UNIQUE

“Make life easier”

Lightweight, user-friendly, stable and high performance, the skis in our UNIQUE range offer simple and intelligent solutions to meet the needs of female piste skiers - with these skis, you will be slaloming down the piste like never before.

Say goodbye to difficulties and nerves for the best mountain moments ever!

The main technologies of the UNIQUE range are:

POWER TURN ROCKER

This ski is cambered over 90% of its length, delivering power, superior snow feel and excellent grip on the piste. The remaining 10% features a tip rocker for easier turn initiation and control.

AIR CORE

A light core is the key to making a light ski... To create the Air Core, we have replaced the conventional poplar with paulownia wood and hollowed the core out in its centre. The ski is up to 20% lighter, a compelling fact that no woman can ignore!

AIR SHAPE

The challenge was to increase the ski's durability while making it easier for women to carry. With a narrow bevelled profile along the edges of the ski and a wider tip and tail, Air Shape skis are perfectly suited to female hands at the front of the binding and meet the above two requirements.

TEMPTATION

“Give in to your adventurous side”

Lightweight, easy-to-handle and delivering supreme performance on both packed and powder snow, Temptation skis are your gateway to discovering every corner of the ski area. You can effortlessly change from the centre of the piste to the edge without any worries, and you can explore the mountain and discover a whole new range of sensations.

What are you waiting for? Slip on your Temptations and enjoy an unforgettable experience in the mountains.

The main technologies of the TEMPTATION range are:

AIR TIP

A patented technology exclusive to Rossignol! The tip is filled with air for maximum lightness and built to retain excellent torsional rigidity. The ski's weight is redistributed, freeing the tip and tail of the ski and providing greater ease, safety and versatility. The centre of gravity is closer to the centre of the ski, concentrating power under the skier's feet. THE ROCKER REVOLUTION IS HERE!!!

EXTENDED SIDECUTS

We have developed this extended sidecut to improve high-speed grip while increasing low-speed handling. By extending the sidecut far into the tip, the full length of the ski is in contact with the snow when the skier is angulating and travelling at speed. At lower speeds, rotation is easier thanks to the tip and tail rocker.

LIGHT WOOD (OR PAULOWNIA CORE)

Temptation skis boast a paulownia core. Paulownia is 30% lighter than other timber species, meaning that skis are easy to control and carry.

7-SERIES

“Forget technique, only sensations matter!”

Lightness, lift, ease and control... nothing else matches up to the truly liberating glide experience, no holds barred, and eons away from those early ski lessons when we had to push on our knees with our hands to be able to turn. A slight movement of the pelvis and the ankles, and the ski responds, positively skips, and turns effortlessly.

With Women 7-Series skis, you get to the end of a downhill run smiling from ear to ear, and you simply cannot wait to hit the slope again!

The main technologies of the 7-SERIES range are:

AIR TIP

This exclusive Rossignol technology has been masterminded for freeriding and wide open spaces! The tip is filled with air for maximum lightness and built to retain maximum torsional rigidity. The ski's weight is redistributed, the tip is lightened for greater ease, safety and float. The weight is concentrated at the centre of the ski to maximise control and power under the skier's feet. THE ROCKER REVOLUTION IS HERE!

POWDER TURN ROCKER

A profile with a 50% underfoot camber and a 50% rocker at the tip and tail. The slight underfoot camber gives the skis improved grip on packed snow. The tip rocker makes its presence felt, giving better flotation in powder snow and paving the way for new experiences without tiring the skier. The tail rocker gives better steering and control.

FREE VAS

The perfect link between the paulownia core and the Air Tip. VAS technology ensures superior comfort when switching from one snow type to another by minimising vibrations. VAS technology makes the ski easier to control, more stable and therefore more accessible. VAS also gives a smoother, more comfortable snow feel for even greater pleasure.

WOMEN COLLECTION

All the boots in the Women's range are designed to meet women's essential needs.

- **Respect for their anatomy** and body shape, with cuffs and liners specifically engineered to fit the female body shape.
- **Innovations** that are truly practical in terms of comfort and ease of use, including non-slip soles, Hike position, THINSULATE®, THINSULATE PLATINUM®, MERINO WOOL or natural wool thermal insulation.
- **The design of the liner is key** in terms of morphology and especially comfort, and materials are selected with great care.
- **Stylish-looking boots** with a definite feminine feel, promoting our beliefs and championing women's values.

WOMEN'S LINERS

ALL WOMEN'S SHELLS HAVE LINERS THAT ARE SPECIFICALLY DESIGNED TO SUIT THE FEMALE BODY SHAPE.

Women's liners are cut lower to accommodate women's calf shape. They also have a more open design for a more comfortable fit. The padding in the upper liner is very flexible to prevent any discomfort around the calf. The lining materials are very soft and comfortable.

Designed to make you want to put your foot in the boot.

HERMAL INSULATION

Dedicated thermal insulation: since insulation is especially important in women's boots, all our liners have specific thermal insulation in the form of THINSULATE®, THINSULATE PLATINUM®, MERINO WOOL, wool or polar fleece.

This liner has excellent thermal insulation thanks to the use of THINSULATE® and THINSULATE PLATINUM®. According to our laboratory-based thermal imaging studies, these technical fibres developed by 3M provide the best thermal insulation currently available on the market.

3M Thinsulate Platinum INSULATION

THINSULATE® PLATINUM:

This very thin fibre is used mainly in clothing thanks to its elasticity which supports freedom of movement. In a liner, it works ideally with the other materials to provide perfect foot support for great skiability.

3M Thinsulate INSULATION

THINSULATE®:

As a very thin fibre, it does not affect the technical properties of our liners, but enables excellent foot envelopment for great skiability.

MERINO WOOL

MERINO WOOL:

More than a thermal insulator, Merino wool is a natural thermal regulator. Its main qualities are:

- thermal control,
- soft feel,
- breathability,
- odour control,
- fast drying.

Used in the lining of ski boots, it provides very high thermal comfort in any conditions.

POLAR:

Polar fleece provides very good thermal insulation.

WOOL:

Familiar for centuries, natural wool is an excellent thermal insulator. It provides heat and comfort.

THE LINERS HAVE EITHER:

1. TOTAL THERMAL INSULATION

The insulator is all around the foot.

2. FOREFOOT THERMAL INSULATION

The insulator is around the forefoot in the toe area.

CUSTOM OPTISENSOR LINERS FOR WOMEN

The liners in the PURE range can be customised. After being heated in an oven, they can be ideally moulded to the shape of the skier's foot. See page 40 for more information about this process.

DEDICATED WOMEN'S CUFFS

The height of the cuff is significantly lower in comparison with a unisex cuff. The tulip-shaped rear section easily accommodates a woman's natural calf shape. It is less structured to take better account of female skiers' physiology.
