## PARABOLIC ROCKER TECHNOLOGY

PARABOLIC ROCKER is unique formula of parabolic sidecut and early rise rocker on Elan e-rise rental skis. Early rise rocker with lifted tip and tail is enabling easy turning and edge to edge transition. Parabolic sidecut has less radius in tip and tail than in the middle of the ski. Once the ski is on the edge and bent, the radius gets equal and you can make a perfect turn on the edge. Due to parabolic sidecut the skis initiate the turn much easier and at a much lower ski angle. You don't have to have aggressive ski angles to carve with Elan skis. Skis make your progression in skiing knowledge faster than any other rental ski on the market.

*PARABOLIC ROCKER è l'eccezionale formula che combina la sciancratura Parabolic e l'Early Rise Rocker nella collezione sci da noleggio Elan e-rise. L'Early Rise Rocker ha punta e coda sollevate che permettono facilità di curve e di passaggio da spigolo a spigolo. La sciancratura Parabolic ha meno raggio in punta e in coda rispetto al centro dello sci. Quando lo sci è in conduzione, il raggio diventa uguale e si può condurre una curva perfetta. Grazie alla sciancratura Parabolic lo sci consente di iniziare la curva molto più semplicemente e con un angolo molto inferiore. Con gli sci Elan non c'è bisogno di sciare con angoli di piega aggressivi per carvare. Gli sci ti consentono di imparare a sciare molto più velocemente di qualsiasi altro sci a noleggio sul mercato.*

Beim Parabolic Rocker handelt es sich um eine Kombination aus zwei Technologien. Der parabolischen Taillierung und dem early rise Rocker mit denen die E-Rise Verleihmodelle ausgerüstet werden. Bei der parabolischen Taillierung wird der Ski mit unterschiedlichen Radien über die komplette Skilänge versehen. Beim early rise Rocker werden die Skispitzen und Skienden leicht angehoben und machen den Ski damit sehr leicht drehbar und äußerst fehlerverzeihend. Das Ergebnis ist ein komfortabler, genussorientierter Ski für eine breite Zielgruppe.

*Le rocker parabolic est une formule unique associant des lignes de côte parabolique et le rocker early rise sur les skis de location Elan E-rise. Le rocker early rise avec sa spatule et son talon rocker facilite l'entrée en courbe et le passage d'une carre à l'autre. Les lignes de côte parabolique font que le ski à un rayon de courbe plus petit en spatule et en talon. Une fois que le ski est sur la carre et en courbe, le rayon devient linéaire et vous pouvez un virage parfait. Grâce aux lignes de côtes parabolic, les skis amorcent la courbe plus facilement et avec beaucoup moins d'angle. Vous n'avez pas besoin d'avoir beaucoup d'angles pour carver avec les skis Elan. Les skis rendent votre progression et votre apprentissage plus rapide et facile qu'avec n'importe quel autre ski de location sur le marché.*

- 1 EARLY RISE ROCKER:**  
for easier sliding and turn initiation / *facilita la scivolata e l'ingresso in curva* / für leichteres Driften und eine einfache Skikontrolle / *Facilite le dérapage et l'entrée en courbe*
- 2 PARABOLIC SIDECUT:**  
for easy carving through the turn / *per una facile conduzione della curva* / für maximale Unterstützung beim Carven / *Aide à carver en courbe*
- 3 FRONTSIDE STABILIZER:**  
keeping the ski stable on the edge / *mantiene stabilità dello sci sugli spigoli* / hält den Ski sicher auf der Kante / *Garde le ski stable sur les carres*

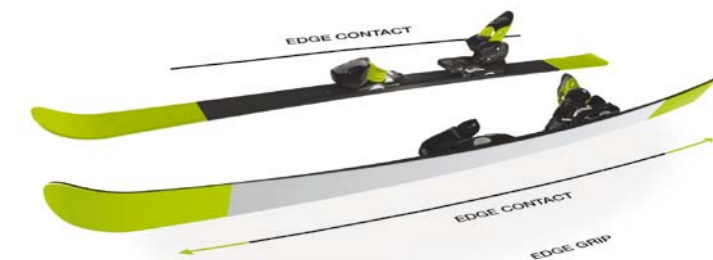

## EARLY RISE ROCKER PROFILE

When designing the new Exar eRise, We focused our rental design thinking on the learning process of the beginner and intermediate skier first. What we created is based on our well proven parabolic shape, but now incorporates a slight "early rise"-Elan's tempered answer to the current performance-based rocker skis. New for this season is the introduction of our EXAR Pro eRise junior rental skis. We know have the opportunity to bring the advantages of the eRise adult ski to our younger skiers.

*Quando abbiamo progettato il nuovo Exar and Rise, prima di tutto ci siamo concentrati sul come sia il processo di apprendimento di uno sciatore principiante e quello di uno intermedio. Quello che abbiamo realizzato è basato sulla nostra ormai collaudata forma parabolica, ma adesso utilizza anche un leggero rocker (Early rise) - La risposta temperata di Elan alle attuali performance degli sci rocker. La novità di questa stagione è l'introduzione del nostro sci da noleggio EXAR Pro eRise junior. Ora abbiamo la possibilità di portare tutti i vantaggi dell' eRise sugli sci dei nostri giovani sciatori!!*

Beim entwickeln des neuen Exar eRise haben wir das Design an den Lernprozess von Beginnern und Fortgeschrittenen angepasst. Diese Entwicklung basiert auf der bewährten parabolischen Form, aber nun auch mit einem leichten "early rise" - Elan's Antwort auf die derzeitigen performance Rockerski. Neu in dieser Saison ist die Einführung unserer EXAR Pro eRise Kinderleihski. Wir haben nun die Möglichkeit die Vorteile der eRise Erwachsenenski für die jüngeren Skifahrer verfügbar zu machen.

*Quand nous avons crée notre nouvel Exar eRise, nous nous sommes concentrés sur le processus d'apprentissage d'un skieur débutant et intermédiaire pour dessiner nos skis de location. Notre produit est avant tout basé sur notre construction parabolique si réputée mais inclut maintenant un léger rocker "early rise" - qui est la réponse sérieuse d'Elan aux qualités annoncées des skis rocker. La nouveauté cette année est l'arrivée de notre Exar Pro eRise, ski de location junior. Nous donnons maintenant la possibilité à nos skieurs les plus jeunes de profiter de la technologie eRise des skis adultes.*

## DURA SHIELD

Revolutionary Elan specific top sheet made out of the strongest polyamide material. 1 mm thick Fishbone structure protects the skis from impacts as the edges slide aside in the direction of the structure and thus do not cause damage to the top skin. The Fishbone structure is only on the side of the top surface of the skis where the most impacts occur. In the middle there is a flat stripe that can be used for placement of bar codes and stickers.

*L'utilizzo di un sistema unico, che utilizza diversi colori a seconda della lunghezza, permette una facile e veloce individuazione da parte del noleggiatore della misura prescelta e un'esposizione di sci di notevole impatto visivo per il cliente finale.*

Neue, einzigartige Skioberfläche aus extrem resistenten Polyamide Material. 1 mm starke Fischgrätenstruktur, die den Ski und die Oberfläche vor Schlägen und Kratzern entlang der speziellen Struktur schützt. Die spezielle Fischgrätenstruktur befindet sich nur an den exponierten Seiten der Skioberfläche. Der Mittelbereich ist flach und kann dadurch zur Anbringung der Barcodes und spezieller Aufkleber genutzt werden.

*Recouvrement extérieur révolutionnaire à Elan composé du polyamide le plus robuste sur le marché. Structure en chevrons de 1 mm d'épaisseur qui protège les skis lors des impacts. Les carres glissent dans la direction de la structure, protégeant ainsi la surface supérieure du ski contre les dommages.*

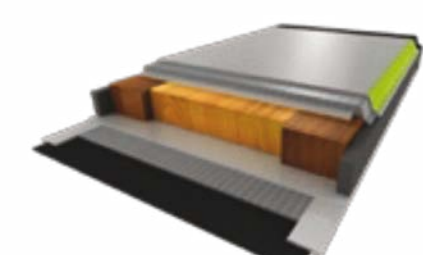

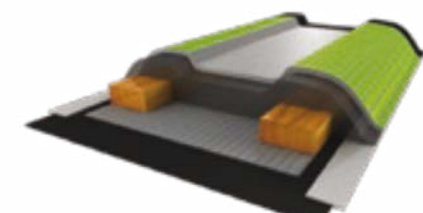

## SEMI-CAP CONSTRUCTION

Semi cap construction above the side-walls protects skis from chipping.

*Costruzione semi cap sopra ai fianchi come ulteriore protezione per gli sci.*

Semi Cap Konstruktion über den Seitenwangen schützt den Ski vor Oberflächenabspaltungen.

*La costruzione semi cap par dessus les chants protège les skis des éraflures.*
