THE POWER OF YOU

BIP. BIP. BIP!

At HEAD, we like to stick to what we are good at doing, and one of those things is winning. This past winter, our World Cup Rebels won more crystal and metal in the World Cup and Olympics, than racers from any other brand. If winning equals strength, then Lindsey, Bode, Maria, Didier, and our stable of rebel racers make HEAD strong.

This year, we are thrilled to welcome several exceptional new members to the HEAD World Cup Rebels team, including the amazing Aksel Lund Svindal and Ted "Shred" Ligety. These supreme skiers destroy the competition while having electric personalities. These rebels were born to win.

FASTEN SEATBELTS!

BOOT TECHNOLOGY:

i-Type Technology

THE FIRST REAL ALL DAY BOOT

Focused on all day comfort on the way to the mountain, on the slope and during après-ski, these boots are a big step for skiers all over the world to feel more secure and comfortable wearing and walking in skiboats.

FEATURES

FWS - FLEX WALKING SOLE

The first ski boot with a flexible sole when stepping out of the binding. Patented.

ASW - AUTO SKI WALK

Shaft automatically switches between skiing and walking position when stepping in or out of the binding. Patented.

WIDE BACK DESIGN

Releasing the cuff buckle of the i-Type, the cuff opens backwards generously, allowing for perfect in-store and early morning try-on.

READY TO CLOSE SHELL

Cuff and innerboot tongue are designed to perfectly wrap your foot and automatically close once you step into the boot.

DOUBLE MEMORY BUCKLE

Once you've determined your perfect position, this memory buckle remembers it. Only one move required to close or release the lower shell.

VIBRAM SOLE

i-Type 12 boots feature ISO 5355 Vibram soles on heel and toes. The SoftWalk shock absorption cushioning on the heel makes walking even smoother.

HEAD Skis 2011/2012 are loaded. Loaded with medals, loaded with technology and loaded with attitude. Welcome to the most explosive season in our history.

ELECTROSHOCK THERAPY.

HEAD KERS Technology is the secret sauce that kicks these rapid racers into warpspeed.

The KERS chip releases a jolt of piezoelectric acceleration to make skiers faster out of every turn. We like to think of it as electroshock therapy for speedoholics.

Kinetic Energy Recovery System
KERS

KERS

KERS stands for Kinetic Energy Recovery System: piezoelectric fibers transform kinetic energy into electrical energy which is stored in a chip and released at the end of every turn.

VROOOOM. THE GOOD TWIN.

For many years, the Porsche 911 has been a car that every driver aspires to take for a lap. Since not every driver can handle - or afford - a 911, Porsche introduced their Cayman model to reach more drivers. If HEAD Supershape skis are our 911, then the new X-Shape series is our Cayman. HEAD is proud to offer these new skis which deliver a taste of the legendary Supershape performance.

HIGH-SPEED COMPUTING.

HEAD Intelligence Chip Technology is easy to sum up: it takes the vibrations from your ski, and turns each one onto its head to cancel out new vibrations as they emerge. The faster you ride, the more stable the ski becomes. Now, who's better than you? We can all use a little more Intelligence, and this kind will work on hardpack and beyond.

INTELLIGENCE

Head over to > work.head.com and discover the brains behind Intelligence.

STAY EDGY.

All Mountain Performance doesn't mean all-mountain compromise. It means go anywhere, and ski anything. So, stay edgy: the TT in the names of the HEAD Icon series stands for Torque Turning Technology - and that makes fast, agile, and easy to handle skis with Iconic performance.

TORQUE
TURNING TECHNOLOGY

On > work.head.com we explain in detail how we combine the silkiest ride with the most powerful edge.

VERSATILITY AT ITS PEAK

"Fantastic!" is what we've been hearing about our greatly improved 2011 Peak collection. We kept the name but threw out the moulds (literally, check out the new Peak 90 and 84) to make our best all mountain collection to date. The skis feature graphics designed by renowned Montana graphic artist Pete Thomas, who's legendary style shines through. Not only do these skis look great, but they ski even better. The entire collection features Flow Ride, which gives skiers "rocker when you want it, and stability when you need it." Simply put, these skis are fun, fun, fun for everyone.

Peak features Flow Ride: Rocker when you want it, and stability when you need it. **Details > page 53**

THE ULTIMATE AIR GUITAR.

Big Mountain Skis. Ski big mountains. HEAD skis motor. Motörhead SKIS!

We are proudly dedicating this season's Rocker edition to the band that put the fast rock n' roll on the map: Motörhead. These skis were made to rock backstage... err, the backcountry and with the amount of people out there built for speed, you better make sure to stock up on these axes.

FLR TECHNOLOGY

These skis feature Flow Rise and Flow Rocker, an off-piste dream combo we would never want to see go solo.

Details > page 53

BE VOLATILE.

Speed isn't just for racers. Freeskiers are speedoholics too (and we're not even talking about Jon Olsson who's started showing the Swedish alpine GS team how it's done). The fact is, you can't win a big air contest without a fast inrun, and in the pipe you need lightening-fast skis to keep your airs big and tight. That's where HEAD park and pipe skis come in - Jon designs them to go big and fast, just how you need them.

In life, it's important to have both feet on the ground. Skiing, you want to keep them planted on the ski. The next generation of HEAD bindings does an even better job at providing stability, security and precision - on the groomed and off the scales.

FLEX ATTACK.

Svindal, Miller, and Vonn are equipped with HEAD, the fastest skis on earth, so we had to make sure their bindings would match the ride. At 100+ kph, there is no time to contemplate your equipment. That's why only the best will work. That's why we re-invented the kinematics of our toes and introduce the improved LX toes this season. Details > page 54

NOTES:

A BINDING RELATIONSHIP.

Everyone wants to be safe. Some want to be both safe and good-looking. The new line of MYA bindings are both, and feature the proven Anti Blocking System or Anti Friction Slider to provide the performance and looks every woman wants. These hot products match our MYA skis to complete the total package.

GO FAST. STAY SAFE.

Kids are always moving. They can't stand still. This natural impatience is in their system. Kids' bindings should match their needs, and we've made the perfect bindings for juniors (and their parents) who are always on the move.

We like to think boots should be adapting to your foot, not the other way round. This insight drives all of our developments, from comfort to pure performance. Step into the next generation's footsteps.

BUCKLE UP HARD.

Making boots for the fastest skiers in the world is a challenge for most companies. At HEAD, we call that a typical Tuesday. For pro level riders who want to get into our World Cup Rebels' footsteps, we've given the world's fastest boots a dazzling new look and a new innerboot construction for improved comfort and performance.

NOTES:

THE FIRST SKI BOOT WITH TWO LASTS.

This season, HEAD introduces another true revolution in ski boots. Or, should we say, a revelation? In one short second, skiers can change the boot last from 104 mm to 102 mm or vice versa. Adaptive Fit is just that, a fit that adapts to skiers' different needs. For your shop, you get two-models-in-one, allowing you to simplify your buy.

i-TYPE TECHNOLOGY
 Fitting three boots into one is a kind of magic, but we'll explain in full all the tricks up our sleeves. **Details > page 59**

SHE SAID.

HEAD's women's-specific ski boots are just that, 100% for women. Our Dream series are still the only boots that feature a shell developed especially for women's feet. We also take the award-winning, best-selling Vector, AdaptEdge, and i-Type shells and load them with women's specific features to complete our line up. Our women's collection is the perfect blend of beauty and performance.

BRAVE AT HEART.

Kids like to have fun. But kids like to be good at what they do, too. Skiing is no exception, so we've made our boots a little cooler with features like Spine-Tech buckles or sticker kits - whether you have a future star, or a future fireside sleeper, we have the boot to keep your kid happy and cosy.

It's the small things in life that make a big difference. This is why we pack as much thought into our accessories as we put into our hardware.

STICK AROUND.

When it comes to building poles, you've gotta be tough, but you've also gotta be light. At HEAD, we're tough and light, like a bantamweight fighter. With our all-new fat&PIPE pole, featuring cut-to-fit technology, you can easily cut through the crud and make this pole your own custom length.

NOTES:

PACK ATTACK.

To take the world by storm, one has to travel it. Make sure you do in style and ease with our rebels-approved line of travel bags. These are made for you, because we know energy should be spent on the mountain, not on the way there.

REBELS' LINE

Rebels' Travelbag

art. N°	383501
dimensions	84 x 34 x 40 cm
volume	72 l
description	Big wheelee bag for ski pros and world travellers. Stowable telescope handle for easy pulling. Padded heavy-duty casing. High quality wheels.

Rebels' Racing Backpack

art. N°	383631
dimensions	40 x 50 x 34 cm
volume	41 l
description	Big backpack for racers, coaches and tech-reps. Equipped with padded dorsal straps and backing, organizer and various utility compartments.

Rebels' Backpack

art. N°	383531
dimensions	32 x 48 x 18 cm
volume	19 l
description	Functional Pro freeride daypack with various utility compartments (for goggles, digi cams, etc), stowable helmet net and water resistant protectice shell. 4 diagonal ski or snowboard straps.

Heatable Ski Boot Bag

art. N°	383540
dimensions	45 x 28 x 45 cm
volume	42 l
description	Shapely boot-carry-on-bag with heating elements. Various utility compartments and adjustable helmet holder. Power: 110V or 220V DC / Automotive: 12V AC. Temperature: Three temperature settings: Hot (70°C/150°F), Dry (60°C/130°F), Warm (50°C/122°F)

Rebels' Double Skibag

art. N°	383521
dimensions	195(223) x 40 x 16 cm
volume	116 l
description	Protective bag for 2 pairs of racing skis. Business card window and padded main compartment. Extendable to a length of 223 cm.

PERFORMANCE LINE

Ski Travelbag

art. N°	383701
dimensions	80 x 36 x 37 cm
volume	79 l
description	Big wheelee bag with a large zippered main compartment and other compartments. Stowable pull handle. Business card window and high quality wheels.

Ski Daypack

art. N°	383741
dimensions	31 x 23 x 23 cm
volume	17 l
description	Daypack with zippered main and external compartment. Ergonomic mesh back padding.

Boot Bag

art. N°	383751
dimensions	40 x 40 x 27 cm
volume	31 l
description	Shapely boot-carry-on-bag with comfortable handles and shoulder strap. Zippered main and external compartment.

Single Ski Bag 170

art. N°	383711
dimensions	178 x 22 x 12 cm
volume	41 l
description	Protective Skibag for one pair of skis. Equipped with two buckled, easy-to-adjust compression straps and a comfortable carrying strap.

Single Ski Bag 190

art. N°	383721
dimensions	196 x 22 x 12 cm
volume	53 l
description	Protective Skibag for one pair of skis. Equipped with two buckled, easy-to-adjust compression straps and a comfortable carrying strap.

Double Ski Bag

art. N°	383731
dimensions	177(195) x 30 x 12 cm
volume	67 l
description	Protective bag for two pairs of skis. Equipped with two buckled, easy-to-adjust compression straps and a comfortable carrying strap. Extendable to a length of 195 cm.

Boot Backpack

art. N°	383761
dimensions	36 x 40 x 27 cm
volume	26 l
description	Ski boot backpack with padded dorsal straps. Roomy zippered compartment and external zippered pouch. Backing ergonomically padded.

Wallet

art. N°	383771
Dimension	8 x 12 cm
volume	-
description	Slick wallet with change, credit card and snowcat license compartment.

WOMEN'S LINE

Women's Travelbag

art. N°	383801
dimensions	73 x 36 x 37 cm
volume	67 l
description	Women-specific wheelee bag with telescope handle for easy pulling. Large zippered main compartment and various inner and outer compartments. High quality wheels.

Women's Boot Bag

art. N°	383831
dimensions	40 x 38 x 27 cm
volume	30 l
description	Boot bag for one pair of boots. Ergonomic shoulder strap. Zippered main and external compartment.

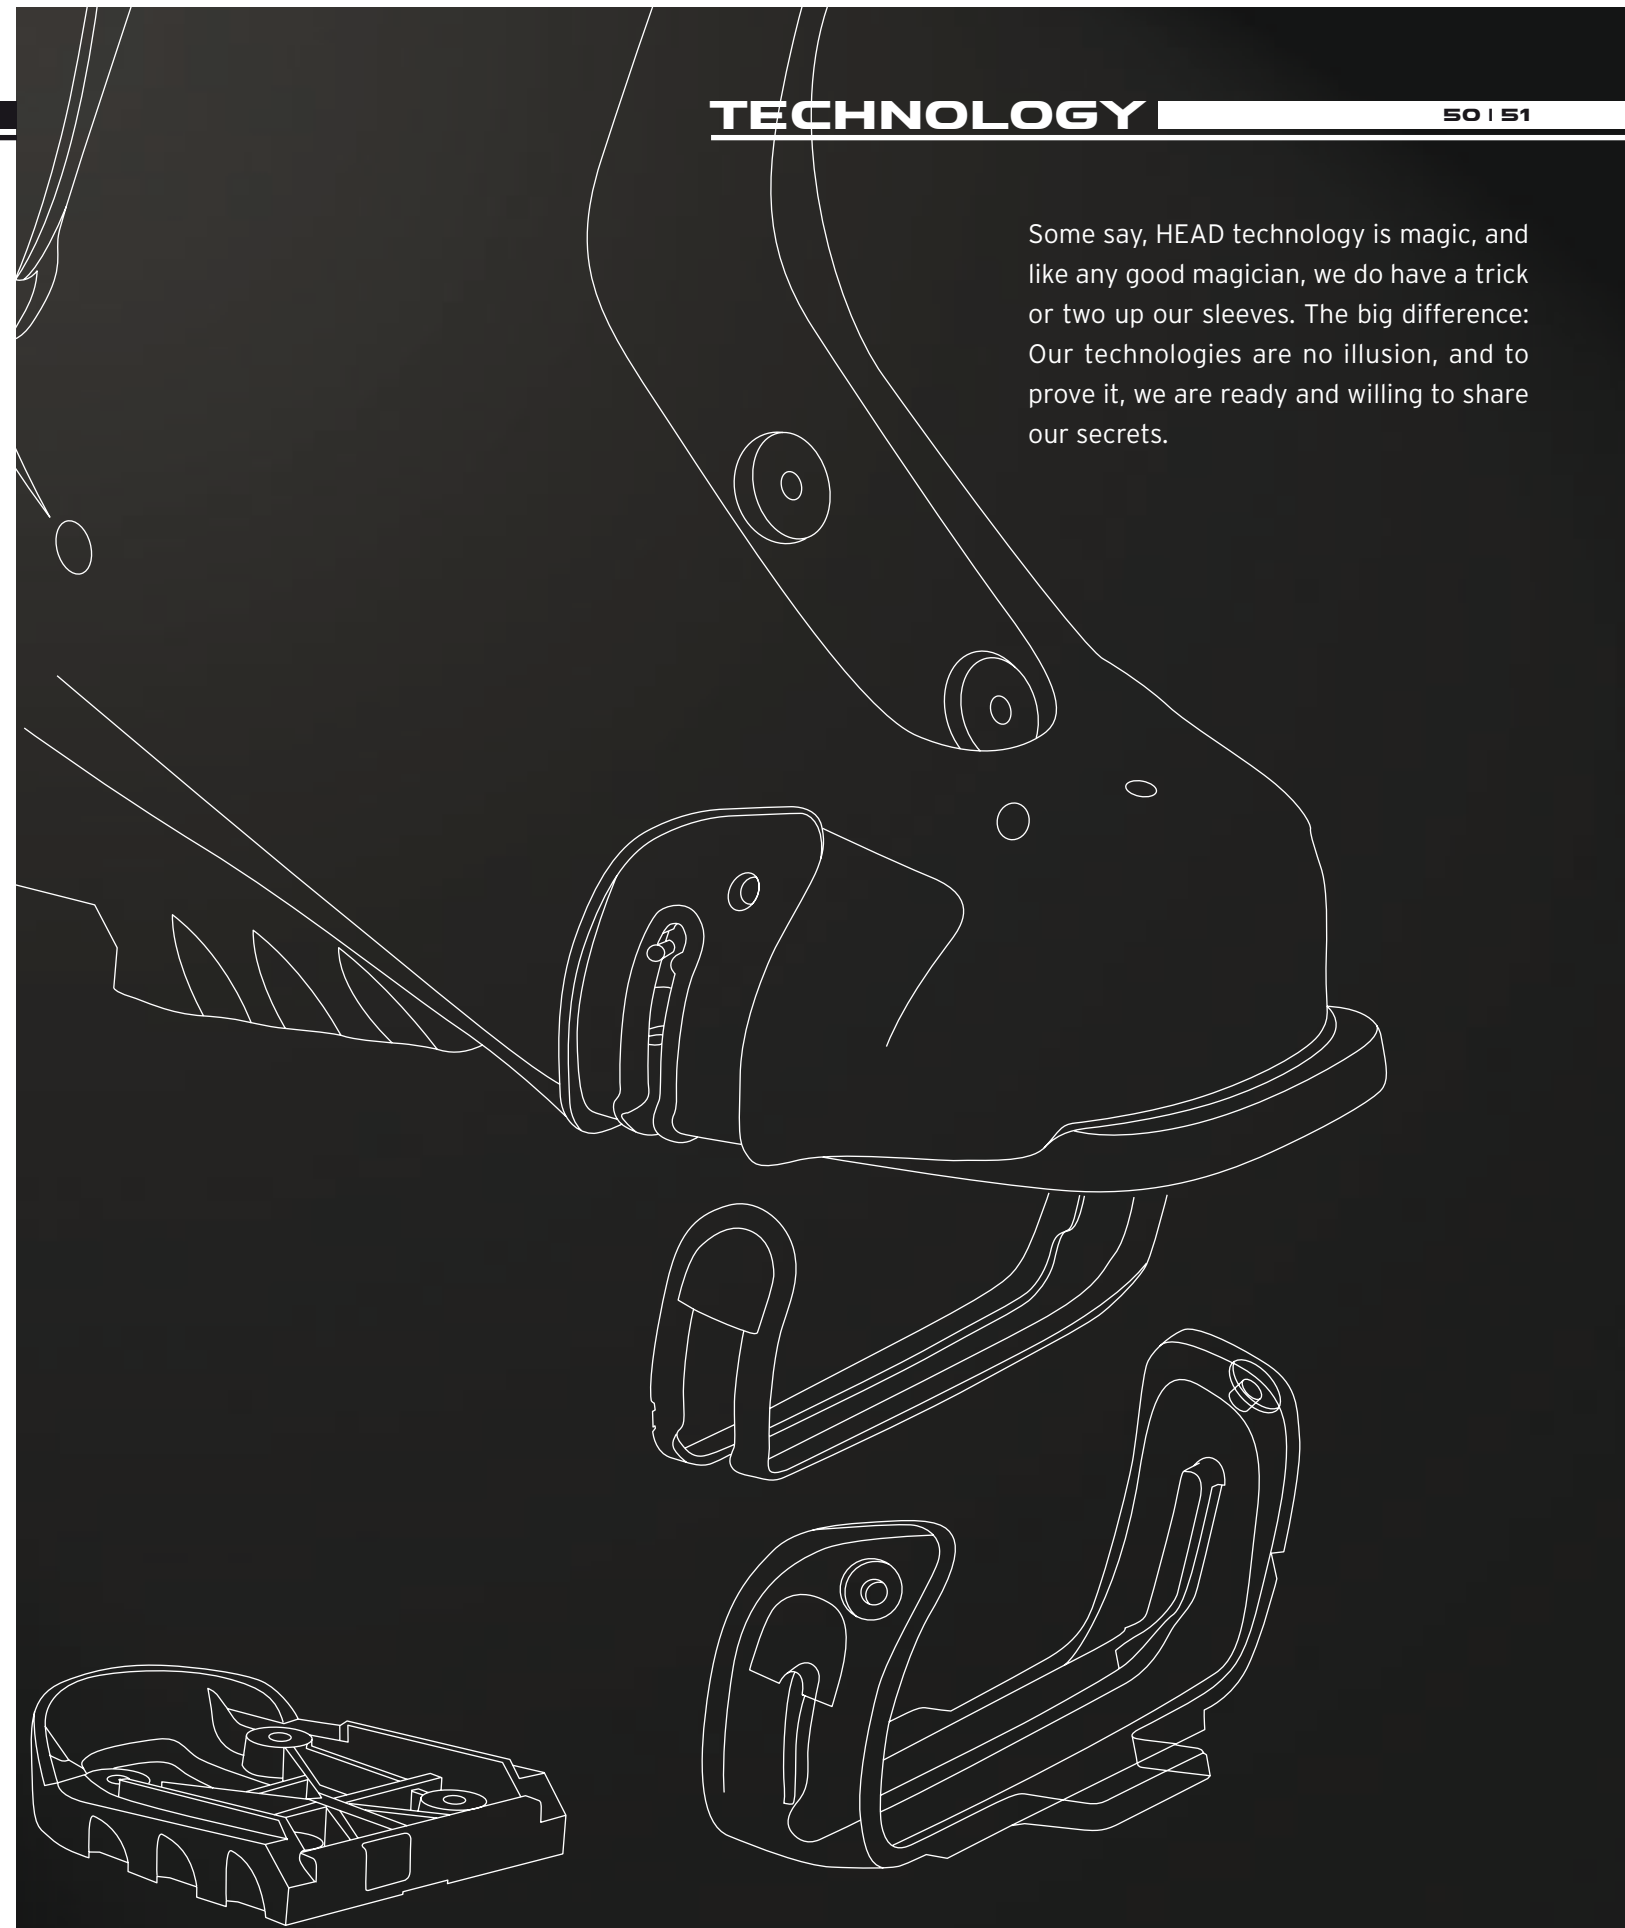

Women's Single Ski Bag

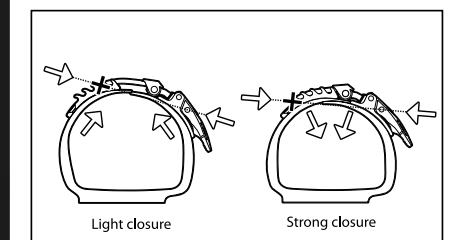

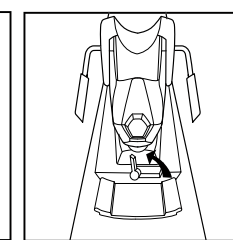

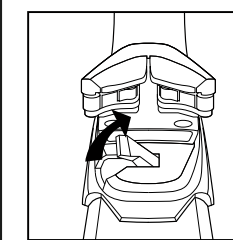

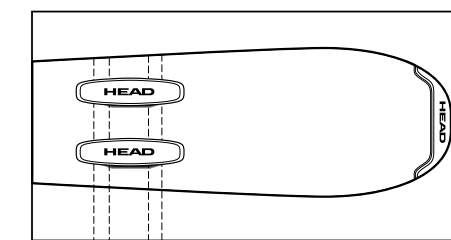

art. N°	383811
dimensions	187 x 24 x 12 cm
volume	60 l
description	A women-specific skibag for one pair of skis. Comfortable carrying straps and solid compression straps.

Women's Handbag

art. N°	383821
dimensions	36 x 28 x 15 cm
volume	8 l
description	Small handbag with adjustable shoulder straps. Zippered main compartment and 2 small outside compartments with an organizer.

Some say, HEAD technology is magic, and like any good magician, we do have a trick or two up our sleeves. The big difference: Our technologies are no illusion, and to prove it, we are ready and willing to share our secrets.

SKI TECHNOLOGY:

KERS Technology

THE EXTRA BOOST

KERS Technology works like a turbo charger that provides additional power and acceleration by stiffening the tail of the ski in outturns. The effect: a boost, catapulting the rider into the next turn. Just like when Formula 1 pilots push a button for that extra notch of speed. HEAD KERS Technology is an electronic, fully automatic and integrated system.

TECHNICAL BACKGROUND

HEAD KERS Technology is an evolution of the idea behind HEAD's Intelligence Technology. But unlike Intelligence, KERS does not influence the torsional

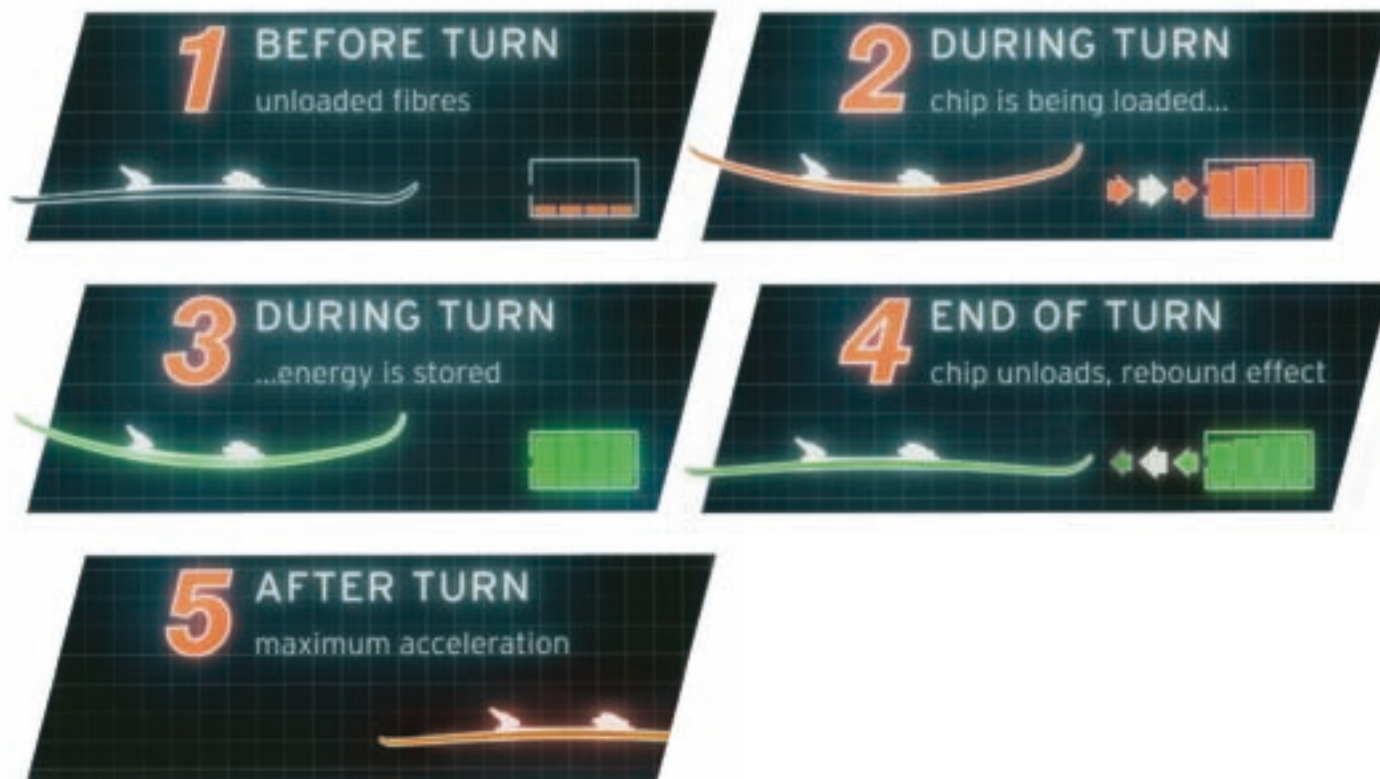

stiffness of the ski, KERS empowers the skis' longitudinal flex. Also KERS Technology is based on a completely new chip capable of accumulating power and keeping it in store for the right moment.

Piezoelectric fibers transform kinetic energy into electrical energy which is stored in the embedded chip in the ski. Electrical energy is immediately released to areas of the ski, where additional energy is requested by the sensor. Timing and release are automatically controlled and coordinated. Depending on the flex pattern of different ski models, sensors are programmed beforehand: the more aggressive the ski has to be, the stiffer the tail will become.

HOW IT WORKS

Skis experience maximum flex at the end of a turn. At this moment an active microchip releases energy into the fibers of the tail. The tail of the ski then

stiffens up, immediately increasing rebound for maximum acceleration at the end of the outturn.

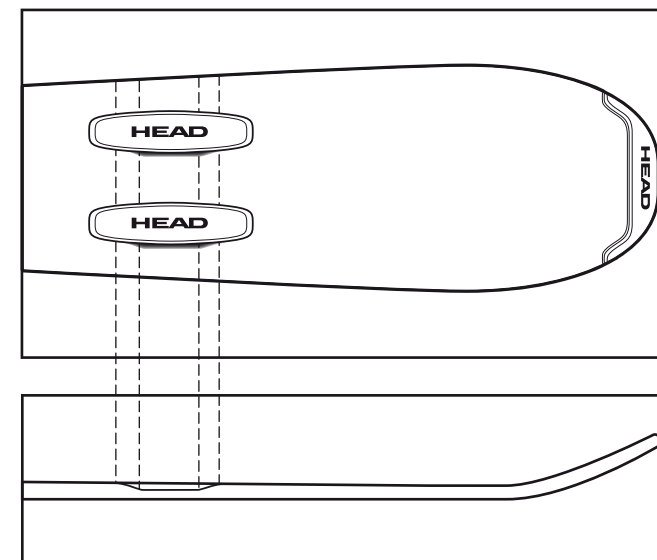

SKI TECHNOLOGY:

FLR Technology

Every skier is on a quest for fun. For some, it's chest-deep powder, while others want to rip down groomers. No matter where you ski, HEAD's FLR Technology helps you find the action.

The FLR family consists of three profiles: Flow Ride, Flow Rise, and Flow Rocker.

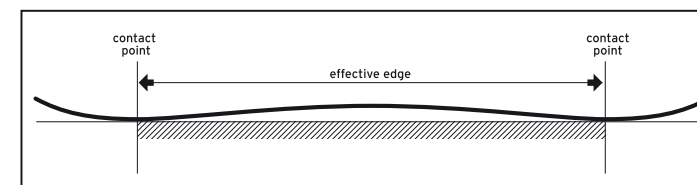

HOW IT WORKS

FLOW RIDE

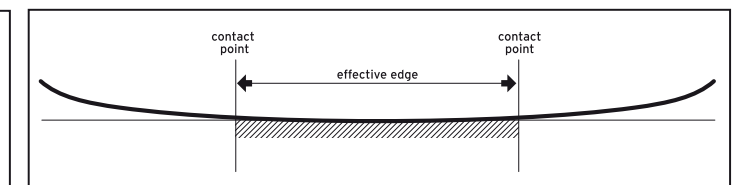

Flow Ride gives skiers "rocker when you want it, and stability when you need it." Simply put, these skis are fun, fun, fun for everyone.

Flow Ride blends the superior edge hold of traditional "bowed" camber with the floatation of rocker, putting the skier in complete harmony with the mountain. Flow Ride is the most versatile of the three FLR core profiles, and is equally at home in the Rockies as it is in the Alps.

FLOW RISE

Flow Rise combines early rise rocker with traditional camber. This profile utilizes a longer rise in the tip for increased float in powder with a shorter rise in the tail for surefooted landings. Through the mid-body of the ski, traditional camber is used to maintain edge-hold and rebound for groomed slopes.

FLOW ROCKER

Flow Rocker is full-length rocker that starts at the bindings, and works its way to the ends of the ski (that's right, like a rocking chair...). The effective edge is shorter, but the large surface of this powder ski profile gives the skier the stability they need for the gnarliest of the gnar.

The result is a profile that surfs powder and smears turns with the greatest of ease.

BINDING TECHNOLOGY:

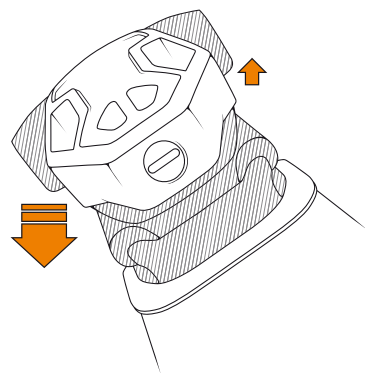

HEAD Kinematics in LX and SX Toes

THE NEXT BIG STEP IN BINDINGS

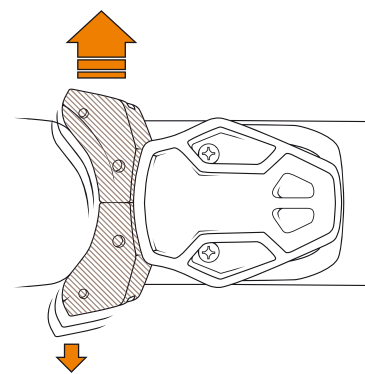

As the worldwide leaders in binding sales and technology, we believe in challenging the status quo. Not just in the safety, convenience, or aesthetics of our products, but also in the performance. To this end, for 2011/2012 we have reinvented our S and L toes, and raised the standard - again.

Introducing the new HEAD SX and LX toes:
They don't just look smart and solid, they also have a completely new kinematic layout to match. These new toes offer:

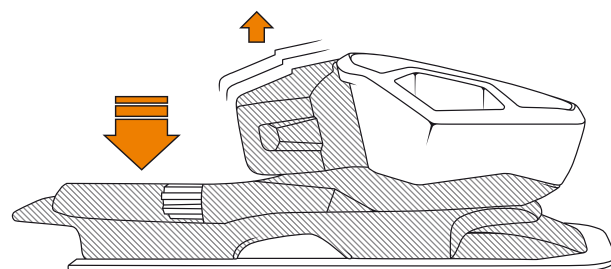

HOW IT WORKS

1 **More Power** directed to the ski for highly precise, less fatiguing turns (tilt stability).

2 **Faster Re-Centering** and increased horizontal stability for more exact ski steering and better performance throughout the day, widest-possible screw placement for precise big mountain ski performance.

3 **More Vertical Tolerance** for accommodating various sole thicknesses (and a little muck, too), as well as precise ski control.

We're not bragging, we're just sayin' that these bindings out-ski our competition and take binding performance to the next level for the next generation of skiers.

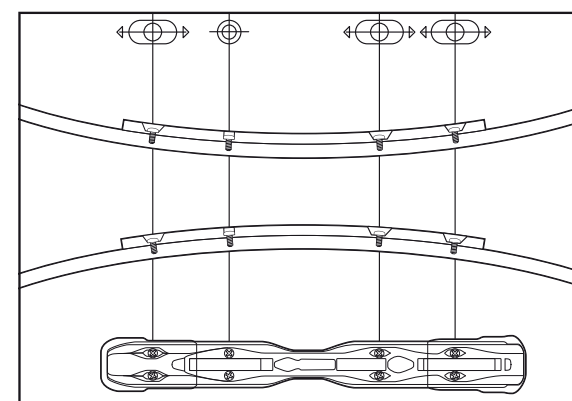

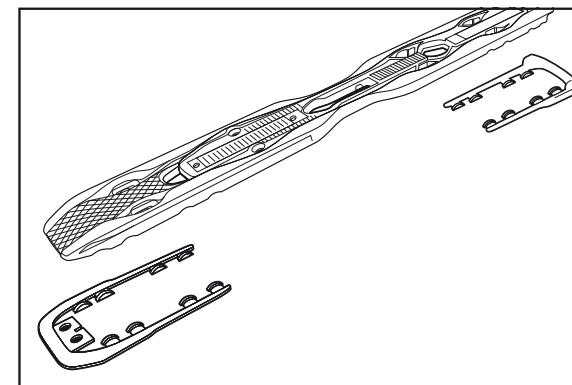

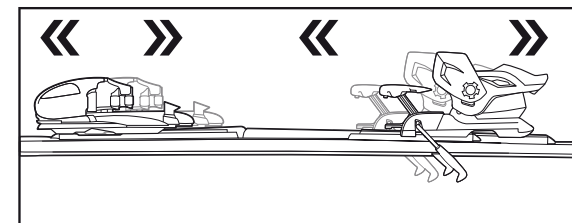

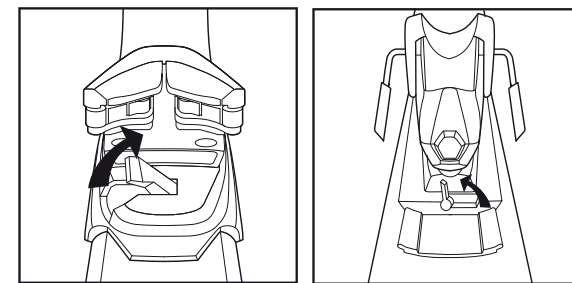

BINDING TECHNOLOGY:

PowerRail Technology

The performance binding that meets the demands of ambitious skiers. Welcome to the fast lane in binding technology evolution: PowerRail - successor of Railflex System II.

- Easy Mounting & Adjusting
- Modular System
- Ideal for Retail, Demo and Rental
- Maximum Flexibility

HOW IT WORKS

FEATURES

NO DRILLING OR SCREWING. JUST SLIDING.

- [1] Open toe lever and adjust.
- [2] Do the same with the heel.
- [3] Close the toe and heel lever. Done.

MODULAR SYSTEM

The PowerRail System was built modularly to match any rider's needs. Covering all segments with choices of Standard or Pro bases and dampeners in different widths for perfect ski fitting. PowerRail suits sole lengths between 260 and 380 mm.

NATURAL FLEX

To ensure unhindered natural flex the PowerRail base is mounted with one pair of fixed screws and three pairs of free gliding screws. This way the base smoothly adapts to the flex of the ski.

DOUBLE THE FLEX

The PowerRail Pro base is equipped with an additional freeflex band, linking the toothed areas at the toe and heel side of the base, allowing toe and heel pieces to glide unhindered. The double freeflex function ensures even more freedom, safety, and performance.

LONG-TERM PERFORMANCE

Each toe and heel guide can be exchanged or fitted separately, ensuring full functionality even after massive rental use.

BETTER POWER TRANSMISSION

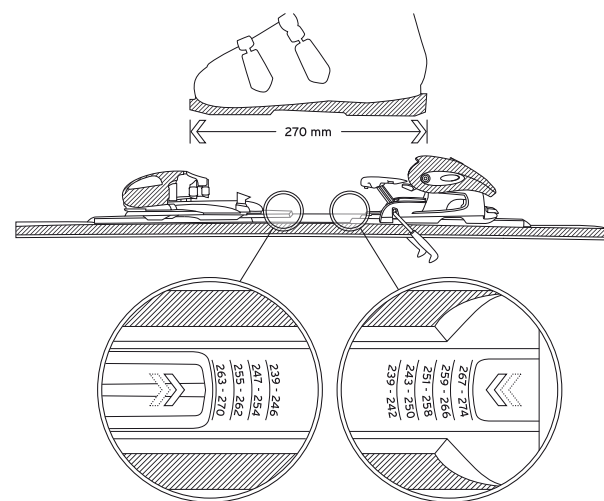

PowerRail bases are 7% wider and 25% lower than Railflex II bases, directly improving power transmission from boot to edge.

BINDING TECHNOLOGY:

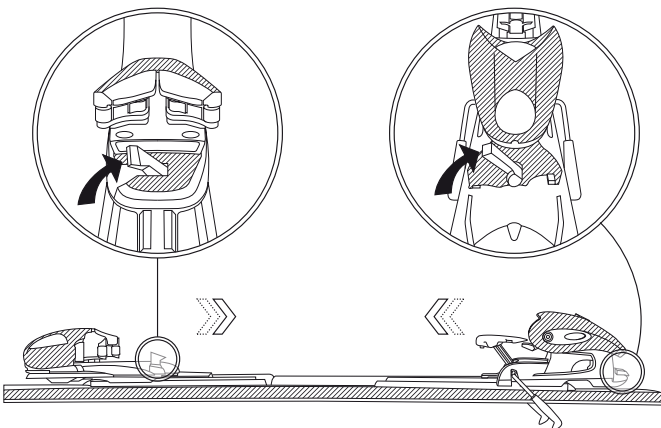

LiteRail Technology

THREE-STEP TOOL-FREE MOUNTING AND ADJUSTMENT

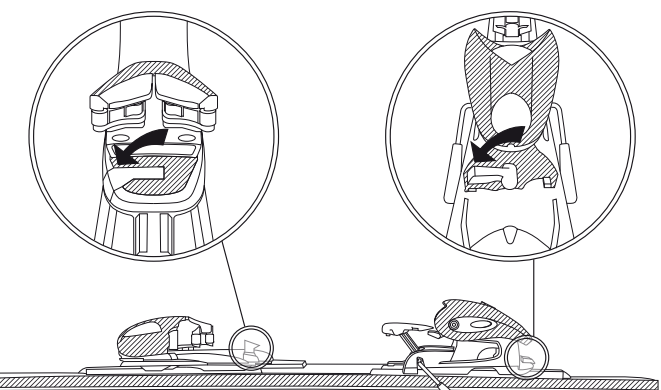

HOW IT WORKS

1 Determine the boot sole length. LiteRail covers boot sole lengths from 199-347 mm.

2 Open toe lever, slide toe on the base and close lever at the appropriate position.

3 Hook brake into the heel, open the heel lever, slide heel on the base and close heel lever at appropriate position. OFF YOU GO.

BOOT TECHNOLOGY:

Raptor Technology

SPINEFLEX BUCKLES

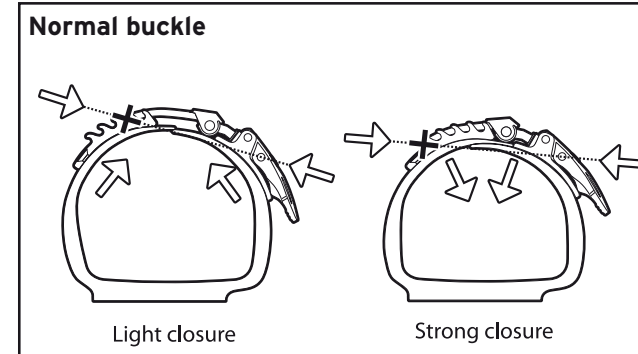

Spineflex is a revolutionary buckle concept with a flexible element and a constant closure point for optimal foot wrapping without pressure points.

DOUBLE POWER BOOSTER VELCRO

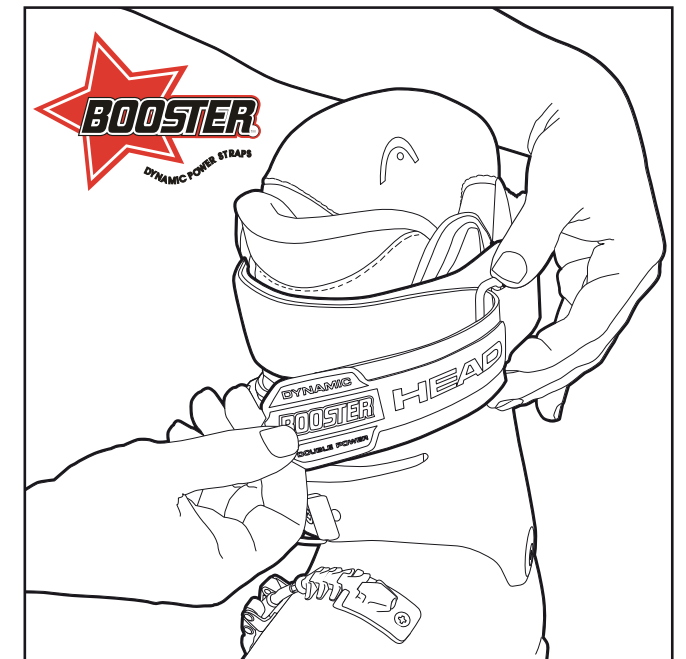

The strap of the Double Power Booster Velcro works as a double pulley for better closure and a tighter wrapping on the cuff. The elastic Booster Strap allows more dynamical response of the boot. The result: more precise transmission and faster ski reaction. (Manufactured under license from Skimetrix Ltd.)

FEATURES

SPINEFLEX BUCKLES

DOUBLE POWER BOOSTER VELCRO

Protected under one or more of the following:
 European patent N. 1087676
 US patent N. 6.026.594
 Canadian patent N. 2.335.698
 Other patents pending.

BOOT TECHNOLOGY:

Adaptive Fit Technology

The **HEAD EDGE** series has a long-standing reputation for being one of the best fitting ski boots ever made. So really, when we developed the new **EDGE**, our intention was to keep all the comfort and come up with a way to increase precision. What our R&D brought back to us is nothing short of a revolution.

The **2011/2012 HEAD EDGE** is the first and only ski boot with two lasts: **HEAD Adaptive Fit Technology** lets you change the width of your boot from 104 mm to 102 mm with one turn of a screw.

This pushes the **EDGE onto a whole new level:**

Not only will it stay your best fitting, best selling boot in the comfort/performance segment, the 102 mm last adjustment will also put it on the feet of more ambitious, precision-oriented customers.

HOW IT WORKS
