PROP TECH

Transversal ski flex release system.

In response to the new turn radius regulations issued by the FIS, we have worked hard on the actual structure of the ski in a bid to improve turn initiation and make handling more enjoyable. The result is the Prop Teck Technology. The Zicral top reinforcement layer is cut lengthwise at the tip of the ski for superior power transfer and ski control.

This technology is used by all our World Cup racers.

POWER TURN ROCKER

This ski has high traditional camber for 90% of its length, delivering power as well as excellent snowfeel and grip on the piste. A slight rocker over the remaining 10%, at the tip, makes turn initiation easier and more controllable.

10% / 90%
LOW ROCKER HIGH CAMBER

CASCADE TIP

This specific tip construction involves stepping the end-points of the top two layers, one metal and the other fiberglass. The objective is to reduce tip inertia and weight, giving a ski that is livelier and more receptive.

This construction also delivers better torsional control of the tip, for more effective grip and very high precision in turns.

ROSSIGNOL RACE DEPARTMENT RECOMMANDATIONS (SKIS, BINDINGS, BOOTS)

General Observations: Ski selection, both model and length, will always be a very personal and, to a large degree, a very subjective decision. The following chart shows some of the common trends we noticed as a result of our ongoing testing, which should be taken into consideration when making model and length decision. Optimal ski length is determined by the following order: ability, weight and strength. The Rossignol Race Department hopes you will find this information useful and wishes you an excellent winter of racing. Good luck at the races!
