

TECHNOLOGY KEY

SUPER FIT ENGINEERING

Super Fit™ Engineering is the foundation of our product design process. Every new Giro product is designed with reference to our database of anatomic measurements and rider input. We then test the design repeatedly in the lab and in the hands of riders so we can gather feedback and make refinements to create a final product that fits and performs at the highest level.

IN FORM FIT SYSTEM

The In Form™ system makes it easy to dial in a custom fit in seconds - even with gloves on. An ergo-friendly dial at the base of the helmet provides up to 6cm of adjustment and enhanced stability while the vertical tuning feature accommodates different goggles and head shapes for a custom fit, free of gaper gap.

FIT KIT PAD SYSTEM

Our Fit Kit™ pad system allows you to dial in your fit using different thickness comfort pads on the interior of the helmet. Just pull the hook and loop backed pads out and swap them for the thickness you need.

IN-MOLD CONSTRUCTION

In-mold construction fuses a tough polycarbonate outer shell with the helmet's impact-absorbing foam liner. The fusion process allows us to sculpt better ventilation systems, so In-mold helmets can be lighter and cooler than traditional helmets.

SUPER COOL VENTS

Super Cool™ vents pull cool, fresh air into the helmet while pushing heat and stale air out. By maximizing efficiency and optimizing vent shapes, the collective cooling power of Super Cool vents helps to regulate your core temperature and keep you feeling fresh all day.

THERMOSTAT CONTROL

Thermostat™ ventilation control allows you to custom tune airflow instantly with a simple, low profile control button on the outside of the helmet. No other system is faster or easier to adjust, and nothing is more effective at keeping you comfortable.

WIND TUNNEL VENTILATION

Wind Tunnel™ ventilation combines active vents with exhaust channels in the helmet's liner that pull cool, fresh air over and around your head while forcing stale, warm air out. It's the ultimate cooling system, with performance that you can feel every time you ride.

INTERIOR SUBLINER

The interior subliner allows you to customize your pads or pull them out completely for the ultimate in rider tuned fit. A soft Velcro free fabric is laminated to the EPS foam on the inside of the helmet to make the fit more comfortable if you want to remove the padding to accommodate a beanie or goggle strap.

STACK VENT

Our Stack Vent™ was developed based on research showing the majority of the warm air that can cause fogging exhausts from the center top vent of the goggle. Aligning the Stack Vent in the helmet with the center vent of your goggles helps to keep them clear and fog free while maintaining total helmet and goggle integration.

INTERIOR GOGGLE CHANNEL

A removable pad at the base of the helmet conceals a deep channel that allows more room for your goggle strap if you want to run it inside your helmet. This translates to maximum comfort and insures your helmet maintains a low profile.

WOMEN'S

Although there is no difference between male and female head shapes other than a smaller average size, we offer women's specific models to keep up with the fashion forward kit found on the mountain. Finishing details and a sophisticated color palette set these models apart.

HARD SHELL

Hard shell construction produces great helmets at a great price. A durable outer shell is molded and then attached to the EPS foam liner.

INTAKE PORT VENTILATION

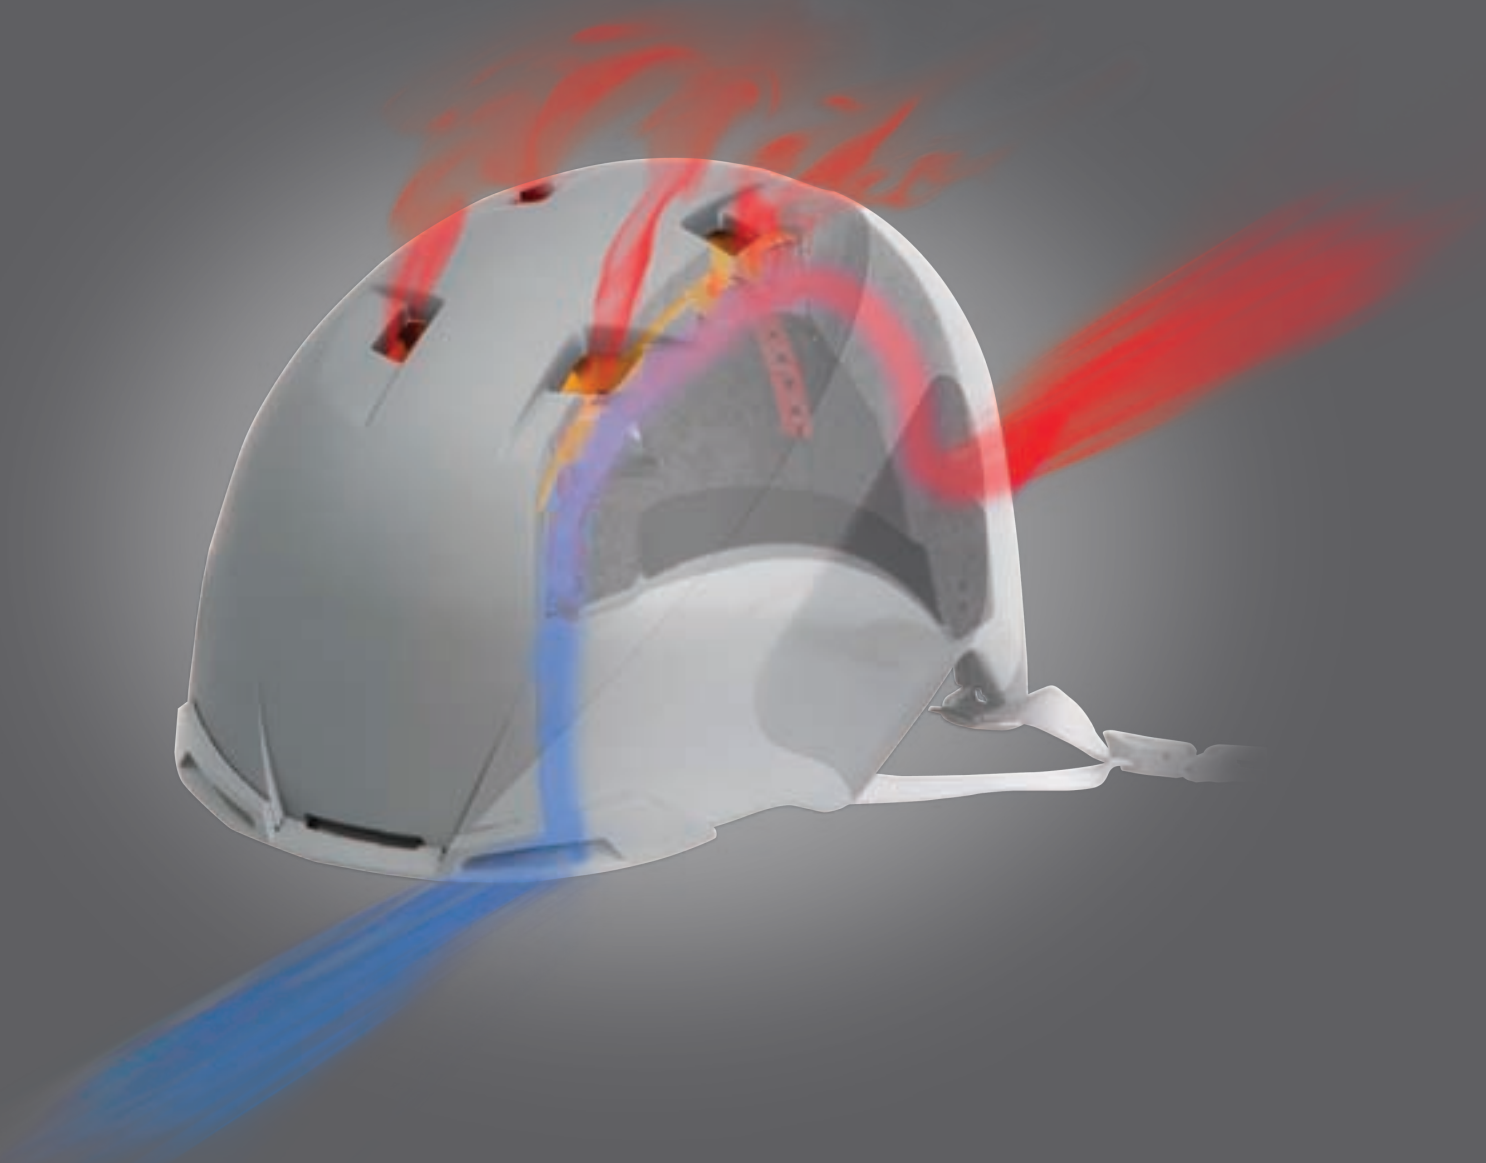

Two vents at the brow of the helmet direct airflow to massive channels cut into the interior of the helmet foam. These channels then link to vents in the top and rear of the helmet. The result is the best ventilation system ever designed for a snow helmet.

X-STATIC

X-static® is a fiber made with a layer of pure silver, which is permanently bonded to the surface of a textile fiber. It is an antimicrobial fiber that is 100% natural that helps to reduce odor and regulate heat.

INTAKE PORT VENTILATION

The unique TPU brim on the Chapter houses two Intake Port™ vents. Rather than blast cold air directly to the forehead, these vents direct air to two over-sized internal channels that distribute cooling power evenly throughout the helmet. Vents at the top and rear of the helmet create low pressure areas that pull fresh air through the system to keep the cooling cycle going.

THERMOSTAT CONTROL

Giro pioneered adjustable helmet ventilation with the innovative Thermostat™ designs now available on our Omen, Seam, Prima, and G10 helmets. Our newest Thermostat system, featured in our new Chapter helmet, utilizes an interior airflow matrix of 16 vents and channels that direct airflow into 4 external vents that can be opened and closed with a single control tab. The result is a low profile helmet shape, with minimal external vents, that offers up the most effective ventilation control available.

Chapter™

Low profile and set up with our new Intake Port vent system; the Chapter is the new archetype for back country / all mountain riding. The deepest channels we have ever cut into a snow helmet pump air over your head to keep you cool and comfortable.

KEY FEATURES:

JEFF KLEINSMITH

For the last 16 years, Jeff Kleinsmith has produced hundreds of posters and album covers as art director at Seattle based Sub Pop Records. In early 2008 Jeff began collaborating with Giro on product graphics and this seasons his work can be seen on numerous helmets and goggles. His work has appeared in design books and magazines too numerous to list and in various gallery shows. You can view Jeff's work online at patentpendingindustries.com

Audio Accessories

POWERED BY
SkullCandy™ 

TuneUps Audio Drops powered by SkullCandy

Our TuneUps Audio Drop technology is applied to every component of our audio program. So now every TuneUps after market kit features 40mm speakers that produce crystal clear treble and deep thumping bass. In addition to a step up in audio output, the system is easier than ever to use. Super thin speakers drop into our newly designed Giro earpads* so you'll never lose the integrated design of your earpads and your helmet.

*Some Giro kids and alpine helmets are not audio compatible.

A. TuneUps Wireless with Bluetooth Technology powered by SkullCandy

Intuitive, easy to reach controls are located on the speaker pods and are simple to use, even with gloved hands. Control your music, answer your phone, even turn up the volume without fumbling around for your phone or music player.

*Bluetooth adapter for MP3 player not included.

B. TuneUps with Bluetooth LINK™ powered by SkullCandy

TuneUps™ with Bluetooth LINK™ technology from SkullCandy™ allows you to hard-line into your music player while connecting to your Bluetooth enabled phone wirelessly. A simple touch answers incoming calls while one more disconnects you and gets your music back online.

C. TuneUps powered by SkullCandy

Our basic TuneUps™ audio system offers great stereo sound with an in-line mute button and a volume dial for quick, simple sound control when you need it. The system installs in a snap without tools.

D. SkullCandy Bluetooth adapters

The Approach and The Summit adapters from SkullCandy get your music flowing from your MP3 player to our TuneUps Wireless system.

Omen™

The Omen is the most technically advanced snow helmet ever made. Innovation from experience has produced a 14 vent system that gives you complete control for all conditions. Couple this with our In Form fit system and the backcountry has never been so comfortable.

KEY FEATURES:

STACK VENT

Our Stack Vent™ was developed based on research showing the majority of the warm air that can cause fogging exhausts from the center top vent of the goggle. Aligning the Stack Vent in the helmet with the center vent of your goggles helps to keep them clear and fog free while maintaining total helmet and goggle integration.

ELEANOR GROSCH

From a young age, Eleanor drew animals. She drew them at home, she drew them in school, she drew them on vacation, in the car, when she was sick, whenever she could. She rarely drew people; there was just something special about animals that held her interest and continues to do so.

See more of Eleanor's work at pushmepullyoudesign.com.

NIKKI McCLURE

Using only an X-Acto knife, a single sheet of paper, and the inspiration that surrounds her at her Olympia, Washington, home, Nikki McClure lovingly creates her intricate and beautiful paper cuts. Her work constructs a bold graphic language that translates the complex poetry of family, nature, and activism into powerful images. Sometimes she collaborates with her husband, Jay T. Scott, making lamps, and with her son making gardens and large holes in dirt. www.nikkimcclure.com.
