in all situations. The low stand height of 38 mm improves stability and offers a confident stance. With four different climbing aid positions (climbing in a 0°, 5°, 10° or 15° position) it is possible to adapt on different terrains without stepping out of the binding. It does not matter if it is a walk through flat terrain or a steep slope up to the summit. Simply use the ski pole in order to change the climbing aid position and also to lock for the downhill ride.

CRAMPONS

Additional crampons are available as spare parts in widths of 90 mm, 105 mm and 120 mm, and provide safe climbing and a secure stand in any situation.

- 90 mm: A. No.: 163006 (1 pair)
- 105 mm: A. No.: 163007 (1 pair)
- 120 mm: A. No.: 163008 (1 pair)

DEMO AND RENTAL SUITABLE

In order to offer ambitious sportsmen an opportunity to widen their horizons, the TYROLIA AAAmbition is also demo and rental suitable:

Combined with a spare demo track, the TYROLIA AAAmbition Alpine Touring binding can be tested and shown to a broad audience. Only two easy adjustments (one on the telescopic tube and one on the demo track) are required to fit to different boot lengths without extra drilling.

◀ 90mm ▶

BRAKES & INDIVIDUALITY

Considering the different ski widths, the TYROLIA AAAmbition comes without brakes. This gives you the opportunity to either choose the perfect fitting brake out of four different widths (85 mm/95 mm/105 mm/125 mm) or simply to ride and hike without brakes using appropriate powder straps – TYROLIA AAA-Series Powder Strap (1 pair): A. No.: 162981 Additionally available: TYROLIA AAA-Series Powdercord – A.No.: 163025

To sum up: The TYROLIA AAAmbition Alpine Touring binding is what every ski touring fanatic was looking for. On one hand it offers freedom and individual adjustment possibilities and on the other hand it provides the premium high-end performance that is expected from the world market leader TYROLIA. The solid, light-weight construction and its maximum functionality enhances the ultimate mountain experience for ambitious climbers as well as for touring newbies.

Overcome boundaries - Simply just: Access All Areas!

Adrenalin

THE PERFECT ALL-ROUNDER

With the AAAAdrenalin Freeride binding from TYROLIA, no terrain is out of reach. This binding provides a level of skiing performance never before seen in an alpine binding. It combines performance driven freeride features with the ultimate ergonomic walking mechanism for maximum freedom on-and off-piste. Overcome boundaries smoothly for a perfect ride.

The TYROLIA AAAAdrenalin binding is a perfect option for freeriders who prefer precise downhill control combined with ideal mechanics for short walks to reach untouched paths for a memorable ski experience. Designed together with freeskiers and backcountry skiers, this member of the TYROLIA AAA-Series is designed for ski widths from 80 mm and wider. The TYROLIA AAAAdrenalin brings paramount freeride performance in every terrain, on every slope.

FREERIDE (FR) PRO TOE

The TYROLIA AAAAdrenalin comes with the Freeride (FR) Pro Toe with its ergonomic pivot position for optimal tilt up movement up to 90 degrees. This system provides effortless walking over short distances.

The FR Pro Toe is adjustable by changing the position of the Anti-Friction-Slider (AFS Metal) to cover alpine and touring boot norms. This 68 mm wide slider plus a stainless steel gliding element provide constant release values and result in a broader contact area to the ski boot sole.

The benefits: more stability, more direct power transmission and an ultimate skiing performance.

FREERIDE (FR) PRO HEEL

The ultra-wide 80 mm heel track makes all the performance difference needed to take this product over the top. Extra width and the superior kinematics of TYROLIA's high performance bindings make it absolutely stable and reliable for perfect force transmission and unmatched performance. The heel can easily be adjusted to different boot sole lengths without any additional tools.

It covers a wide range of seven ski boot sizes. The TYROLIA AAAAdrenalin Freeride binding is available in two lengths:

- SHORT (S) for ski boot sole length of 270-330 mm
- LONG (L) for ski boot sole length of 300-360 mm

◀ 60mm ▶

AAA-ASCENDER LOCK AND CLIMBING AID

To Access All Areas, transition from skiing to hiking is incredibly fast, easy and convenient. Simply use the tip of the ski pole without stepping out of the binding to move the highly visible Ascender Lock to change between hiking and ski mode.

Another TYROLIA feature is the possibility to walk in the 0° position. After release, TYROLIA's climbing aid can easily be operated with a ski pole and it can be positioned in three different angles (0°, 7° and 13°) for an optimal walking position. This improves balance and a secure stand on your way to perfect skiing spots.

CRAMPONS

Additionally, TYROLIA crampons (available as spare parts in three widths: 90 mm, 105 mm and 120 mm) can be mounted to improve grip in steep and icy terrain.

- 90 mm: A. No.: 162977 (1 pair)
- 105 mm: A. No.: 162978 (1 pair)
- 120 mm: A. No.: 162979 (1 pair)

Whether skiing downhill or bridging walking paths, the TYROLIA AAAadrenalin Freeride binding gives adventures an unrivaled combination of skiing performance and all terrain versatility, providing easy Access to All Areas!

FREEFLEX

The platform of TYROLIA's AAAadrenalin binding provides the approved TYROLIA Freeflex function which allows the ski to flex as it is designed to do so it can retain its natural dynamics. Freeflex is enabled by the free gliding plate that runs within the titanal heel track and is supported by the center of rotation of the binding toe.

BRAKES & INDIVIDUALITY

The TYROLIA AAAadrenalin comes without brakes. This gives each freerider the chance to choose the precisely fitting brakes in regard to the ski widths. The TYROLIA AAAadrenalin bindings can be combined with brake widths of 88 mm, 97 mm, 115 mm or 130 mm.

Additionally available: TYROLIA AAA-Series Powdercord - Art. No.:163025

Attack

ASTONISHING PARK & PIPE ACTION

Freeskiers prefer equipment which provides control, performance and usability. Not only for clear slopes and untracked powder areas, also for stoked park and half pipe rides. The TYROLIA AAAAttack Freeski binding models combine functionality and modern design to meet these demands. A perfect tool for all-around skiers who are willing to attack!

MODERN ARCHITECTURE

The special Freeride (FR) Pro Toe with its horizontal spring reflects the modern architecture of the entire TYROLIA AAA-Series. Furthermore, it includes a super secure 77 mm metal anti friction device (AFD Metal), which can be adjusted for all types of alpine boots (Type A only).

The TYROLIA AAAAttack 16 features the Race Pro Heel, with a reduced stand height of only 17 mm for the ultimate freeski adventure. The TYROLIA AAAAttack 13 and AAAAttack 12 models feature a solid construction, reduced weight and a modified heel, which puts this model in a category of its own.

PERFECT INDIVIDUALITY

This fired up freeski binding models are available in three different DIN settings (TYROLIA AAAAttack 16, 13 and 12 – ideally suited for the brand new Women's Line). The built in AAA-Series technology ensures high quality and perfect usability. In regard to its clear design and its compact measurement, the AAAAttack model can be ideally used on ski widths from 80mm and wider. Some models are delivered without brakes.

This gives riders the opportunity to customize the setup to their needs. Brakes are available in different widths: 88 mm, 97 mm, 115 mm, 130 mm and 150 mm. Additionally available: TYROLIA AAA-Series Powdercord – A.No.: 163025

Attack DEMO

TYROLIA AAATTACK 13 DEMO

NEWLY REDESIGNED

The TYROLIA AAAttack 13 DEMO model, a modified version of the TYROLIA AAAttack Freeski binding, is the first demo and rental suitable freeski binding that is anchored on a metal toe track. This unique feature ensures a lower stand height, a more compact design and increased stability compared with other bindings. In combination with the proven TYROLIA Rental Heel track, the TYROLIA AAAttack 13 DEMO offers the opportunity to fulfill every customer's desires, whether for retail, demo or rental purposes.

This easy to adapt TYROLIA AAAttack Freeski binding model was designed for a wide range of sole lengths, and therefore can be adjusted to all available alpine boot sole lengths from 259 to 386mm - tool-free in a matter of a few seconds, by moving the toe and heel pieces.

Attack the track with the TYROLIA AAAttack Freeski bindings! Overcome boundaries - simply just: Access All Areas!

PROTECTION

WELCOME TO HEAD PROTECTION 14.15

Head's advanced sport protection delivers maximum defense against the innate dangers of mountain sports and their natural environs. We achieve this through innovation, the integration of next level materials and extensive R&D both in the lab and on the hill. Head Protection provides a safe zone in which athletes of all levels can participate, progress and enjoy. Add to this contemporary design and aesthetics and you have protection that athletes should wear and want to wear.

Head Protection breeds confidence: confidence breeds progression.

TIME TO GET SERIOUS

HEAD LAUNCHES

A NEW HELMET TECHNOLOGY

BY USING A
REVOLUTIONARY
IMPACT ABSORBING
MATERIAL.

INNOVATIVE

This is the start of a new era in helmet construction: SOFT CORE. The innovative DELTACELL TECHNOLOGY builds the core of the helmet, increasing comfort & fit, and hence safety.

SAFETY

The best helmet is the one you don't even feel it's on your head. The soft DELTACELL TECHNOLOGY adapts perfectly to the head, creating a snug fit for increased safety.

COMFORT

The soft DELTACELL TECHNOLOGY with its characteristic pattern adapts itself to the wearers head individually, avoiding pressure points. This makes the A|SERIES outstanding in terms of comfort.

AIRFLOW

DELTA CELL has an open structure. This enables a constant airflow for a comfortable helmet climate.

HELMET TECHNOLOGY

OVERVIEW

CONSTRUCTION

LIGHT SHELL

We use the LIGHT SHELL for all InMould helmets with polycarbonate outer shells. Here the shock-absorbing EPS foam core is injected directly into the PC shell. The two components bind together and offer perfect protection and a low weight.

CARBON SHELL

The helmets shell is made from carbon fibres, which increases safety and decreases weight. This is why this technology is used for our racing helmets.

TOUGH SHELL

The classic dual construction made up of the ABS outer shell and the shock-absorbing EPS foam core is matchless in terms of longevity and impact strength. For this reason we use this construction for our STIVOT series helmets and for all the helmets in our rental range.

CONEHEAD SANDWICH CORE

The particular, pyramid-like structure of the two-layer foam ensures that shocks are better absorbed and that the impact energy is extensively distributed over the helmet. An innovative construction by means of which we brake the mold in the design of winter sports helmets.

MONO CORE

The shock absorbing inner layer of the MONO core is injected through the hard outer polycarbonate layer to create a single comprehensive unit that provides perfect protection at a reduced weight.

DUAL DENSITY CORE

This patented core technology is made from EPS with dual densities. This increases the helmets impact performance and suitable according to the FIS RH 2013 standard.

DELTACELL CORE

The revolutionary DELTACELL core technology heralds a new era in helmet construction. Using innovative polymer technology, this soft helmet has outstanding impact performance and the ability, to adapt to individual head shapes.

LOWER MICROSHELL

The helmet body is also coated with polycarbonate in order to avoid scratches and dents in the foam.

TWIST STOP GOGGLE RETAINER

The Twist stop goggle retainer will keep the goggles exactly where they belong and avoids any slipping of the straps.

REMOVABLE BRIM

For some, it is a matter of style – for others, it is a matter of function: the removable brim gives the helmet a cap-like style and serves as a sun, snow or rain protection. The integrated vents ensure that the moisture of the goggles is transported away and that the goggles do not fog up.

HYBRID SHELL

Our new Hybrid Shell construction combines the advantages of the robust ABS technology with the lightweight In-Mould construction. Thus, we develop lightweight, extremely robust and durable helmets. Hybrid Shell helmets may be constructed slimmer, a fact that adds to the stylish look.

LOWER MICROSHELL

The helmet body is also coated with polycarbonate in order to avoid scratches and dents in the foam.

VENTILATION

ADJUSTABLE DUAL ZONE VENTILATION

The ventilation in the two air ducts may be optimally adjusted independently from each other by means of two slide controls at the front and back side of the helmet.

ADJUSTABLE VENTILATION

The opening of the ventilation ducts on the top of the helmet may be adjusted continuously by means of a slide control.

THERMAL VENTILATION

Thermal Ventilation is our automatic ventilation system which leads warm air away from the head to the outside without allowing any cold air to the inside.

LINING

SYMPATEX LINER

SYMPATEX liner ensures excellent climate control. The HIGH2OUT laminate guarantees fast, effective sweat removal from the head while blocking moisture from coming in from the outside.

BEANIE LINER

The soft Microfleece material of the Beanie Liner adapts perfectly to the head and thus avoids any bruises and the unpleasant entering of cold air. Molded-in mesh zones let heat and moisture escape to the outside and, together with the ventilation system, ensure a pleasant head climate.

WOMEN SPECIFIC BEANIE LINER

Women have a different head shape than men. This is why we developed a Beanie Liner for women which is exactly adapted to the anatomy of the female head. This was achieved by means of two differently thick padding zones made of soft Microfleece.

INTEGRATED LINER WINDSHIELD

If it is very cold or stormy, the forehead above the goggles may be exposed to extreme temperatures. The liner windshield integrated in the Beanie Liner may simply be folded down if required and will thus close the gap between helmet and goggles. A small feature with great effect.

VENT DAMS

On cold days on the slope, the vents of the Thermal Ventilation may easily be closed by means of the Vent Dams.

AUDIO SOLUTION WITH VOLUME CONTROL

Our audio-helmets are equipped with high-quality earphones in the soft ear pads. The volume control integrated in the earphone cable provides for easy handling.

AGION™ ANTIMICROBIAL LINING

We use an antimicrobial Agion™ material for our liners. The combination of disinfecting silver ions and a preceramic coating makes the surface antimicrobial and the helmet remains odorless.

PERFORATED SOFT MICROFLEECE

The soft Microfleece material has two functions: it feels pleasant on the skin, absorbs moisture and transports it away from the head.

SOFT VELVET

A soft and at the same time durable material which absorbs the moisture and thus keeps the head dry.

EARPADS / NECK

HEIGHT ADJUSTABLE EARPADS

Due to the fact that not all people have their ears at the same height, we developed a patented system for the height adjustment of the ear pads. This system guarantees an optimal hearing and perfect fit of the helmet. Of course you can completely remove our ear pads including Neckgator on warm days or for cleaning purposes.

3D FIT

Head 3D Fit allows an exact horizontal as well as vertical adjustment of the helmet to the shape of your head.

2D FIT

The size adjustment system may be varied horizontally in order to individually adjust the helmet to your head.

REMOVABLE EARPADS

These ear pads and neckgator can be removed to suit the variable weather conditions and for cleaning.

HAIRPORT

The asymmetric positioning of the dial creates a HAIRPORT for ponytails.

BOA 360°

The 360° FIT system by BOA evenly adjusts the fit of the helmet to all shapes of head.

HELMET

FITTING

1

FIND THE RIGHT SIZE

Measure your head circumference with a tape measure which you apply above your ears. You will find the correct helmet size for your head circumference in the table below.

2

PUTTING ON THE HELMET AND ADJUSTING THE CHIN STRAPS

The helmet shall sit tightly on your head directly above your eyebrows. Adjust the two chin straps so that they solidly fix and hold the helmet.

3

CHECK FIT WITH GOGGLES

In order to check the perfect fit of the helmet, please put on your goggles. There should be no gap at all or an only small gap between the upper edge of your goggles and the helmet.

GOGGLES TECHNOLOGY

OVERVIEW

FEATURES

EXTREME WIDE FIELD OF VISION

Head's goggles with an extra wide field of vision are perfect for racers, allowing a tight aerodynamic tuck without impaired vision.

SPARE LENSES INCLUDED

COMPATIBLE WITH ALL HEAD HELMETS

LENS

SPRAYED POLYCARBONATE DOUBLE LENS

Lightweight Polycarbonate lenses are up to 10 times more impact-resistant than plastic or glass lenses and provide 100% protection from harmful UV rays.

SPRAYED POLYCARBONATE SPHERICAL DOUBLE LENS

A spherical lens has a consistent vertical and horizontal curve for a true and clear field of vision.

UV400 PROTECTION

UV400 protection keeps out 100% of UVA and UVB light; 5% better than the level of protection approved by the EU.

ANTI FOG

Additional coating that provides maximum protection against unwanted lens fogging and moist scratching.

MATERIAL

TRIPLE-LAYER FOAM

Triple-layer foam keeps out the elements and provides maximum levels of comfort, performance and fit.

DOUBLE-LAYER FOAM

Double-layer foam delivers perfect fit and comfort and a balanced micro-climate within the goggle.

HORIZON RACE

ART.N°: 373314 BLACK + SPARELENS
ART.N°: 373324 LIME + SPARELENS

PERFECT FIT, OPTIMUM COMFORT,
UNRESTRICTED FIELD OF VISION.

BODY PROTECTION

FITTING

REMOVABLE PROTECTION UNIT

The Protection Unit can be removed from the parent garment for ease of washing.

REMOVABLE SHOULDER STRAPS

Removable Shoulder Straps can be easily removed and reattached to comply with FIS regulations.

REMOVABLE PROTECTION UNIT

REMOVABLE SHOULDER STRAPS

ADJUSTABLE TROUSER CONNECTOR STRAPS

EXTRA WIDE WAIST BELT

The height adjustable waist belt measures 120mm in width and delivers a secure, comfortable fit.

SAS TEC VISCOELASTIC FOAM

Visco Elastic Foam is a soft, conformable, shock absorbent, temperature resistant material with a 10-year guaranteed lifespan; it also can take repeated beatings and still keep protecting.

POLYGIENE

Polygiene® permanent odor control technology is based on silver salt made from recycled silver. It neutralizes odor by stopping the growth of bacteria on the fabric, so you can wear more and wash less.

THERMO FLEECE

Thermo Fleece delivers warmth, wicks moisture, doesn't restrict movement, has a soft inner and durable, anti-pile treated exterior; tough, yet cosy.

3D MESH

3D Mesh is a three-dimensional fabric that allowing optimal air circulation between fabric and skin.

FLATLOCK SEAMS

High elasticity and tensile strength make Nylon 6 a good choice for applications where toughness, impact resistance and durability are critical.

1

Back protector

A back protector may only provide you with full protection if you have chosen the correct size and adjusted it to your body.

2

Adjust the Protector

Apply the protector and tighten the straps. The protector shall sit tight against the body without limiting the freedom of movement.

ABS® TWINBAG FOR LIFE

A QUICK TUG ON THE ABS® TWINBAG'S ACTIVATION HANDLE IS ALL IT TAKES TO INSTANTLY INFLATE TWO AIRBAGS WITH A TOTAL VOLUME OF 170 LITERS. THIS EXTRA VOLUME WILL ALMOST CERTAINLY PREVENT THE WEARER FROM BEING BURIED IN AN AVALANCHE.

Two separate airbag chambers make the ABS® system twice as reliable. If one airbag is damaged during the descent, the other will remain inflated for a sufficient length of time. The wide bearing surface due to laterally placed Twin-Bags stabilizes the body and increases the lifting effect precisely in the critical avalanche run-out zone. Of the 262 persons who activated their ABS® avalanche airbag, 97% survived and 84% of those were uninjured.*

* Source: SLF, known and documented avalanche accidents with ABS® avalanche airbags, August 2010.

ABS® COMPATIBLE*

The ABS® Avalanche Airbag is the original self-rescue system – produced and tested by German avalanche experts since 1985. There are also other, wellknown companies that rely on ABS® and have included backpacks in their product range that are compatible with the ABS®-System. This backpack is especially designed to fit onto the Base Unit with integrated ABS® TwinBag system by means of a zip.

REBELS TRAVELBAG

ART.N°: 383504

FEATURES

Big wheelie bag for ski pros and world travellers • Can be divided into two pieces • Additional zipper on the top for main compartment • Inline Skating wheels • Long stowable pull handle for easy carrying • Large additional compartment at the top • Special base fabric • Padded heavy-duty casing • Neon lining

DIMENSION

RENTAL COMBO

**WHEN FIRST-TIMERS START THEIR
LIFELONG JOURNEY IN YOUR SHOP
WHEN THE ONLY TOOLS YOU NEED
ARE YOUR BARE HANDS
WHEN YOU HAVE EVERYBODY'S
FAVOURITE SKI IN STOCK
WHEN YOUR CUSTOMER IS GONE IN
60 SECONDS**

WHAT'S YOUR LIMIT?

Performance because rented skis ensure a perfectly prepared edge and base at all times, a current-year, perfectly fitting boot and a safely adjusted binding. All without the risks and worries of transport, age, maintenance, repair and the horrors of having bought the wrong product. HEAD's vision of rental is one of perfect accessibility and convenience in the valley and perfectly dialed performance on the mountain. A vision you might share.

WHEN FIRST-TIMERS START THEIR LIFELONG JOURNEY

ERA 3.0

Imagine a ski that performs for everyone, anywhere: One for all. All in one. HEAD ERA 3.0 is not your one-dimensional «Have a problem? We fix it!» technology. ERA 3.0 is a combination of technologies, shape and geometry. Think Rock er, think Radius, think Rebound. Think 3-dimensional.

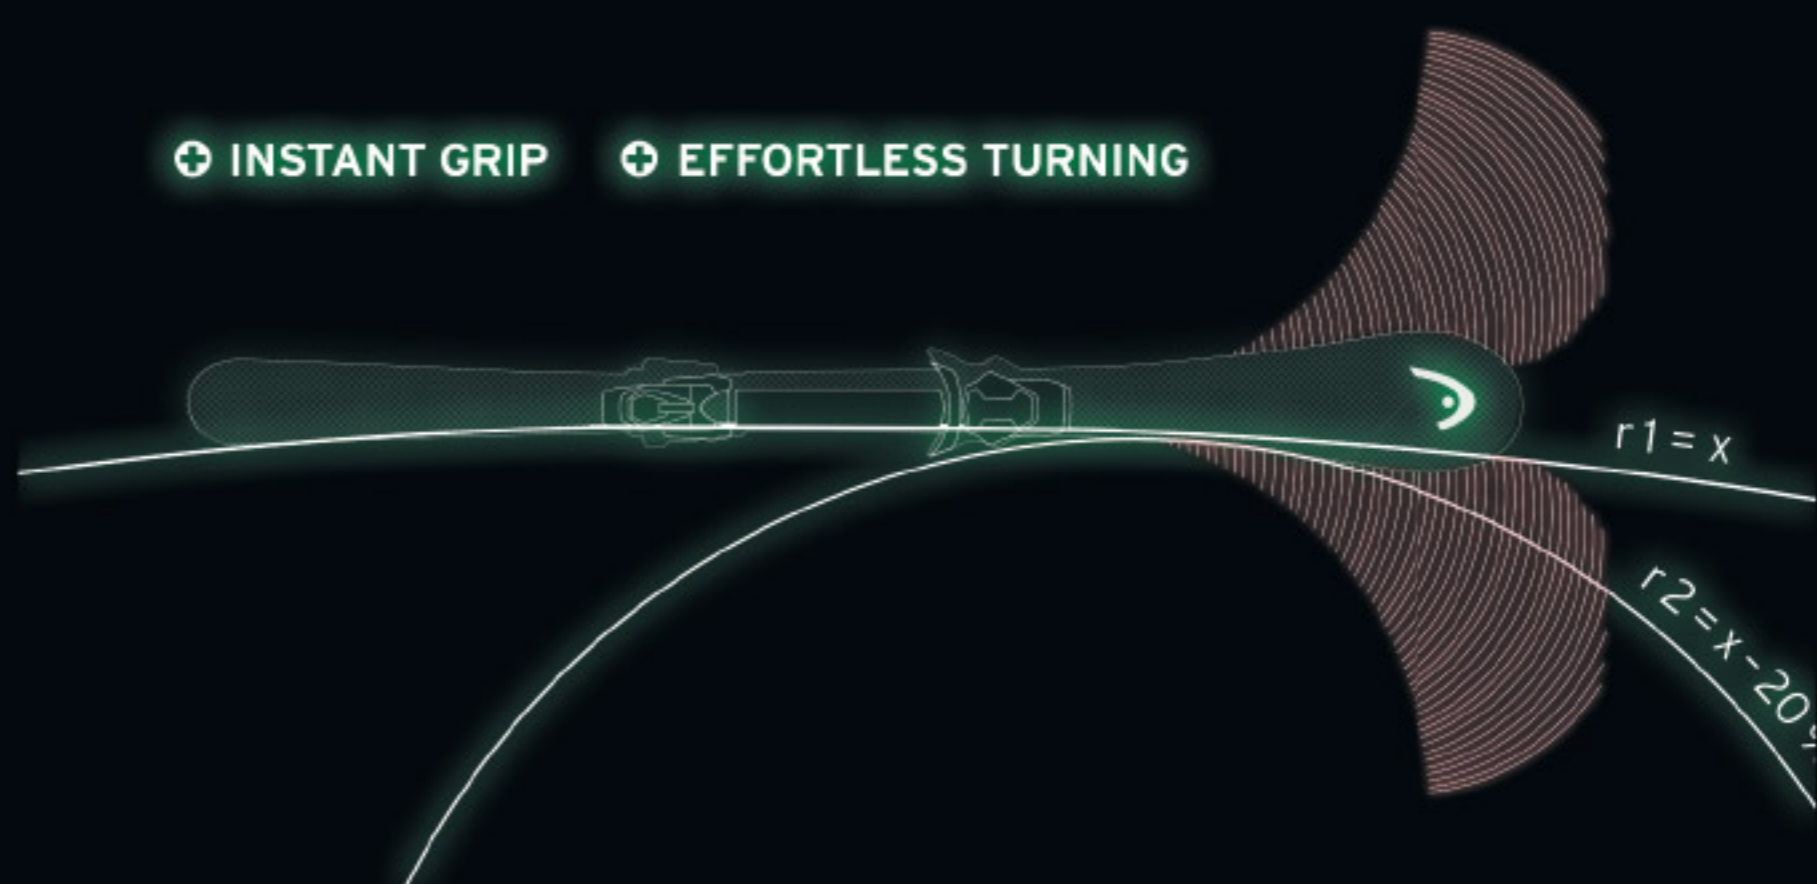

ALLRIDE ROCKER

For superior steering and increased floatation. We place a highly targeted amount of rocker in each model to ensure maximum performance for all ability levels. Steering is easier for all skiers and soft snow versatility is enhanced.

PROGRESSIVE RADIUS

For tremendous turning. Regular rocker makes skiers place their ski further on edge to have it touch from tip-to-tail. With progressive radius, up to 50 % less angulation is needed to enjoy full edge contact. More edge on the snow = more edge grip.

INTELLIRISE REBOUND

For targeted stability. We move our legendary piezoelectric Intellifibers to the tip of the ski. The nasty tip vibrations found on regular rockers are not found here. These skis are too smart for that.

ERA 2.0

THE LITTLE BROTHER OF ERA 3.0. It is everything ERA 3.0 has to offer as far as design, performance and geometry integration,

but without the addition of “Rebound” with its piezoelectric Intellifibers. While we do want to see kids experience skiing performance at the

highest level, they should have the best possible tools to learn and perform.

HEAD LAUNCHES

A NEW HELMET TECHNOLOGY

BY USING A
REVOLUTIONARY
IMPACT ABSORBING
MATERIAL.

INNOVATIVE

This is the start of a new era in helmet construction: SOFT CORE. The innovative DELTACELL TECHNOLOGY builds the core of the helmet, increasing comfort & fit, and hence safety.

SAFETY

The best helmet is the one you don't even feel it's on your head. The soft DELTACELL TECHNOLOGY adapts perfectly to the head, creating a snug fit for increased safety.

COMFORT

The soft DELTACELL TECHNOLOGY with its characteristic pattern adapts itself to the wearers head individually, avoiding pressure points. This makes the A|SERIES outstanding in terms of comfort.

AIRFLOW

DELTA CELL has an open structure. This enables a constant airflow for a comfortable helmet climate.

1 Original shape

2 Adapts to head form

3 Original shape

SD+D

SANITIZE. DOCK & DRY

THE FIRST
FULLY-INTEGRATED
RENTAL HELMET CONCEPT

SANITIZE

From rapid drying to complete disinfection of the helmet. The optional integration of the IONIZATION TUBE prevents development of odors and kills germs and bacteria. HEAD SANITIZER guarantees optimal helmet disinfection – quickly and efficiently.

DOCK

The Head SD+D system provides space for up to 108 SD+D helmets per m² of floor space. The modular construction enables optimal adaptation to the individual space and quantity requirements of every client. Extension to the system – from the simple storage solution to the fully-integrated & ventilated HELMET DRYING RACK, is possible at any time.

DRY

Via AIRDOCKS warm air is directed inside of the helmet. The result: minimal drying time for the operator and pleasantly warm helmets for the rental customer. The helmets are stored according to a logical and individually ordered system. Magnetic AIRDOCKS keep the helmets safely in position – this ensures easy and direct access.

ALL HELMETS OF THE HEAD VENTOR RANGE
ARE COMPATIBLE WITH THE SD+D SYSTEM.

HELMET STORAGE RACK

HEAD has the solution for efficient storage of helmets: the HELMET STORAGE RACK can be adjusted to the space and quantity requirements of the client and provides both space and easy access for up to 324 helmets on a floor space of 3 m².

HELMET STORAGE RACK 150

ART.N°: 375502 for 180 helmets

HELMET STORAGE RACK 200

ART.N°: 375512 for 252 helmets

HELMET STORAGE RACK 240

ART.N°: 375522 for 324 helmets

HELMET DRYING RACK

In addition to the advantages of the HELMET STORAGE RACK, the HELMET DRYING RACK guarantees rapid and effective drying of the helmets via an integrated drying module. Warm air is directed inside the helmet via the AIRDOCKs and dries the helmets from the inside out, thus reducing drying time to a minimum. The optional ionization tube integrated directly into the air intake also prevents development of odor in the helmets. Both the HELMET STORAGE RACK and the HELMET DRYING RACK are available in widths of 150 cm, 200 cm and 240 cm as free-standing racks on legs. Existing track systems of the brand MONTANA can be integrated if required.

HELMET DRYING RACK 150

ART.N°: 375532 for 180 helmets

HELMET DRYING RACK 200

ART.N°: 375542 for 252 helmets

HELMET DRYING RACK 240

ART.N°: 375552 for 324 helmets

HELMET WALLDRYER 100

ART.N°: 375572

The helmet WALLDRYER 100 completes the portfolio of the SD + D system; it can hold 60 helmets on only one meter or three feet of wall space. Helmets attached to the system can be automatically dried during storage. Standard household power supply can be used to operate the unit on 220 V or 110 V. This not only makes the smallest version of a full-feature SD + D system an easy step into the system, but it also fulfills the needs of smaller operations. The SD + D HELMET WALLDRYER 100 racks can be used free standing or standing against a wall.

RENTAL INTERFACE

ART.N°: 375412

The starting point for the modular HEAD SD+D system. An interface offers space for space-saving and efficient storage of 3 helmets and can be used together with the FLIP CLIP RAIL, HELMET STORAGE & DRYING RACK, and HELMET WALLDRYER.

FLIP CLIP RAIL

ART.N°: 375442 1 METER
ART.N°: 375452 2 METER

Tracks for the simple and individual assembly of the RENTAL INTERFACE. In the 1- or 2-meter version, the FLIP CLIP RAIL offers space for 3 OR 6 RENTAL INTERFACES.

LENGTH

- 1 meter
- 2 meter

HEAD SANITIZER

ART.N°: 375462

With this easy-to-operate stainless-steel appliance you can disinfect rental shoes and helmets quickly and efficiently. Three spray jets ensure even distribution of the disinfectant over the whole shoe or helmet for controlled sterilization thereby preventing development of odors. The included table ensures an ideal working height and practical storage space.

2006 WE BROUGHT YOU BYS. 2012 WE BROUGHT YOU SD + D

2014 WE BRING YOU 4D, AND HENCE TAKE SNOWBOARD RENTALS TO THE NEXT DIMENSION.

HEAD BRINGS YOU 4D – PERFECT SETUP, MOST EFFICIENT

We face each of our customers individually, cater to for their perfect setup when renting equipment. Having a positive experience when riding is the key driver to returning customers, no matter what age, gender, ability level or family situation they are – everyone has very own specific needs, which the HEAD 4D system and its wide product portfolio addresses. And

all of that in even less time. If you had to explain the all new 4D system with one word, it would be: Efficiency. But 4D also stands for functionality, reliability and innovation: It is the first snowboard rental system with integrated color coding for boots, boards AND bindings. The all new 4D system manages it to cater for the perfect setup for every single customer of yours, and

at the same time, being the easiest, quickest & most efficient snowboard rental system on the market. Although the benefits of 4D can only be fully exploited by using 4D compatible products, each product can also be used by itself or combined with non-4D products – thanks to its modular structure.

RENTAL SNOWBOARD TECHNOLOGY | FRAMEWALL

FRAMEWALL

The extraordinary stressing of rental snowboards so far resulted in fast abrasion as far as delamination of top sheets. This problem has been solved with the all new FRAMEWALL.

The three-dimensional build of the sidewall covers the boards top sheet and prevents it from chipping and other external hazards, which is resulting in delamination.

The FRAMEWALL is the first 360° protector on a snowboard – that stretches the boards durability considerably!

FRAMEWALL

TECHNOLOGY FEATURES SKI

AIRCOAT SUPERLIGHT TWINTIP CONSTRUCTION: For kids who want to spin their first 7, we found the perfect fiberglass for catching air - Aircoat. This twin tip construction is designed specifically for the lighter weight skier to become the skier of tomorrow.

ALLRIDE ROCKER: Rocker that is equally at home on bulletproof snow as it is in powder. This profile uses early rise in the tip with regular camber throughout the rest of the ski. 20% rocker - 80% camber.

DIECUT UHM C BASE: This durable workhorse base material is dedicated to all country skiing. Diecuts are added for flare.

DIFFUSOR: Ridges in the tail of tail of our skis that direct skis that direct energy to the end of the ski. Like the diffusor on cars, this sticks the ski into the snow at the end of the turn and boosts skiers all over the mountain.

E BASE BLACK: Basic black never goes out of style, and it's always durable. Easy gliding is everyone's friend.

ERA 2.0: ERA 2.0 is the little brother of ERA 3.0 and is everything 3.0 has to offer as far as design, performance and geometry integration, but without the addition of "Rebound" with its piezoelectric Intellifibers.

ERA 3.0: A masterful blend of three independently important technologies to make the ultimate allcountry skis.
ROCKER + RADIUS + REBOUND = ROCKER DONE RIGHT.

ERA 3.0 S : "Sports version" of ERA 3.0 with a multifaceted ski designed with race innovation and inspiration, yet now with the addition of Rocker, Radius and Rebound. Totally new skiing experience with 10% rocker and 90% camber.

HIGHLY TRANSPARENT UHM BASE: A high-density, determinedly durable base that allows gorgeous graphic details to shine through. The perfect combination of fashion and function.

INTELLIGENCE™ TECHNOLOGY: Piezoelectric fibers that absorb vibrations at the speed of light. As you ski faster, the Intelligence™ stiffens the ski to increase stability. It adapts to where and how you ski.

INTELLIGENCE™ CHIP TECHNOLOGY: With Intelligence™ Chip Technology the electrical energy produced by the Intellifibers is not just recycled but accumulated and released bit by bit through a pre-programmed chip.

ISS – INDEPENDENT SUSPENSION SYSTEM: Elastomeric vibration killers located in the tip, tail and underfoot. The elastomers quiet the vibrations that are commonly associated with rockered skis. Underfoot, the vibrations are dampened to provide the skier with a smooth ride.

JUNIOR POWER FRAME: A geometric ski shape that provides structural strength to the outer edges of the ski through geometric design, as opposed to altering the core material or density of the ski. Also, for kids it looks cool and feels different than a standard flat ski.

KERS: A computerized piezoelectronic device that stores ski energy and releases it at the end of each turn. In reality, it's a turbo charger for your skis.

METAL POWER TUBES: Premium features for premium skis. Metal power tubes enable a perfect power transmission from edge to edge. Maximum performance and grip right underneath your foot. Just as you want it!

NANO TECH SURFACE: A permeable nonstick surface with similar molecular compounds and structure to that of a skis base material. This allows you to wax and alter the surface with standard ski wax to assure a lightweight nonstick and snow free surface for your trek up.

PNP ROCKER: Very subtle tip and tail rise with regular camber construction underfoot. PNP Rocker provides a rider a smother turn initiation as well as reduced edge contact to seamlessly butter into tricks and initiate spins. 30% rocker and 70% camber.

POWER CARBON JACKET: A PU injected core that is wrapped in a layer of carbon fibers. This lightweight construction allows for a soft longitudinal flex coupled with a stiff, responsive torsional flex. It delivers an easy-to-use but impressively responsive ski.

POWER SIDEWALL JACKET: An innovation in ski construction that combines the well known fiber jacket construction with ABS sidewalls. A lightweight ski with easy skiing performance including sidewalls for better dampening, shock absorption and edge grip. Performance at its best for its great target group.

RACE STRUCTURED UHM C BASE: The highest quality, fastest base and finish known to man. The technicians who build the skis for our World Cup Rebels use the same material and machines to put this scary fast base and structure into your skis.

RD RACING TOP SHEET: A thinner topsheet material designed to maximize responsiveness. Exclusive to our RD skis.

REBEL CAMBER: Some years ago it was years ago, it was rebellious to have rocker. Now, it's rebellious to have camber. With Rebel Camber, we feature explosive acceleration and excellent edge grip for the World Cup Rebel inside you.

SANDWICH CAP CONSTRUCTION: We take the basic framework from the world cup sandwich and place a cap that just wraps over the top edge of the sidewall to make the ski more suitable for all mountain skiing. Bomber construction with a rounded top edge makes for one incredible allcountry ski.

SANDWICH TWINTIP CONSTRUCTION: We blend a full vertical laminate wood core for durability and add our bomber Independent Suspension System for killing chatter. Pipe, park, big mountains, whatever, bring 'em on and let this construction rip.

STRUCTURED SURFACE: An extra-durable topsheet with a structured exterior. Designed to hold up against the most extreme abuse.

STRUCTURED UHM C BASE: The same high quality material used in HEAD's world-leading race skis is used here. Different structured running base for all conditions.

TNT ROCKER: Tip and tail rocker combined with regular camber underfoot. This combination creates a surfy feel in powder while maintaining hard snow versatility. 40% rocker - 60% camber.

TTS (TIP & TAIL STABILIZER SYSTEM): A ski with reduced vibration and increased dampening and a system to increase torsional strength all while at the same time reducing swing weight.

TUFFWALLS: Impact resistant ABS sidewalls. While maintaining responsiveness, Tuffwalls are designed to take a beating

TWINTIP CONSTRUCTION: A vertically laminated wood core, surrounded by a sock of fiberglass and covered by a durable topsheet. This forgiving twin tip construction is slightly softer than our sandwich twin tip layup, making it better for learning pipe and park tricks.

UHM C BASE: Our highly durable base material for getting the job done well. Not flashy, but steady and stable. The kind of base that will last for years.

WOOD CORE CAP CONSTRUCTION: A vertically laminated wood core, surrounded by a sock of fiberglass and covered by a durable topsheet. This forgiving construction is slightly softer than our sandwich cap making it ideal for ramping up the learning curve.

WORLD CUP SANDWICH CONSTRUCTION: The basic construction invented by Howard Head in the 1940's, perfected and hand built by the finest ski technicians in the modern world. The vertical laminate wood core is embraced by speedfreak phenolic sidewalls and the finest Titanal. This is the fastest construction on the planet. Period.

TECHNOLOGY FEATURES BINDINGS

ABS – ANTI BLOCKING SYSTEM: The exclusive TYROLIA technology of the ABS continuous band allows the boot to move out of the binding almost without any friction, hence delivering maximum safety in case of icing up, dirt and boot wear.

AERO TOE: The Performance Toe which is used in alpine ski racing. Due to higher release forces vertically than horizontally these toes hold up to the high backward lean forces occurring in racing. Our athletes trust in them!

AFS – ANTI FRICTION SLIDER: New weight optimized adapter for gliding insert at Power Bindings for reduced friction, constant release values and maximum safety.

AFS JUNIOR: The innovative mechanical Anti Friction Slider (AFS) automatically adjusts to the boot sole height, compensating A/C standards as well as height differences due to icing up, dirt or boot wear.

AFS METAL: The 68 mm wide slider plus a stainless steel gliding element provides constant release values and results in a broader contact area to the ski boot sole.

AT TOE: The Alpine Touring (AT) Toe can be easily adjusted to alpine and touring boot norms and it secures constant release values also with rubber soles.

BRAKES: HEAD offers brakes with different width for optimal fit on wider skis and fat skis up to 150 mm ski width in the brake area. Some binding models are delivered without brake – “w/o brake” – to avoid brake exchange later on.

CLIMBING AID: The climbing aid with its different climbing positions, which can be operated without stepping out of the binding, provides excellent balance and effortless climbing.

DURA-COATING: Scratch resistant electrostatic powder coating provides environmentally friendly design, optimal durability and a variety of possible colors and color combinations.

FREEFLEX PRO: Best performance enabled by the innovative Freeflex Pro System. The free-gliding heel allows the ski to bend through unimpeded and to retain its natural dynamics. Due to the reduced stand height, the Freeflex band is now much closer to the ski boot. Constant release values reduce the risk of injury and ensure safe ski steering.

FR PRO TOE: The Freeride (FR) Pro Toe can be easily adjusted to different boot sole heights. Its horizontal spring reflects the modern architecture of the AAA-Series.

FULL DIAGONAL: Intelligent 180° release both horizontally and vertically of the Diagonal Toe and therefore ensures maximum safety in backward twisting-fall situations.

LIGHT DIAGONAL HEEL: The Light Diagonal Heel provides maximum safety with a 150° release. Thus, pressure on the knee and ligaments upon twisting forward falls and the risk of injury are reduced.

LITERAIL: LiteRail is the ultimate system for both retail and the rental sector as well. LiteRail is demo suitable, high end Rental suitable, season rental suitable and can be used for all flat skis. Due to three different mid parts, LiteRail covers boot sole lengths ranging from 199 to 347 mm. Covering this large mounting range LiteRail is perfectly suited for kids, juniors as well as adults.

LX TOE: The performance oriented LX toe defines stability and power, much as a strong and tough bull would extremely durable and absolutely reliable.

POWERRAIL: The unrivalled technology for retail, demo & rental by the well-received rail system on a modular basis provides easiest handling, maximum flexibility, optimized performance, perfect match, more stability and durability.

RACE DIAGONAL: Diagonal Toe tuned for racing purposes. Due to its higher release force vertically than horizontally, it holds up to the high backward lean forces in racing.

RACE LITE HEEL: The lighter variant of the Race Pro Heel for young up-and-comers and speed stars of tomorrow.

RACE PRO HEEL: The stand height was reduced according to the actual FIS rules. An increased contact area reduces friction and provides constant forward pressure in all skiing situations.

SL LITE HEEL: Weight optimized toe for junior and light-weight skiers with proven safety features of the HEAD/TYROLIA binding technology.

SOLID COLORED: Solid colored plastic parts are not coated with a separate color layer. Instead, the color has been added to the plastic granulate already. Thus, those parts are absolutely scratch resistant and durable but less color options are available.

SX HEEL: Based on new kinematics the ski boot is precisely secure in the binding. This ensures exact and more direct power transmission from boot to edge.

SX JR. HEEL: The new junior heel with improved kinematics to increase safety and performance for junior skiers.

SX JUNIOR TOE: The innovative kinematics of HEAD's LX and SX adult line provide advantages in performance and stability for the SX Junior line for young speedsters as well.

SX KID HEEL: The SX Kid heel provides the little ones with the best in the latest technologies and safety standards for binding innovation and integrates the new kinematics for the younger set, too. Because safety is paramount, always.

SX KID TOE: With the SX kid toe for up-and-comers and integrated innovative LX/SX kinematics ski steering now requires even less effort.

SX TOE: The kinematic improvements are reflected in the product design of the SX toe as well. With its high cheek bones it reminds of a fox – smart, spry, agile and very clever.

TEFLON WIDE: The wide Teflon® insert ensures better force transmission, more stability and therefore optimal performance.

TELESCOPIC TUBE: With only one binding model it is possible to cover the entire range of different sole lengths (from 260 mm up to 350 mm).

TRP – TYROLIA ROLLER PINCER SYSTEM: The TYROLIA Roller Pincer Toe System (TRP System) of the HEAD bindings with its four rollers and gliding inserts ensure a 180° release and exact centering of the ski boot. The TRP system reduces the load on knees and ligaments and improves performance considerably.

BASES/PLATES

JUNIOR RACE PLATE 11: It provides an additional stand height of 11mm and covers boot sole lengths from 251-332 mm. Oblong Holes and a two-piece flex system support Freeflex and maintain ski flexibility. It provides increased torsion stability, control and edge grip although being super light. Pre drilled mounting holes make it easier to mount the binding without drilling.

POWERRAIL PRO BASE: The high-end variant, PowerRail Pro, is equipped with an additional Freeflex band which links both toothed areas at the toe and the heel side of the base. Therefore, toe and heel piece can glide on the base unhindered. This additional “Double Freeflex Function” ensures fewer impediments of the natural ski flex, constant release values and better edge grip.

POWERRAIL STANDARD BASE: The standard PowerRail Base consists of a monoblock base body, a cover, and an inlaid toothed area which can be color matched to the ski design. For unhindered natural ski flex, the base is secured by one fixed pair of screws, and three free-gliding pairs of screws. This ensures the base safely adapts to the flex of the ski.

SPEEDFLEX PLATE: The new free gliding speedflex plate provides an additional stand height of 13 mm and the impact on ski flex is greatly reduced. Dampener, oblong holes and the new designed super flex system support Freeflex and maintain ski flexibility. Additional metal brackets provide increased edge grip, torsion stability and control.

TECHNOLOGY FEATURES BOOTS

LINERS

DOUBLE POWER BOOSTER VELCRO: The strap of the Double Power Booster Velcro works as a double pulley for better closure and a tighter wrapping on the cuff. The elastic Booster strap allows more dynamic response on the boot. The result is more precise transmission and faster ski reaction.

DOUBLE POWER VELCRO STRAP: Developed and patented by HEAD, this velcro strap uses a double-pulley system, which gives 100% more closing power, by reducing the effort needed by 50%. The length of the Double Power Velcro can be customized to "wide" or "narrow" by choosing between the internal or external ring. The result is exceptional support through the shaft of the boot.

HEATFIT (HF) LINERS: Multi-component liners with moldable inserts in liner and tongue. 5 minutes of heating, is all that is required, to make the lining adapting and get the perfect precision and comfort.

QUICK ENTRY LINERS: These liners come with a unique easy entry construction in the fore foot. Developed both for skiing and walking, Quick Entry liners always feel extremely comfortable.

PERFECT FIT (PF): Perfect Fit is the revolutionary customization system that provides the best level of precision, comfort and durability. The Perfect Fit material allows the liner to adapt to your feet, ensuring maximum power transmission. 5 minutes of heating at 80 degrees, is all that is required, to make the lining adapting and get the perfect precision and comfort.

PRO LINERS: Pro Series are thin and very supportive liners developed to assure maximum wrapping and extreme high performance. They come with a stretchy upper material, thermo-moldable ankle inserts and a rear sliding insert.

BUCKLES

DOUBLE POWER LEVER:

The Double Power lever reduces the effort needed to close the buckle by 50%. Developed and patented by HEAD.

DOUBLE POWER SPINEFLEX BUCKLE:

Spineflex buckle featuring Double Power lever.

DOUBLE POWER SPINE-TECH BUCKLE:

Spine-tech buckle featuring Double Power lever.

SPINEFLEX BUCKLE: A revolutionary buckle concept with a flexible element and a constant closure point. The flexible element allows the buckle to adapt to the shell profile. The constant closure point increases the overlap between the shell flaps and reduces pressure points. The increased comfort and precision results in better performance.

SPINE-TECH BUCKLE: The Spine-Tech buckle features a constant traction closure point. This translates into a reduction in pressure points, an increased overlap between shell flaps, more comfort, and more precision.

SUPERMACRO RATCHET:

An adjustable, ratcheted toothplate that provides 28 mm of calf-adjustment.

WIDE-BODY BUCKLE:

Oversize buckle designed for an extreme ease of use. The fastest way to close the boot's cuff.

FEATURES

ADAPTIVE FIT TECHNOLOGY:

HEAD patented mechanism in the sole which allows the user to change the width of the boot from 104 to 102mm with one turn of a screw.

ADJUSTABLE REAR SPOILER:

Height adjustable spoiler increases rearward support as it's raised.

ADJUSTABLE WEDGE ARCH SUPPORT:

Internal wedge with ON-OFF mechanism customizing the arch of the foot depending on its anatomy.

DOUBLE ADJUSTABLE PROFILE: A double mechanism in the upper rear part of the boot which adapts the circumference of the cuff up to 1 cm to fit individual anatomical needs. Located on the either side of the cuff's spine, this mechanism allows the cuff to adjust up to 1 cm to better fit the anatomical needs of skier.

EASY ENTRY SHELL CONSTRUCTION:

Front plate easy opening construction to let the youngest get in smoothly.

EASY ENTRY SHELL DESIGN: Located in the throat of the boot, 4 channels are cut into the plastic to reduce the thickness of the material and thus provide smoother entry and better wrapping to the foot.

ENERGY FRAME: Specifically designed to reinforce the EDGE line shell structure, the Energy Frame lands more stability and performance to the boot.

TRI(BI)-INJ. FRAME:

A high performance, multi-density shell that optimizes easy entry, foot wrapping, comfort and energy transmission.

FLEX STANCE TUNING: Screw mechanism with a plate support on the spine of the cuff. By adding the screw(s) the link between shell and cuff becomes stronger and the flex of the boot stiffer. It also works as a forward lean adjuster.

FLEX TUNING: A screw mechanism on the spine of the cuff that links shell and cuff. To get a softer flex, the screw(s) can be replaced by the plastic caps included in the box.

INTEGRATED AUTOSKIWALK (ASW): HEAD patented integrated device which automatically switches between skiing and walking position when stepping in or out of the bindings.

POWER CONTROL FRAME:

Designed to reinforce the Cube 3 line shell structure in order to give more stability and performance to the boot

SKI-HIKE SYSTEM:

Is a device which allow the easiest selection of ski and hike mode available. Provides a powerful connection between the cuff and shell for maximum precision and impulse transmission while skiing.

SOFTWALK HEEL + GRIP SYSTEM: HEAD patented cushion positioned in the heel for shock absorption and smoother heel striker, without compromising the performance. The grip system is a rubber insert which provides grip for walking on slippery surfaces.

STIFFER/SOFTER FLEX ADJUSTMENT: It's an adjustment placed on the spine of the cuff to select between a stiffer or softer flex depending on snow condition and level of skiing.

SHOCK ABSORPTION WEDGE:

A rubberized boot board that allows for smoother riding over varied terrain and shock-free landings.

VIBRAM SOLE:

The bi-injected Vibram® sole allows safe hiking on all terrain while reducing shock absorption as well.

WOMEN SPECIFIC SUPPORTIVE HEEL OPTION:

A heel lift developed exclusively for women to be placed into the boot for optimized heel retention and maximum comfort.
