

2011/2012

# SCOTT WINTER HARDGOODS

# 2011/2012 HARDGOODS

Since 1958, SCOTT has been providing the equipment needed to enjoy your day on the mountain. For some, enjoyment is being the best on hill or claiming a first descent/ascent. For others, it is the enjoyment of getting away from it all. At the end of the day, all those who live for the mountains get the same rush of euphoria, every time you set foot on snow.

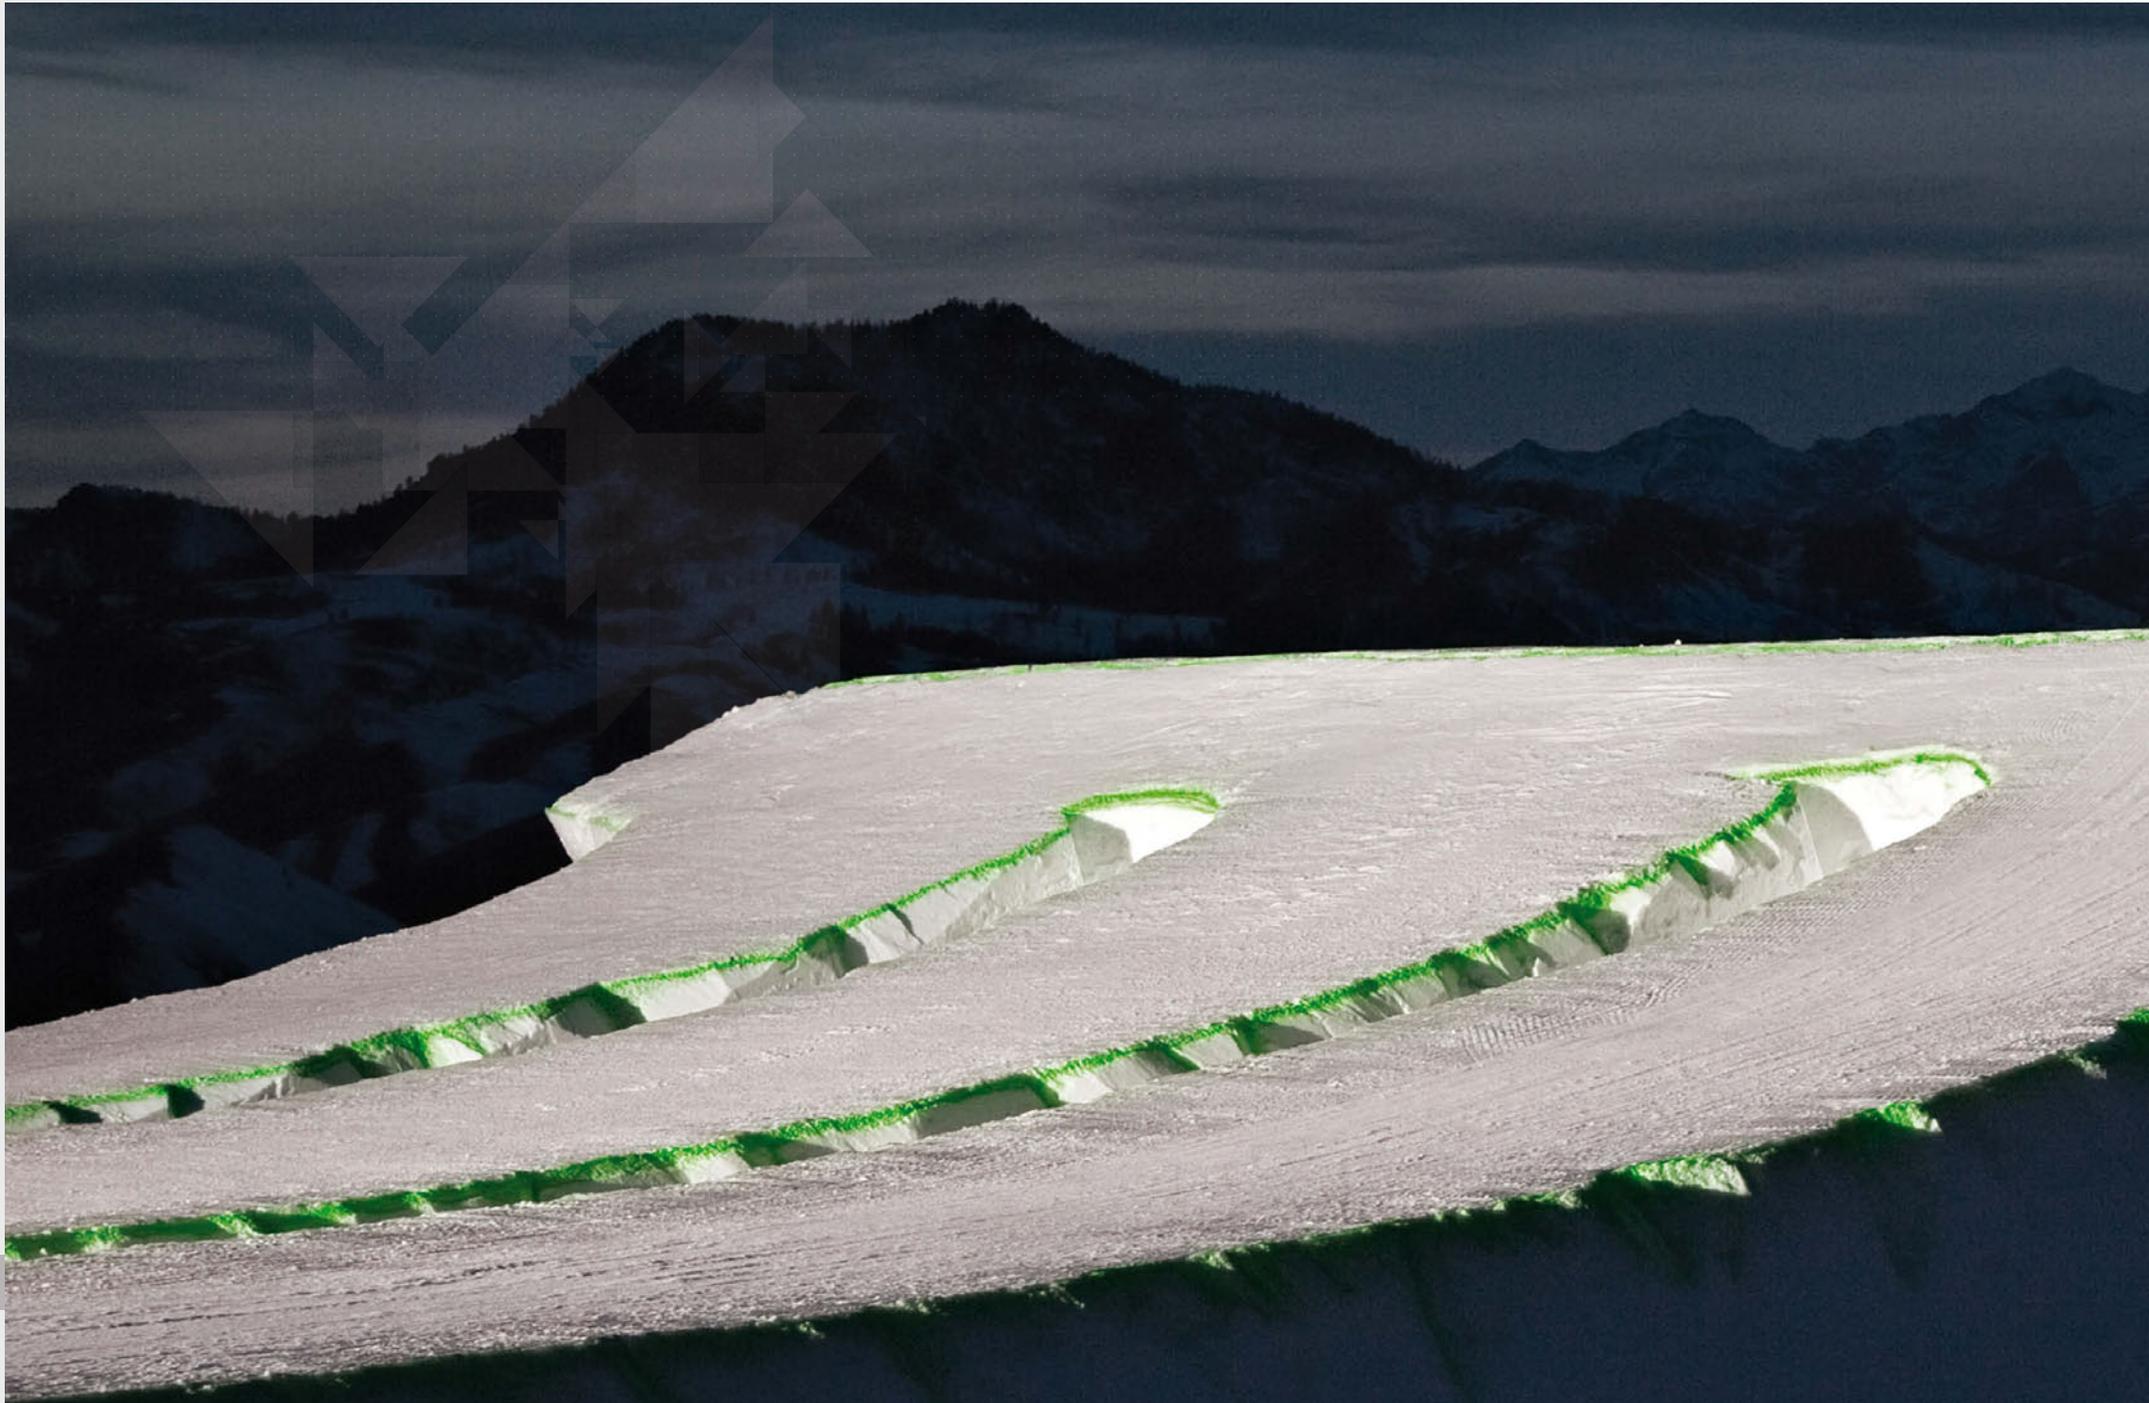

At SCOTT, we know following your passion takes commitment. Our company was founded on passion and the commitment to providing performance products. Innovation, technology, and design are what set SCOTT apart from competition. We produce the absolute best in goggles, sunglasses, skis, poles, and protection so you can enjoy every moment in any type of condition.

# 2011/2012 SKIS

For over a decade SCOTT has pushed the limits of ski innovation, providing our customers with the most advanced technology available so you can focus on enjoying skiing. NEW for 2011/2012, SCOTT is proud to deliver a complete line featuring updated models using our proven Venturi Tip and Tail, three new rocker technologies, and a variety of updated sizes and sidecuts. Three brand new skis, the Luna, Reverse and Venture, all featuring our revolutionary Venturi Rocker, have been added to the All Condition and Freeride category. The inspiration to develop new technologies came from feedback we've received from our team of world-class athletes and from our product management team that lives and breathes skiing.

# SCOTT ROCKER TECHNOLOGY

In 2002, SCOTT Sports developed the Santiago, a ski designed to perform in deep snow while maintaining edge control at high speeds and in steep terrain. SCOTT designers created a ski with an elongated tip, moving the point where the ski comes in contact with the snow further back from the front of the ski. Today, the ski industry calls this Rocker, a technology that has been part of the SCOTT ski line for over 9 years.

SCOTT Sports builds rockered skis with the goal of producing the best performing skis; products that improve the overall experience of the skier in any condition and terrain, not just what looks good on paper. The rocker technology found on SCOTT skis has undergone extensive testing and development by our product management team and world-class athletes to assure that the perfect balance of rocker is employed without compromising the overall performance of the ski. SCOTT is proud to deliver three specific Rocker Technologies: Pro-Tip Rocker, Venturi-Tip Rocker and Twin-Tip Rocker.

## PRO-TIP ROCKER

Combining a progressive shape with increased tip height and radius creates Pro-Tip Rocker. Scott's Pro-Tip produces a more consistent ski flex and predictable turns. SCOTT skis using Pro-Tip Rocker simply track better than the competition and are available in three heights catering specifically to the skis' intended use: 300mm (Precision On-Piste), 350mm (All-Mountain) and 375mm (Freeride).

## FEATURES

- + Skis more progressively and improves ski agility
- + Increases stability in powder and deep snow
- + Provides forgiveness, allowing skier to adjust turn shape

Pro-Tip Rocker 300

Pro-Tip Rocker 350

Pro-Tip Rocker 375

## TWIN-TIP ROCKER

Twin-Tip Rocker places Rocker on both the tip and tail of twin tip skis to allow for maximum float when riding both forward and switch. Tail Rocker also improves ski handling in powder by allowing the tail of the ski to sit deeper in the snow while bringing the tip up.

### FEATURES

- + Tip Rocker improves ski flotation
- + Twin-Tip for riding both forward and switch
- + Total domination in deep powder

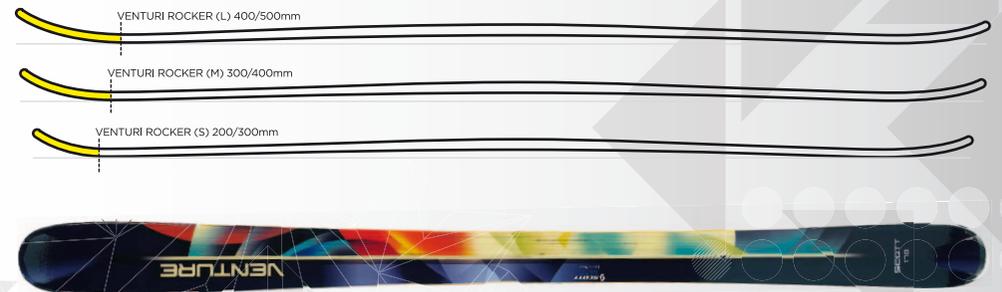

## VENTURI-TIP ROCKER

Venturi-Tip Rocker combines a hollowed shape with a rocker tip. The resulting Venturi-Tip Rocker design effectively decreases the skis' surface pressure in deep snow, while Rocker allows the tip to be elevated to the surface, yielding a highly versatile performer in both deep snow and variable conditions. The Venturi-Tip Rocker is available in three sizes: S,M,L

### FEATURES

- + Excellent float and turn initiation
- + Offers stability at high speeds in all conditions
- + Reduces surface pressure resulting in improved ski handling

- Venturi-Tip Rocker (S)  
R 200/300
- Venturi-Tip Rocker (M)  
R 300/400
- Venturi-Tip Rocker (L)  
R 400/500

# TECHNOLOGY

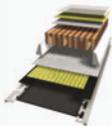

## SCOTT SKI CONSTRUCTION:

Every Scott ski is constructed with a hardwood core. We couple hardwood cores with five different Sandwich Sidewall Constructions (SSC) and additional technologies to make Scott skis the most fun skis to ski all day, everyday. Each model of Scott ski has a unique composition to guarantee the best possible construction for its intended use.

### SANDWICH SIDEWALL CONSTRUCTION (SSC)

Exclusively used for years in racing skis, SSC construction is what real skiers want. Coupling a hard wood core with a slanted sidewall produces a powerfully quick and extremely stable ski.

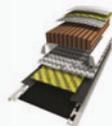

### SSCL LIGHT

SSCL Light incorporates lighter materials into the SSCL construction process making the ski lighter weight without sacrificing performance.

### SSCL LAMINATE (SSCL)

SSCL combines a laminate top and bottom sheet with classic Sandwich Sidewall Construction construction. SSCL skis are slightly more forgiving than SSC skis and remain equally responsive. SSCL ski have a specific braiding and laminate combination to guarantee the best possible construction for their intended use.

### SSCL TRIAX

SSCL Triax construction combines a reinforced triaxial laminate to deliver exceptional strong and lightweight skis.

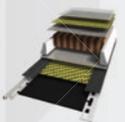

### SSCL CARBON

SSCL Carbon skis incorporate carbon into the SSCL construction process. Carbon is extremely lightweight and snappy and ideally suited for ski touring.

### SSCL VTT

SSCL VTT couples SSCL construction with Scott's VTT tip and tail concept. The result is a lively ski that performs exceptionally both on piste and off.

### SSCL TITANAL

This classic construction SSC combines a Titanal top and bottom; cap finish radius on the upper part of the construction for maximal protection

### SC FOAM ( SCF )

Utilizes a sandwich foam cap construction for light weight kids skis

## TECHNICAL FEATURES

### PRO-TIP ROCKER ( progressive tip radius Rocker )

SCOTT shows the way to control tip deformation on free ride skis, by using a progressive tip height radius; skis are driven by best flex behaviour and homogeneity of the tip in turns, thanks to progressive ski deformation. Pro-Tip Rocker 300 / Pro-Tip Rocker 350 / Pro-Tip Rocker 375

### VENTURI-TIP ROCKER

The way to avoid reliefs and bumps of the outbound terrains off piste. That technology helps skis for a better maniability, comfort and increase the speed with safety. Combined with Venturi, Venturi-Tip Rocker is a unique feature in the ski industry. Defined into 3 sizes: S, M, L

### TWIN-TIP ROCKER

A combination of twin tip ski shape and Rockers ; this geometry avoid all terrains hits and allows the skis to ride smoothly in crud deep and fresh snow conditions with an ease of use and forgiveness unequal

### VENTURI TIP & TAIL

A new specific geometry on tip & tail area which allows the skis to avoid too pressure of snow during initiating and completing the turns; skis becomes more liveliness and less hitting the heavy snow in off pist conditions.

### VENTURI TAIL

Already proved on the Pure ski that this features gives a better stability in turn completion in any quality of snow.

### DUAL RADIUS

Traditional skis have a fixed radius that determines the length of every turn. Scott skis combine two radii (dual radius) to create the sidecut or "shape" of the ski. By incorporating the Dual Radius concept, the ski can turn when you want it to turn; the result is a more versatile ski which is not confined to one type of skiing or terrain.

### FACTORY FINISH

Scott skis come direct from the factory ready to ski with Scott's factory finish. Every factory finished ski leaves the factory with side edges ground at 89° and base edges ground between 0.5° and 0.8° for exceptional performance. The base is finished with a micro structured CNC stone grind so you can mount your skis and hit the hill, no tuning required.

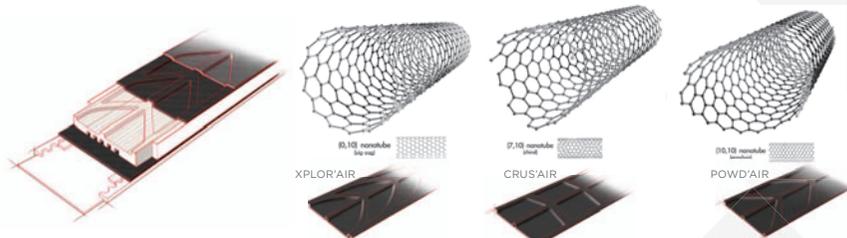

### PRE-TRACK

In developing Pre-Track, Scott designed skis with wide tips and/or slightly turned up tails. This allows for a variable effective edge depending on terrain. With Pre-Track, Scott skis employ a smaller effective edge for short radius turns on groomed slopes and a longer effective edge when making bigger turns or skiing off piste. The result is a more precise, stable, reliable and versatile ski.

### 3D CARBON FRAME

This innovative carbon laminate ski construction creates an exceptionally lightweight touring ski while dramatically increasing torsional rigidity and dynamic performance on steeps.

### 3D SIDECUT

This revolutionary new geometry combines 2 radii with a central flat line. This allows for Twin Rocker skis to drive off piste while still maintaining substantial edge hold on-piste.

### WOMEN'S SPECIFIC CONSTRUCTION

All Women's skis feature women's specific construction. Scott women's skis are designed to be light and lively while meeting the levels of performance that women skiers demand.

### SCOTT SKIN HOOK

In order to optimize the skin handling we have especially developed different skin hooks for each of the 3 skis (complete skin sets available) The Result: an easy and fast skin attachment in all weather conditions.

# 2011/2012 POLES

1958 marked the birth of SCOTT and revolution of ski poles, thanks to Ed Scott's invention of the first tapered aluminum ski pole. Ed Scott's ski pole would forever change the way we turn.  
In 2011, with the help of SCOTT athletes, Tom Wallisch, Simon Dumont, and Seb Michaud, SCOTT is proud to introduce a pole collection developed and inspired by the world's best athletes.

# POLE TECHNOLOGY

## PRECISION CONSTRUCTION PROCESSES

### ELECTRO-STATIC PAINT PROCESS

Scott aluminum ski poles undergo an electro-static paint process, delivering a clean, contemporary, highly durable finish.

### FILAMENT-WOUND ENGINEERING PROCESS

Scott composite poles undergo an automated filament-winding process whereby the shafts are machine-spun, producing an extremely consistent product.

### SWAGED SHAFTS

Scott aluminum ski pole shafts are engineered with an exclusive "swage", giving the pole a dual-taper design. Swaging is a process which utilizes a series of dies to reduce the outside diameter (creating the taper) and increase the wall thickness (adding strength). The taper results in an improved aerodynamic profile, lighter swing weight, and increased strength.

## ENGINEERED SHAFT MATERIALS

### CARBON FIBER

Carbon fiber, with its minimal weight and significant strength, is an ideal material for ski pole shafts. Carbon fiber reduces vibration and absorbs shock while improving feel and swing weight.

### CARBON MATRIX

Carbon matrix ski poles maintain all the positive attributes of carbon fiber while integrating fiberglass to create a carbon matrix that is both lightweight and strong.

### S4 ALUMINUM

Constructed with the strongest commercially available, aircraft-grade aluminum alloy, S4 Aluminum poles are twice as strong as the industry standard, rated to 75,000 PSI.

### S3 ALUMINUM

S3 Aluminum shafts are computer engineered and manufactured with high-grade aluminum that is rated to 65,000 PSI.

### S2 ALUMINUM

S2 Aluminum shafts utilize the same technical swaging and design features found in the S4 and S3 series and are rated to 45,000 PSI.

## ANATOMICALLY ENGINEERED GRIPS AND STRAPS

### EC-1 GRIP SYSTEM

The Scott EC-1 grip system perfectly integrates the grip and strap to provide an ergonomically correct fit for both left and right hands. A combination of injected plastics and minimal strap interference make this grip extremely comfortable and easy to grab.

### NOTCH STRIKE GRIP

The Notch Strike Grip has been anatomically engineered using soft thermoplastic rubber and polypropylene. The lightweight, streamlined profile facilitates the wrist articulation necessary for a textbook downhill tuck or grab.

### TECH-LIGHT GRIP SYSTEM

The Tech-Light Grip System features an ergonomically engineered soft EVA foam tube grip creating an extended grip surface. The Tech-Light Grips System is found on the X-Plor 3-part adjustable touring poles.

### P-CORE GRIP

The P-Core Grip features soft thermoplastic rubber that is injection-molded over a polypropylene core. Soft thermoplastic rubber demands significantly less strength to grip the pole.

### P-LITE GRIP

The P-Lite Grip is engineered to blend ergonomic comfort with material durability.

### JUNIOR NOTCH GRIP

The Junior Notch Grip is our Notch Strike Grip modified for smaller hands.

### JUNIOR JOYSTICK GRIP

Put down your video games, grab onto the Joystick grip and go skiing. Scott's anatomically engineered Joystick Grip is the answer for smaller hands.

### JUNIOR KNIGHT GRIP

The Knight grip is the little brother of the Joystick and our smallest grip.

## STRAPS

New for 2011, **THE LITE STRAP** is a high-performance strap developed using feedback from our International team of athletes. The strap is anatomically shaped to fit left and right increasing comfort and support for your hand and wrist. To reduce weight while maintaining comfort and durability, PU Kevlar was laminated with Micro Fleece resulting in an ultra lightweight strap that reduces interference between hand and grip.

### STRIKE RC

Strike RC straps are ergonomically engineered for right and left hand grips. They also feature a neoprene platform for increased hand support and a Velcro fastener for easy adjustment. Strike RC straps are found on the racing series.

### LEATHER CUFF STRAP

Back in the day, leather ruled the world of ski pole straps. Scott returns to its roots with the next generation of the leather strap featuring an easy adjust Velcro closure.

### RE-ENTRY STRAP

Scott's Re-entry Strap System featuring fast and easy adjustment with a buckle system. The Re-entry strap is found in combination with the P-Core Grip on selected S3 poles.

### COMFORT STRAP

Scott's Re-entry Strap System featuring fast and easy adjustment with a buckle system. The Re-entry strap is found in combination with the P-Core Grip on selected S3 poles.

### FX 15X25 STRAP

The FX 15X25 straps are designed with increased strap width on the back of the hand for additional support. The buckle is injection-molded nylon that exceeds a tensile strength of 800 psi.

### FX 24 STRAP

The FX 24 strap is a parallel strap. It features an over-molded buckle and is slightly slimmer than the FX 15X25 strap.

### JUNIOR ADJUSTABLE STRAP

The length and shape of the JR Adjustable strap is engineered to fit children's hands.

## AERODYNAMICALLY ENGINEERED POLE BASKETS

### DH CONE

The DH Cone was engineered and developed using a wind tunnel and computer-aided design. Combining the optimal integration of ultra-lightweight engineering and flowing aerodynamic lines, the DH Cone is intended to be no more than a shadow on the end of your ski pole.

### INTERCHANGEABLE BASKET SYSTEM

The Interchangeable Basket System includes both 8cm and 6cm diameter baskets and is found on the X-Plor 3-Part 18 adjustable touring pole.

### POWDER BASKET

The Powder Basket is designed for powder performance, excelling in traversing situations. The basket is a solid 9cm in diameter and has strategic holes to maintain a swing weight that is comfortable for everyday use.

### DEEP POW BASKET

Designed for bottomless pow, the Deep Pow Basket using a 9cm disk provides extra flotation preventing the pole from sinking any deeper than needed.

### RACE BASKET

The Race Basket is designed to minimize drag and wind resistance when racing. This basket is featured on our slalom race poles.

### SATURN BASKET

The Saturn Basket is designed for ski touring. The basket rests on a universal ball joint that allows for complete freedom of movement and stability in all hiking situations.

### 3.6 DISC BASKET

The 3.6 Disc Basket incorporates a high standard of engineering and design, blending aerodynamic efficiency and durability. The 3.6 disc basket is 6 centimeters in diameter.

### 3.8 DISC BASKET

The 3.8 Disc Basket is identical to the 3.6, with a slightly larger diameter for better performance in powder.

### TÜV BASKET

The TÜV basket is a high-performance, aerodynamic basket and is found exclusively on the JR 540 pole.

## ENGINEERED POLE TIPS

### CARBON DIAMOND TIP

Constructed using a composite matrix of state-of-the-art materials including carbon fiber, the Carbon Diamond Tip can withstand the harshest abuses.

### RACING TIP

The Racing tip is engineered specifically for racing and used by world class racers.

### ICE TIP

The Ice Tip is diamond shaped for unbeatable hold in extreme conditions.

### CONE TIP

The Cone tip is manufactured from hardened steel and designed for strength and durability.

### ANODIZED ADAPTER WITH CARBON ICE TIP

The Anodized Adapter, designed to strengthen the tip section of composite poles, is manufactured from aluminum alloy and pairs with the Carbon Ice tip.

### PA ADAPTER WITH AXE TIP

The PA adapter, designed to strengthen the tip section of composite poles, is manufactured from polyamide and features the Axe tip.

# 2011/2012 GOGGLES

SCOTT knows optics and we realize that vision is a key component to enjoying your day on the mountain. Since 1970, SCOTT has delivered the highest quality goggles to competitors and enthusiasts in both motocross and wintersports. **SCOTT Precision Optics** represents a strategic blend of superior materials and manufacturing which result in the highest quality, distortion free, UV protected, performance lenses available in the market today. **SCOTT Precision Optics** are found in all SCOTT eyewear products.

Our 11.12 collection offers a variety of style, innovation and performance. SCOTT is pleased to debut our new Global Art Edition goggles featuring designs from the worlds most creative and talented artists. In addition, we are proud to introduce our patent pending SCOTT Fit System on the Notice OTG. Continuously pushing the limits of technology, SCOTT provides our customers with the most innovative best performing products on the market.

**SPO** SCOTT  
PRECISION OPTICS

# GOGGLE FEATURES

## 100% UV Protection

Scott lenses are optically engineered to screen out 100% of harmful UVA/UVB/UVC rays.

## Air Control System (ACS)

ACS ventilation incorporates lens air intake vents on the goggle lens and frame air outtake vents on the bottom of the goggle. The result is a sophisticated ventilation system that helps prevent condensation and fogging.

## No Fog™ Anti-Fog Lens Treatment

Scott lenses undergo a permanent No Fog™ treatment process to prevent condensation and fogging.

## Scott Fit System

The Patent Pending Scott Fit System is a onetime mechanical adjustment that creates a custom face and nose fit; available on the Scott Notice OTG.

## Revolutionary Air Management System (RAM)

RAM is a patented frame ventilation system that directs airflow within the goggle by using a clean and controlled top-to-bottom pattern, eliminating “swirling air” and fogging.

## Helmet Compatibility

Scott goggles are engineered to engage flawlessly with a variety of helmets.

## Face Foams

### Molded hypoallergenic 3-Layer face foam

Molded hypoallergenic 3-layer face foam is Scott's best face foam, incorporating three layers of foam delivering a precise and comfortable fit.

### Molded hypoallergenic super-soft face foam

Molded hypoallergenic super-soft face foam is designed specifically to combat winter elements and provides a comfortable seal around your facial features.

### Hypoallergenic face foam

Hypoallergenic face foam is engineered to form a precise fit around facial features while sealing out the elements.

Scott Precision Optics represents a strategic blend of superior materials and manufacturing which result in the highest quality, distortion free, UV protected, performance lenses available in the market today.

Scott OptiView lenses are manufactured in Europe and adhere to the strictest testing standards. Scott's proprietary injection molding process and hard coat treatment guarantees that every OptiView lens is optically correct.

Scott TruView lenses are lightweight and block 100% of harmful UV rays. TruView lenses pass Scott's strict testing procedures delivering high-quality, performance lenses in select Scott goggles.

## solar blocker

Scott Solar Blocker lenses are designed specifically to block high-energy visible light and are for use on the brightest days. Through reducing the dazzling effect of the sunlight and eliminating the blur caused by unfocused blue light, Solar Blocker lenses enhance clarity and contrast.

## light sensitive

Scott Light Sensitive lenses employ photochromic technology and adapt automatically to sunlight intensity. Light Sensitive Lenses react to light changes; within seconds the lens will turn darker if the sunlight gets stronger or get lighter if the sunlight gets weaker.

## natural light

With the Natural light lenses, Scott has achieved neutral lenses that portray true color while dramatically enhancing clarity and contrast. The result is a clear view of your environment. Scott Natural Lenses also eliminate “eye shock.” Your eyes will be more relaxed as they are not forced to adjust to dominant colors found in traditional lenses.

## amplifier

Scott Patented Amplifier Lenses redefine how lenses cut through light and glare to deliver unprecedented levels of terrain definition in all light conditions. The secret to Amplifier technology is its ability to add contrast while increasing clarity and definition.

# SCOTT GOGGLES LENSES

## solar blocker

**SOLAR 4**  
Light Transmission: 5% Category: 4

The Solar 4 lens is the darkest Scott lens available and the answer for extreme sun situations.

**SOLAR 3**  
Light Transmission: 12% Category: 3

The purpose of the Solar 3 lens is to enhance your visual comfort on bright days.

## light sensitive

**LIGHT SENSITIVE BRONZE CHROME**  
Light Transmission: 45%-15% Category: 1-3

Light transmission adjusts automatically with Light Sensitive lenses. This allows the lens to cut glare, provide definition and enhance clarity in all light conditions.

## natural light

**NL-15 BLACK CHROME**  
Light Transmission: 15% Category: 3

NL-15 Black Chrome delivers proper contrast and a glare cutting chrome coating for sunlight conditions and performs in all levels of medium to bright light.

**NL-32 BLACK CHROME**  
Light Transmission: 32% Category: 2

Whether it is a sunny morning or a cloudy afternoon, the NL-32 Black Chrome lens is the choice for everyday optical perfection with a glare cutting chrome coating.

**NL-45**  
Light Transmission: 45% Category: 1

NL-45 performs in a variety of light conditions. The exceptional contrast detail allows the NL-45 to excel on overcast and flat light days.

## amplifier

**AMPLIFIER**  
Light Transmission: 32% Category: 2

The patented Amplifier lens is capable of deciphering exceptional detail in low light conditions while adapting perfectly for use on sunny days.

## amplifier

**LIGHT AMPLIFIER**  
Light Transmission: 45% Category: 1

Light Amplifier delivers proper contrast and correct light transmission for flat light and storm days.

## amplifier chrome

**SILVER CHROME**  
Base Color: Light Amplifier  
Light Transmission: 20% Category: 2

Silver Chrome is a great option for sunny to medium light days.

**PURPLE CHROME**  
Base Color: Light Amplifier  
Light Transmission: 23% Category: 2

Purple Chrome is a solid choice for variable days and works great in a variety of light conditions.

**YELLOW CHROME**  
Base Color: Light Amplifier  
Light Transmission: 23% Category: 2

Yellow Chrome is a solid choice for variable days and works great in a variety of light conditions.

**GREEN CHROME**  
Base Color: Light Amplifier  
Light Transmission: 27% Category: 2

Green Chrome is a solid choice for variable days and works great in a variety of light conditions.

**BLUE CHROME**  
Base Color: Light Amplifier  
Light Transmission: 35% Category: 2

Blue Chrome is great for days when the weather keeps changing.

**RED CHROME**  
Base Color: Light Amplifier  
Light Transmission: 44% Category: 2

When it's dumping or overcast but you want a chrome lens, Red Chrome is the answer.

## natural light

**NL-40**  
Light Transmission: 40% Category: 2

NL-40 performs in a variety of light conditions. The exceptional contrast detail allows the NL-40 to excel on overcast and flat light days.

## amplifier

**AMPLIFIER**  
Light Transmission: 32% Category: 2

The patented Amplifier lens is capable of deciphering exceptional detail in low light conditions while adapting perfectly for use on sunny days.

**LIGHT AMPLIFIER**  
Light Transmission: 45% Category: 1

Light Amplifier delivers proper contrast and correct light transmission for flat light and storm days.

### SUNNY

Lenses suitable for sunny or bright conditions.

# GLOBAL ART EDITION

## SEVEN ARTISTS, SEVEN CONTINENTS, ONE WORK OF ART.

Inspired by the traditional chain letter, this project involved the global art community through collaboration. Seven artists were selected to represent the seven different continents of the globe. The artwork began in North America before travelling around the world. Each artist added onto the work of the previous artist to achieve one finished work of art.

**NORTH AMERICA**

**LLOYD WINTER**

Portland, USA  
[lloydwinter.com](http://lloydwinter.com)

Lloyd is a teacher turned designer, a believer in collaboration, a hands-on hand-made enthusiast, a father-husband, and still a teacher in many ways.

**SOUTH AMERICA**

**GRINGO**

Sao Paulo, BRAZIL  
[henriquelima.com](http://henriquelima.com)

An animator, designer, illustrator and artist, Gringo's passion lies in drawing and creating. Gringo collaborates with various artists to create momentous works for companies, galleries and street artworks.

**AFRICA**

**JASON PETER DE VILLIERS**

Cape Town, SOUTH AFRICA  
[furtheraesthetics.com](http://furtheraesthetics.com)

Further is an illustrator/Graphic designer who works in both traditional and digital mediums. He is a firm believer that style bows to concept, and as a result has developed different styles that change according to the context of the project.

**EUROPE**

**MISS LED**

Islington, ENGLAND  
[missled.co.uk](http://missled.co.uk)

The first woman who has ever won the internationally renowned urban street art competition "Secret Wars". Her artwork has been featured in magazines, flagship stores and products around the world.

**ASIA**

**SHADOW CHEN**

Ningbo, CHINA  
[saltyshadow.com](http://saltyshadow.com)

Shadow is a commercial artist, illustrator and designer. Her unique style has been published in illustration annuals, featured in galleries, and appreciated around the world.

**OCEANIA**

**CHELSEY FREYTA**

Burleigh Heads, AUSTRALIA  
[chelseymfreyta.com](http://chelseymfreyta.com)

Chelsey is an international artist, illustrator and designer. Her line of original hand made accessories can be found exclusively in boutiques throughout North America and Australia.

**OCEANIA**

**LISA ROBERTS**

Newtown, AUSTRALIA  
[lisaroberts.com.au](http://lisaroberts.com.au)

Lisa Roberts is an artist whose practice is based on drawing and human movement. She is one of the few artists in the world who has lived, studied and created art in Antarctica. Her work on the continent contributed to her PhD at the College of Fine Arts, University of New South Wales.

**NEW** NOTICE OTG **GOGGLE**

[ THE NEW GENERATION OF SCOTT GOGGLES ]

## INTRODUCING THE SCOTT FIT SYSTEM

New for 2011, the Notice Over The Glass (OTG) goggle comes equipped with Scott's revolutionary patent pending Fit System. The Fit System allows the rider to customize the goggle using a cam located on the bottom of each side of the goggle. The Fit System has four adjustments that move the lower part of the goggle 4mm with each adjustment. The adjustment not only moves the cheek area but also increases or decreases the area around the nose helping to achieve a precise and comfortable fit. With a tighter fit, the Notice OTG goggle optimizes face fit while preventing unwanted nose pinch and discomfort.

# 2011/2012 SUNGLASSES

SCOTT's commitment to produce the finest products available is transcended into our Sunglass Collection. Using our competence in optics and credible experience as a goggle manufacturer, SCOTT Precision Optics ensures our products offer the finest quality, performance and design.

**SPO** SCOTT  
PRECISION OPTICS

# TECHNOLOGY

## SUNGLASSES FEATURES

### SCOTT PRECISION OPTICS

SCOTT Precision Optics represent a strategic blend of superior materials and manufacturing which result in the highest quality, distortion free, UV protected, performance lenses available in the market today.

### 100% UV PROTECTION

Scott lenses are optically engineered to screen out 100% of harmful UVA/UVB/UVC rays.

### SCOTT FUSION FRAME CONSTRUCTION

Fusion Frame Construction integrates virtually indestructible, lightweight, and abrasion resistant materials. Grilamid TR90, is a material used during Fusion Frame Construction that is incredibly resilient, flexible and undeniably comfortable. Fusion Frame Construction is employed in the production of all Scott Sport sunglass frames.

### SCOTT THERMAL FRAME CONSTRUCTION

Thermal Frame Construction is the process in which frame material is produced using longer injection times resulting in stronger more durable frames. Thermal frame construction is employed exclusively in Scott Sport Fashion sunglasses.

### EASY CHANGE LENS SYSTEM

A simple and efficient way to change the lens in your sunglass. Simply push the button located on the inside of the frame above the nose piece and gently remove the lens or lenses. Place the new lens in, press the button back into place and you're good to go.

## SCOTT PRECISION OPTICS

Scott Precision Optics is a quality label which represents a strategic blend of superior materials and manufacturing techniques. We combine selected materials with innovative technologies to offer a 100% UV protection on well performing lenses.

Scott OptiView lenses are manufactured in Europe and adhere to the strictest testing standards. Scott's proprietary injection molding process and hard coat treatment guarantees that every OptiView lens is optically correct.

Scott utilizes premium Italian glass and adheres to the most stringent manufacturing and testing standards to deliver the finest glass lenses on the market. Scott glass sets the standard for optical performance.

Scott Polarized lenses are designed to diminish dazzling reflections caused by reflected light off of flat surfaces such as snow and water. By separating useful light from white light, Scott polarized lenses cancel out all dazzling light. This polarization process eliminates light that distorts color, but guarantees a depth perception and improves vision. The result is clean lenses that deliver proper clarity and contrast achieving optical perfection.

Scott Solar Blocker lenses are designed specifically to block high-energy visible light and are for use on the brightest days. Through reducing the dazzling effect of the sunlight and eliminating the blur caused by unfocused blue light, Solar Blocker lenses enhance clarity and contrast.

Scott Light Sensitive lenses employ photochromic technology and adapt automatically to sunlight intensity. Light Sensitive Lenses react to light changes; within seconds the lens will turn darker if the sunlight gets stronger or get lighter if the sunlight gets weaker.

With the Natural light lenses, Scott has achieved neutral lenses that portray true color while dramatically enhancing clarity and contrast. The result is a clear view of your environment. Scott Natural Lenses also eliminate "eye shock." Your eyes will be more relaxed as they are not forced to adjust to dominant colors found in traditional lenses.

# 2011/2012 HELMETS

For over two decades, our engineers and design team have constantly pushed the design envelope with innovations that have not only increased helmet safety but have also improved product performance and comfort. This year we're proud to continue setting the standard of product innovation and safety thanks to key technologies such as: SCOTT's Biomex Technology providing best protection, S and G-venting systems, and designs that are goggle compatible providing optimal fit and air circulation.

# SCOTT ANTI HELMET

NEW

The first of its kind, the new SCOTT ANTI helmet features progressive styling and innovative features. Behind the clean lines, strategically placed vents can be found providing riders with the right amount of air flow controlling body temperature and helps to prevent goggle fogging. Added features include Scott's Universal Goggle Strap Retainer and Hat Lock Fit System to ensure stability, comfort and performance.

## SCOTT ANTI RIM PIECE

To avoid chin and ear straps' interfering with the rider a lower rim piece has been added to conceal both straps for a clean non-obstructive design.

## SCOTT HAT LOCK SYSTEM

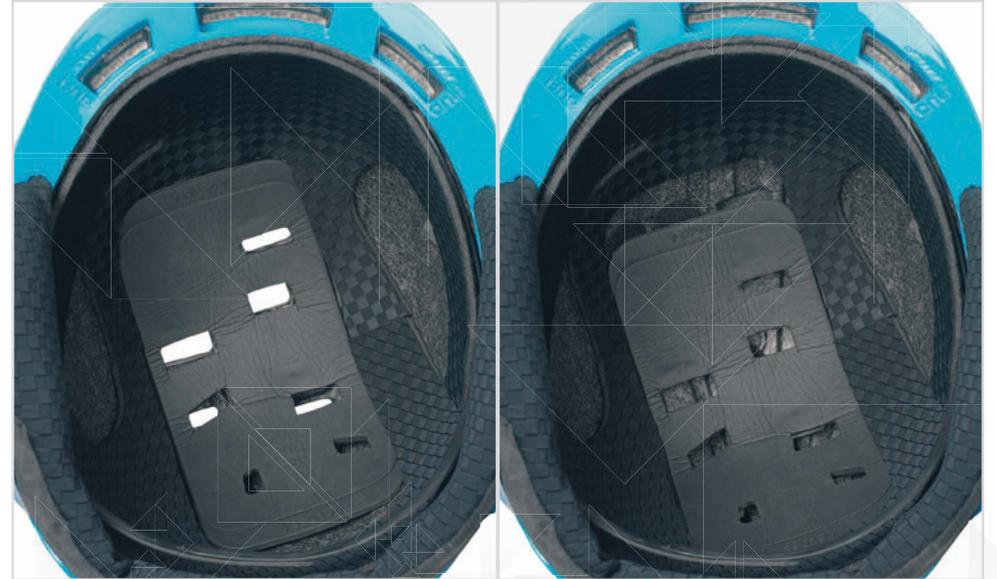

The Scott Hat Lock System is the perfect fit solution for progressive helmets. Using a minimal amount of material, the Scott Hat Lock Fit System is easily adjustable without the bulk.

## SCOTT COOL PLUG SYSTEM

The Scott Cool Plug is an innovative venting solution for progressive helmets. More than a common vent plug, the Scott Cool Plug is integrated on top of the helmet. By simply adjusting the Cool Plug inside the helmet, the right amount of airflow can easily be achieved. Exhaust ports remove stagnant air helping to circulate fresh air inside the helmet.

## UNIVERSAL GOGGLE STRAP RETAINER

The universal goggle strap retainer allows the user to use the strap retainer inside or outside of the helmet. When wearing your goggle strap inside the helmet, un-lock and flip the strap retainer placing it inside the helmet through the top vent hole. The bottom of the retainer is held securely on both sides by use of a magnet.

# TECHNOLOGY

---

## PC IN-MOLD CONSTRUCTION

During the In-Mold manufacturing process polycarbonate material, used on the outer shell, is fused with the helmet's impact absorbent foam liner creating a super lightweight outer shell. With reduced weight and bulk surrounding the head, In-Mold helmets are more comfortable than traditional helmets.

### MODELS BUILT USING PC IN-MOLD CONSTRUCTION INCLUDE:

ROVE/ ROAM  
ANTI  
CHASE/ JADE/ TRACKER  
SHADOW III Jr.

## ABS CONSTRUCTION

ABS construction provides optimum strength, shock absorption and maximum durability, while a unique and carefully engineered EPS liner provides comfort and added protection.

### MODELS BUILT USING ABS CONSTRUCTION INCLUDE:

ENVY  
RUMBLE  
TROUBLE/ BUSTLE  
WC PRO/ WC COMP

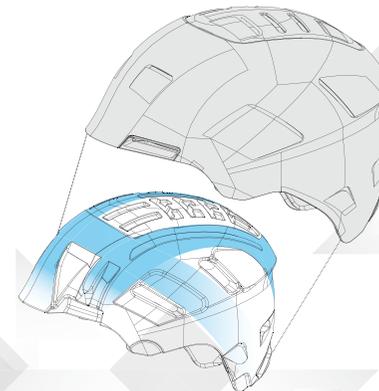

## BIOMEX TECHNOLOGY

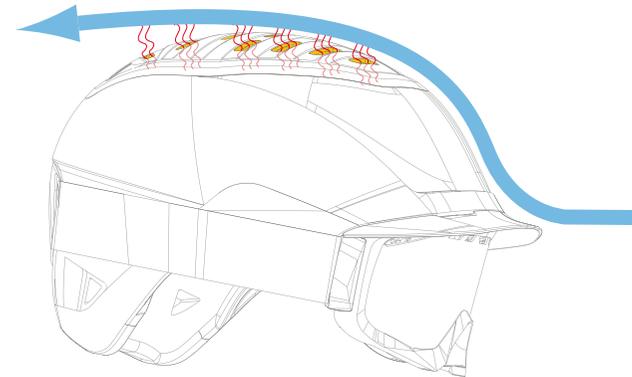

Scott helmets using BIOMEX Technology feature a structural inner Dual Band roll cage, which provides protection on the front, side, and rear increasing the strength and integrity of the helmet.

A new shock absorbing pad made from d3o™ material has been added to the back of the inner lining providing additional protection from impacts to the back of the head.

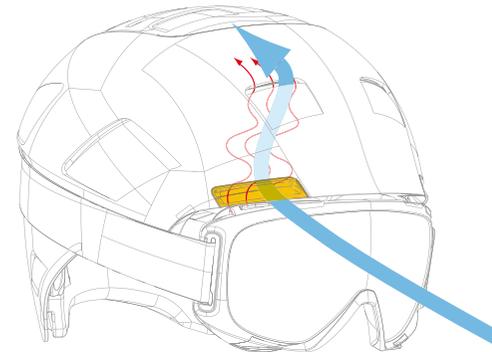

## THE SCOTT ACTIVE S-VENT SYSTEM

The top of the head generates the most amount of heat. Placed on the top of the helmet, the Scott Active S-Vent system are adjustable vents, that when opened, channel air over and around the riders head removing warm-stagnant air from the helmet. The vacuum affect created when the S-vents are open is easily adjustable allowing the rider to determine the right amount of airflow.

## THE SCOTT G-VENT SYSTEM

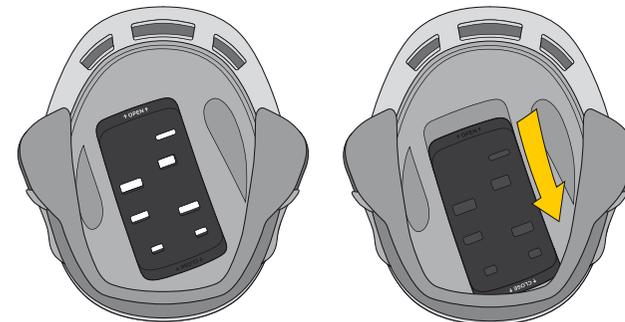

By reducing goggle fogging and increasing helmet airflow, the Scott G-Vent system is the most advanced helmet venting system. Intake vents placed on the helmet visor, just above the goggle, pull air through the goggle frame removing stagnant air known to be the cause of goggle fogging. Stagnant air is then channeled away using exhaust vents located on top of the helmet. The result is venting system that allows your goggle and helmet to breath more efficiently.

## THE SCOTT COOL PLUG SYSTEM

The SCott Cool Plug is an innovative venting solution for progressive helmets. More than a common vent plug, the Scott Cool Plug is integrated on top of the helmet. By simply adjusting the Cool Plug inside the helmet, the right amount of airflow can easily be achieved. Exhaust ports remove stagnant air helping to circulate fresh air inside the helmet.

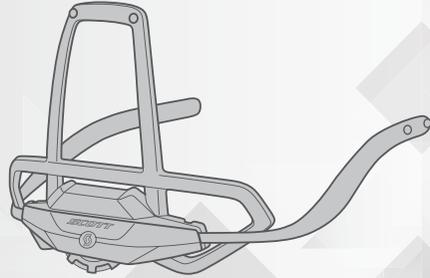

# TECHNOLOGY

## M-R.A.S FIT SYSTEM

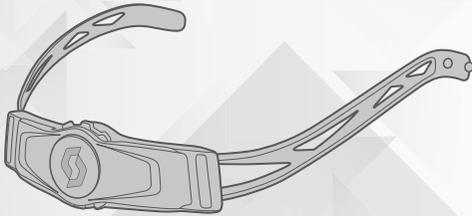

The Micro Rotary Adjustment System (M-R.A.S) offers unparalleled adjustment, comfort, and stability. Using an automatic lock system, helmet fit is held securely in both directions. The M-R.A.S Fit System is built on a flexible structure providing added comfort when fit on the rider's head.

## R.A.S FIT SYSTEM

The user friendly Rotary Adjustment System (R.A.S.) provides a custom fit for maximum comfort.

## SCOTT HAT LOCK FIT SYSTEM

The Scott Hat Lock System is the perfect fit solution for progressive helmets. Using a minimal amount of material, the Hat Lock Fit System is easily adjustable without the bulk.

# BODY PROTECTION

For years, SCOTT has worked with our international team of athletes to create the most advanced body protection available today. Our line offers protection for everyday users and for those pushing themselves beyond the limits on and off piste. In a sport that progresses at such an incredible rate, safety becomes more and more of a necessity and not just an option. The NEW 2011/12 hard and soft plate protection line is an example of SCOTT's continued commitment to provide protection and performance in every product we produce.

# CONSTRUCTION HARDSHELL

## SCOTT VERTEBRAE PROTECTIVE TECHNOLOGY

The Scott Vertebrae Protective technology combines innovative hard outer plates with a structural layering system allowing the protector to move with your body. The plate system mimics the vertebrae articulating in 3 axes to ensure free lateral, extension and compression movements resulting in complete freedom of movement and the highest level of protection. Our system passed a level 2 CE 1621-2 motorcycle standard making it one of the highest rated protective systems available today.

### FULLY ARTICULATED HARD PLATES

Hard plates are made from a plastic material known for high resistance to shock and abrasion. The plates are connected using an innovative rivet system allowing the plates to flex with the body. The added, unrestricted flex, maximizes comfort and freedom of movement. Protectors equipped with fully articulated hard plates offer the highest level of safety without sacrificing comfort and performance.

### HONEYCOMB LAYER

The lightweight honeycomb layer protects against high-energy impact and increases breathability.

### STRUCTURAL FOAM LAYER

The structural foam layer promotes movement and flexibility, engaging when necessary to protect and distribute shocks over the entire protective surface.

Standard: CE EN 1621-2

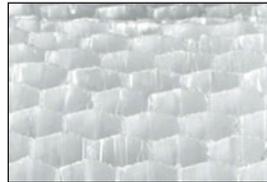

## SCOTT X-ACTIVE TECHNOLOGY

SCOTT X-ACTIVE TECHNOLOGY FEATURES MANY OF THE SAME PROTECTIVE FEATURES AS THE SCOTT VERTEBRAE PROTECTIVE SYSTEM. ARTICULATED PLATES EXTEND AND COMPRESS PROVIDING SAFETY AND A PRECISE FIT. AN ENGINEERED FLEX ZONE HAS BEEN ADDED TO THE LOWER PART OF THE PROTECTOR PROVIDING INCREASED COMFORT AND FREEDOM OF MOVEMENT

### ARTICULATED HARD PLATES

Hard plates are made from a plastic material known for high resistance to shock and abrasion. The plates are connected using an innovative sliding system, which allow the plates to move in multiple directions providing freedom of movement and comfort.

### HONEYCOMB LAYER

The lightweight honeycomb layer protects against high-energy impact and increases breathability.

### ERGONOMICALLY SHAPED FOAM LINER

Ergonomics and riding comfort are achieved thanks to an engineered flex zone located on the lower part of the foam liner, stretchable fabrics and non-obtrusive foam padding.

Standard: CE EN 1621-2

# CONSTRUCTION SOFTSHELL

## SCOTT CR SOFT FLEX TECHNOLOGY

THE SCOTT CR SOFT FLEX SYSTEM WAS DEVELOPED TO EXCEED THE SAFETY STANDARDS OF TODAY'S SKIERS AND SNOWBOARDERS. THIS REVOLUTIONARY SYSTEM ALLOWS FOR FREEDOM OF MOVEMENT WITHOUT SACRIFICING PROTECTION THANKS TO USE OF THREE INDEPENDENT D3O™ BACK PLATES AND AN IMPACT ABSORPTION LAYER MADE FROM DEFLEXION™, A PATENTED SILICONE MATERIAL.

### D3O™ ARTICULATED PLATES

d3o™ intelligent shock absorption is a patented shock absorbing material engineered with intelligent molecules. It is a rate-sensitive material, meaning when moved slowly the molecules flow freely, making it soft and flexible. At high speeds (like an impact) the molecules lock together, making the material an excellent shock absorber.

Unique to SCOTT, our protector is built utilizing three, fully articulated, 12mm in thickness, low profile d3o™ plates. Increase air circulation is achieved due to hexagonal holes located throughout the plates

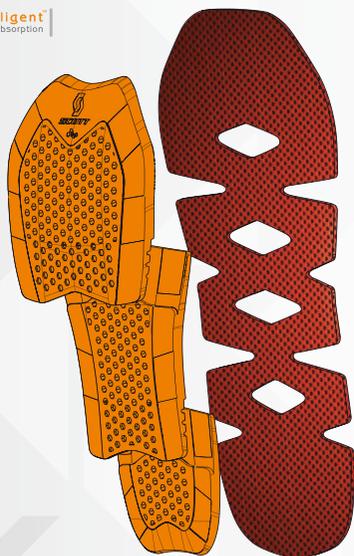

### STRUCTURAL ABSORPTION LAYER IN DEFLEXION™:

DEFLEXION™ technology, a shock absorbing, high performance material, uses silicone technology to create unique impact protection solutions. It provides protection without the stiffness of traditional padding and body armor. As part of the CR Soft Flex System, DEFLEXION™ provides greater comfort than traditional materials without compromising protection, and is breathable and washable.

Standard: CE EN 1621-2

# BACK PROT. SCOTT SOFT FLEX CRX

SCOTT CR SOFT FLEX TECHNOLOGY DELIVERS UNPARALLELED SAFETY WITH ITS USE OF INNOVATIVE IMPACT ABSORBENT MATERIALS, ERGONOMIC FIT, AND UNPRECEDENTED COMFORT. THE RESULT IS A REVOLUTIONARY BACK PROTECTOR WITH INCREASED PROTECTIVE COVERAGE AND UNPARALLEL FREEDOM OF MOVEMENT.

## ULTIMATE FREEDOM OF MOVEMENT

The plates on the Soft Flex CRX are built using three-interlocked d3o plates that follow the natural curve of your back flexing freely as you move. The liner in Deflexion™ material offers a second layer of protection. The liner is constructed using 3 dimensional spacer fabrics impregnated with specially formulated silicones. The two layers are assembled using strategically placed straps to minimize restriction and fit comfortably.

DEFLEXION

HEXAGONAL HOLES IN THE D3O MATERIAL

## HIGH BREATHABILITY

The new CR Soft Flex CRX is designed using vented materials and has several opening throughout the protector allowing for adequate airflow. Air is well circulated thanks to the hexagonal holes in the d3o material and open weave structure in Deflexion.

## ADJUSTABILITY OF THE VEST

The vest can be adjusted to fit a wide range of sizes:

- The upper straps on the shoulders allow the rider to adjust how the protector fits on the back.
- The side straps allow the protector to fit securely against the rider's body.

The half vest system is designed to alleviate abdominal pressure and increases comfort.

- + Zippered pocket

# BACK PROTECTOR SCOTT X ACTIVE

The SCOTT X Active back protector utilizes a plate system that follows the natural curve of your back. Interlocking plates, engineered with flex zones in critical areas, slide easily when compressing and extending allowing your body to move freely.

## THE RIGHT FLEX AT THE RIGHT PLACE

Flex zones were added in areas where the body flexes the most and requires unrestricted movement. The flex zone located on the lower part of the protector was designed using longer slots, connecting plates that allow the lumbar part of your back to move freely assuring your body has ample freedom of movement.

To maintain flex and breathability, excess foam has been removed and concentrated in areas where protection is needed the most. The foam layers used are articulated causing minimal interference when standing up straight, but come together for full coverage of the spine, as well as providing your upper and lower back full protection.

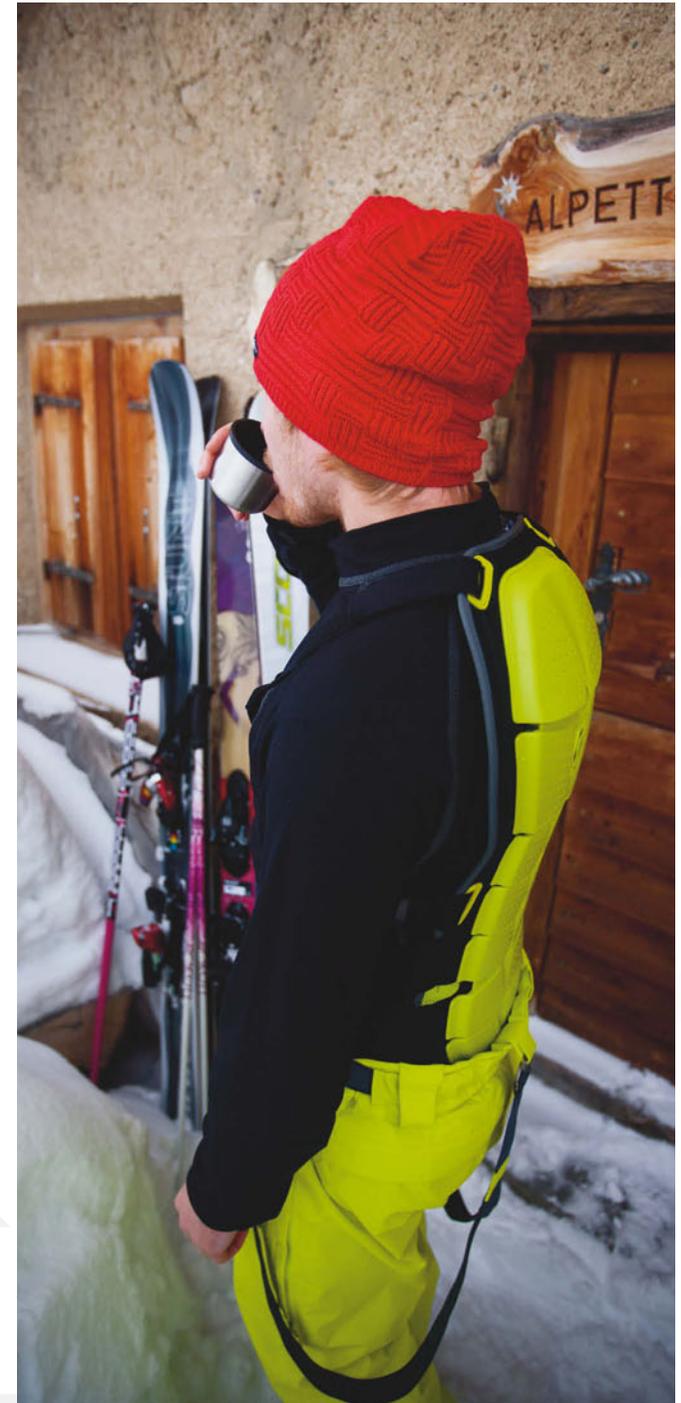

## BREATHABILITY

You won't overheat, since air can easily pass through the protector's lightweight perforated plates.

## FIT

The Velcro belt system has a double adjustment, providing a versatile unrestricted fit. The X Active system has a shoulder strap and vest system specially designed to fit women.

Standard: CE EN 1621-2

red

## BACK PROT. SCOTT CRX #220401
