RACE DEPARTMENT

VICTORIES AT THE MOST PRESTIGIOUS SKIING COMPETITIONS HAVE ALWAYS BEEN AN INTEGRAL PART OF ELAN'S STORY. RACE SKIS ARE THE BREAD AND BUTTER OF ELAN'S RACE DEPARTMENT, WHICH COMPRISES SOME OF THE TOP EXPERTS IN THE FIELD.

Since competitive skiing is quite different from recreational skiing, race skis also differ significantly from the conventional skis sold in shops. Race skis have to conform to the rules of the International Ski Federation (FIS), which determine the length and sidecut as well as the height of the ski including the base plate under the ski boot for each discipline.

Competitors can have their skis customised to suit their specific needs using a variety of constructions. Skis can thus differ in longitudinal and lateral stiffness and stiffness distribution (also known among skiers as bending and torsional stiffness) as well as geometry within the limits set by FIS rules. The appropriate materials are then selected to achieve the desired effect based on the parameters defined. Skis can only perform optimally in combination with a perfectly matching base plate and ski boot.

POWER SPINE – GENETIC EVOLUTION

Power Spine is characterized by a special construction that follows the distribution of force from a skier's legs to the ski. The ski's interior construction, spine arch, is stronger and reinforced with a carbon layer along its entire length. The side elements/bones assure torsional stability also on the outside of the ski. This new technology is featured in the entire race range.

- 1 Power Spine
- 2 RST sidewall
- 3 Dual Ti
- 4 Racing base
- 5 Response frame woodcore
- 6 Reinforced inside edge
- 7 Carbon

AMPHIBIO PROFILE

An uncompromised innovation delivering both camber and rocker profile benefits at the same time. The secret lies in specific left and right ski design, featuring a cambered inside edge assuring edge grip and stability with the rockered outside edge for easier turning.

RACING BASE

Central Spine Arch Power and edge grip

REINFORCED INSIDE EDGE

The inside edges have been reinforced to better support The Power Spine system and to allow several edge tunings during the ski life.

POWER SPINE TECHNOLOGY

- 1 **CENTRAL SPINE ARCH POWER AND EDGE GRIP**
The ski's interior construction is stronger and reinforced with a carbon layer along its entire length. This provides perfect edge grip supported also by the camber sections of the Amphibio® Profile.
- 2 **SIDE ELEMENTS/BONES TORSIONAL STABILITY**
Bones are reinforced elements that go out of the arch construction and follow the ski's sidecut. They assure torsional stability also on the outside of the ski. Together with the rocker section of the Amphibio® Profile they bring very direct and precise turns.

LEFT&RIGHT CONSTRUCTION

Elan Race skis are the first race skis with real left & right construction. Starting from the analysis of force distribution, the outcome has been the combination of Power Spine technology with the Amphibio® Profile and an asymmetric tip and tail that enable the best transmission of force from a skier's legs to the snow, assuring unrivalled performances on the most demanding slopes.
