## Overlimit

World Cup Racing

### GS - Overlimit Plus

193	104,5-66,4-89,3	R>27
189	104,8-68,9-89,6	R>27
185	104,5-68,4-89,3	R>27
180	104,7-68,6-89,5	R>23

### GS - Overlimit

185	104,5-66,4-89,3	R>27
180	104,5-66,4-89,3	R>23
175	104,5-66,4-89,3	R>23

## LINEA GARA

Performanti su qualsiasi tracciato, ideali su terreni ripidi, duri e ghiacciati, quando la neve diventa "cattiva", quando hai bisogno di una ottima tenuta, stabilità, deformazione uniforme e di un continuo adattamento al terreno. Qualità tecniche esaltate dalla geometria laterale dello sci e dalla tecnologia costruttiva Sandwich e WoodCore.

## RACE CARVE COLLECTION

Per sciatori di standard tecnico elevato, ma non agonisti. Sci con le stesse caratteristiche costruttive e strutturali degli sci da gara, solo più facili e permissivi con un nucleo centrale che ricerca la stabilità e lo smorzamento delle vibrazioni. Prerogativa principale, una sciancratura vivace, agile, divertente e molto giroso.

## ALL MOUNTAIN

Sci multifunzione in "Sandwich Technology" per qualsiasi tipo di terreno e di neve, grazie ad una "spatola" più larga e ad una sciancratura accentuata. Sci da grandi emozioni in tutte le condizioni caratterizzate da stabilità e da flessibilità, che permettono un ottimo galleggiamento in "fresca" e una ottima conduzione in pista battuta.

## FREESKI

"Macchine da divertimento" che garantiscono stabilità in pista e ottimale galleggiamento in neve fresca nel fuoripista, grazie ad una base d'appoggio più larga, ad una struttura resistente alle grandi sollecitazioni cui sono sottoposte nelle condizioni più difficili.

## LINEA JUNIOR

Sci da gara per ragazzi, che competono ad alto livello, utilizzando le stesse tecnologie impiegate nella costruzione degli sci da adulto.

## RACE COLLECTION

Designed for use on whichever surface you wish, perfect for the steepest of slopes, ice-hard surfaces, and for when the snow is at its "meanest", when you desperately need an optimum grip, stability and consistency that a continually changing terrain will demand. Technically of the highest quality incorporating geometrical precision in ski manufacture as in Sandwich and WoodCore technology.

## RACE CARVE COLLECTION

Designed for technically advanced skiers, but non competition. Skis which incorporate precisely the same construction and physical characteristics as racing skis, but are rather more adaptable and flexible with a central core which facilitates stability and reduces vibration. The main objective – to provide a perfect equipment guaranteeing exciting sport for the determined skier to enjoy.

## ALL MOUNTAIN

Multifunctional skis in "Sandwich Technology" for every type of surface and snow, thanks mainly to a slice broader than normal and an exaggerated sidecut. An exciting prospect in all conditions typified by a stability and flexibility affording the very best buoyancy on fresh snow and yet a solid grip on worm slopes.

## FREESKI

"Dream machines" which guarantee stability on the slopes and yet optimum buoyancy on fresh off-piste snow thanks to a broader support base, allied to a construction which is resistant to the enormous strains which the most difficult conditions throw up.

## JUNIOR COLLECTION

Racing skis for youngsters who compete at an advanced level, adopting the very same technology employed in the manufacture of skis for adults.
