SKI & SNOWBOARD COLLECTION

07/08

PROLOGUE

The history of Sporten skis dates back more than 100 years. Skis were handcrafted in small workshops in our Highlands in those times and every pair was an indisputable original. Much has changed since then but one thing has stayed the same throughout those years – the craftsmanship of the local people and their love of nature and skiing.

Today Sporten is a successful Czech company with an unusually broad product range of cross-country skis, alpine skis and snowboards supplying not only the domestic market. Most of our skis complete on demanding markets in Europe, the USA, Australia and Japan.

Our philosophy is to produce high-quality skis at an affordable price that would make skiing accessible and enjoyable. We see our reward in the satisfaction of our customers.

SPECIAL RACE alpine

AHV 07 SL

A brand-new top model from Sporten's premium line, a top tuned racing and high performance slalom ski for the most demanding skiers.

A classic sandwich construction with two layers of titanal provides excellent grip, quick edge change and a dynamic exit. A progressive tip shape (FLF) supports an easy and quick turn initiation. Racing edges, ABS sidewalls, increased dampening, a top base, racing tune. The most perfect ski together with AHV 07 GS that Sporten has ever developed.

WOOD.CORE

Nr. IA02

AHV 07 GS

A brand-new top model from Sporten's premium line, a top tuned FIS-legal GS racing ski for the most demanding skiers.

A classic sandwich construction with two layers of titanal guarantee excellent grip, stability in high speeds, powerful acceleration and a dynamic exit. Racing edges, ABS sidewalls, a top base, racing tune. Together with AHV 07 SL the most perfect ski that Sporten has ever developed.

WOOD.CORE

Nr. IA01

AHV JUNIOR

A racing ski specially developed for young racers. A new sidecut and new materials including a high-molecular base take the torsional rigidity, flex distribution and glide performance to a new level.

EASY.FLOW

Nr. IA03

SPECIAL AERIAL

AERIAL / WINTER, SUMMER /

Special aerials skis for World Cup racers. The ski of the **Salt Lake City 2002** Olympic Champion Ales Valenta is nicknamed „Valentovsky“ to honor Sporten's skier Nr. 1. Both winter and summer (water training) versions, each with a slightly different construction.

JUMP

JUMP SKIS

Competition jumping skis from Sporten are under a systematic development program fueled by valuable feedback from our top athletes. In shorter lengths also available as a lightweight-core version for junior racers.

Nr. IJ01

SNB

X RACE

A cross board specially developed for racing. A core consisting of many pieces of selected wood in combination with several layers of triaxial fiberglass offers an excellent torsion rigidity. A sandwich construction with ABS sidewalls, inserts moved backwards and a wider tip allow racers an aggressive ride and excellent handling.

WOOD.CORE

Nr. IA04

TECHNICAL SPECIFICATION

SPORTEN // Super VarioFlex

The VarioFlex plate offers three basic improvements: **better carving, better handling and a better grip.**

Advantages of the Super VarioFlex:

1. Allows an easy and quick length adjustment. No extra tools or rental bindings needed.
2. Preserves the natural flex of the ski.
3. The ski flex doesn't affect the safety function of bindings.
4. Adds 40 mm to the standheight thus totally preventing all kinds of boot-out.
5. Can be easily moved forwards or backwards thus allowing a personalized mounting position and influencing the ski's character.

allows an easy and quick length adjustment of bindings

the ski flex doesn't affect the safety function of bindings

preserves the natural flex of the ski

its height prevents boot-out

To carve a turn as smooth as possible the ski should flex ideally without any deformation. That's a well-known fact.

The Sporten VarioFlex plate combines two basic principles:

- ▶ the ski-plate contact takes place in two axes so that the ski can freely flex between the two points
- ▶ the plate is fixed at the front and floating at the rear

What makes the VarioFlex plate unique is the combination of these two effective principles resulting in exceptionally undeformed and natural flex even in stiff skis.

Another advantage of the VarioFlex plate is the quick adjustment to any ski boot length and the possibility of moving the bindings back or forth, adapting the ski to the skier's personal preference, to terrain and to the type of turns.

The Sporten VarioFlex plate does not have to flex. The toe and heel of the binding always remain independent of the ski flex, preserving the release setting and forward pressure and thus significantly increasing the skier's safety.

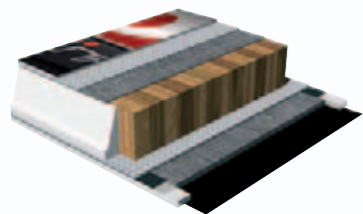

Last but not least, the VarioFlex plate does not require any freeflex function and complex connecting mechanisms, thus permitting the use of lighter, less complicated and less expensive two-part bindings without any lifters.

The height of the VarioFlex plate totally prevents any boot-out making it a perfect choice even for extreme funcarvers seeking breathtaking inclinations.

The Sporten VarioFlex plate offers unprecedented ski flex, adjustability, height and safety in a light and elegant pack.

ICON	TITLE	DESCRIPTION
	Titanal	Titanal® is a high strength, age hardenable aluminum-wrought-alloy that significantly increases the torsional rigidity and edge grip of a ski providing smooth running. It is used in combination with or instead of a certain type of fiberglass.
	Prepreg	A specially produced type of high-resistance fiberglass ensuring maximum power transfer to the edge.
	Woodcore	A typical laminated high-quality woodcore. Lightweight woodcores of cross-country skis with air channels to save weight.
	EasyFlow	Special PU composite makes a perfect stable core providing excellent dampening characteristics.
	SBC base	A high-molecular weight base characterized by excellent wax absorption and perfect glide.
	3D shape	Contributes to the overall torsional rigidity of alpine skis and to better aerodynamics of both alpine and cross-country skis.
	Structured top sheet	The highly aesthetic top sheet increasing the scratch-resistance of skis.
	Set available	Skis supplied also in a set (specification of sets included in the price list).
	Carving plate included	A premounted plate increasing the standheight and preserving the natural flex characteristics of the ski.
	XC plate	A special material integrated directly into a cross-country ski. Optimizing power distribution alongside the ski during the kick.
	Honeycomb	A material minimizing the weight of cross-country racing skis.

SPORTEN

AHV 06 GS

A high performance GS carver for racers and excellent skiers

A classic sandwich construction with two layers of titanal guarantee excellent grip, stability in high speeds, powerful acceleration and a dynamic exit. Wider steel edges for frequent tuning and long life. An excellent long-turn ski.

SPORTEN

AHV 06 SL

A highly versatile slalom racing ski

The most popular Sporten ski of the previous seasons. A classic sandwich construction with two layers of titanal provides excellent grip, quick edge change and a dynamic exit. A progressive tip shape (FLF) supports an easy and quick turn initiation. Wider steel edges for frequent tuning and long life. An excellent funcarver.

SPORTEN

AHV 05 SL

A slalom carver, a softer and more tolerant version of the AHV 06 SL

The same dimensions as AHV 06 SL but softer, lighter, more tolerant and easier to turn. Suitable for a wider range of skiers including expert ladies. Due to its extreme versatility a perfect choice as a radically shaped allround ski.

SKI**Alpine Freestyle****CULT**

A brand-new freestyle ski for both P & P and offpiste

Progressive cross philosophy: a freestyle/freeride twintip ski that won't let you down even on groomers. A sturdy woodcore sandwich construction, ABS sidewalls, thick edges for extreme durability. Developed with our top riders.

SPORTEN**SKI****Alpine Super Carve****S-LINE**

A performance-oriented short carving ski

Almost a legend within the Sporten line, a link between short blades and standard lengths. A unique combination of shorter length and shape provides both easy and aggressive edge grip. Ideal as a practicing tool.

SPORTEN

SPRINT

A time-tested light and fast ski for sporting skiing in tracks

Light due to a woodcore with air channels. Fast thanks to a new preparation of base. The softest of all SPRINT models. The skate version with a low tip is the stiffest one of all SPRINT models. The combi version combines both classic and skate qualities. Suitable for both styles due to its compromising features, especially stiffness.

Nr. NS01 - Sprint Classic
Nr. NS02 - Sprint Combi
