description	Based on our popular mid-fat, this charging ski makes speed your friend, no matter what the conditions. LIMITED EDITION: Only 25 pairs of the Arrowsmith to be pressed this year.	An untamed, powder-loving beast, the mega-fat will change the way you see the mountain.	With its wide waist and soft tip, this ski will make you ski powder like you own it. The 2007 fat has 4mm more goodness underfoot.	The stalwart of the Kingswood range, the 185 midfat just got better. A bit of extra girth in the tip and tail means more sidecut for more responsive turning.	Comfortable on piste, the skinny is also unafraid to venture into the deep.	Same as 185cm fat but with more sidecut so the 170cm fat will carve more on harder conditions. This ski will take you everywhere without a care.	By popular demand, we've put a little something in the middle of the 170cm range. A happy compromise between the turn-y-er "skinny" and the powder-loving fat, the aptly named "mid-fat" is a reliable all-rounder.	This great little ski goes comfortably from piste to powder.
