

ELAN RACING SKIS COLLECTION

2013/14

elan

WWW.ELANSKIS.COM

POWER SPINE GENETIC EVOLUTION

AMPHIBIO PROFILE

An uncompromised innovation delivering both camber and rocker profile benefits at the same time. The cambered inside edge supports Power Spine technology and assures edge grip and stability and the rockered outside edge allows faster and more direct turns.

- 1 Power Spine
- 2 RST sidewall
- 3 Dual Ti
- 4 Racing base
- 5 Response frame woodcore
- 6 Reinforced inside edge
- 7 Carbon

LEFT & RIGHT CONSTRUCTION

Elan Race skis are the first race skis with real left & right construction. Starting from the analysis of force distribution, the outcome has been the combination of Power Spine technology with Amphibio® Profile and asymmetric tip and tail that enable the best transmission of forces from the legs to the snow, assuring unrivalled performances on the most demanding slopes.

RACING BASE
The racing base has exceptional waxing properties and a very long service life.

REINFORCED INSIDE EDGE
The inside edges have been reinforced to support better Power Spine and to allow several edge tunings during the ski life.

Forces are unevenly distributed among inside and outside parts of the skis

LINE FORCE DISTRIBUTION: forces follow specific lines longitudinally and from inside to outside of the skis

SIDE ELEMENTS/BONES: are reinforced elements that go out of the arch construction and follow the ski's sidecut.

CENTRAL ARCH: interior construction is stronger and reinforced with a carbon layer along its entire length.

GOAL

TO MAKE THE FASTEST SKIS

PROBLEM

INSIDE ≠ OUTSIDE
Analysis of force distribution during skiing revealed that forces are unevenly distributed among inside and outside parts of the skis.

LINE FORCE DISTRIBUTION
Forces distributed along the ski follow specific lines longitudinally and from inside to outside. This requires different construction on the inside and outside part of the ski.

SOLUTION

CENTRAL SPINE ARCH POWER AND EDGE GRIP
The ski's interior construction is stronger and reinforced with a carbon layer along its entire length. This provides perfect edge grip supported also by the camber part of Amphibio® Profile.

SIDE ELEMENTS/BONES TORSIONAL STABILITY
Bones are reinforced elements that go out of the arch construction and follow the ski's sidecut. They assure torsional stability also on the outside of the ski. Together with the rocker part of Amphibio® Profile they bring very direct and precise turns.
