WE HAVE THE TECHNOLOGY

LINE SKIS ARE DEVELOPED FOR SKIERS, BY EVEN SMARTER SKIERS USING MATH, TO MAKE SKING MORE FUNNER THAN THE DAY BEFORE, EVERY DAY OF THE YEAR... YOU'RE WELCOME.

GEOMETRY

The rise in the tip starts earlier for effortlessly staying on top of the snow without needing to sit back & easier turn initiation.

The widest point of sidecut starts tapering earlier in the tip to reduce tail drag and hooking in powder.

5 different sizes of sidecut radius shapes are blended into one, for intuitive control and unlimited turn shapes.

SUPER POWERS

3D Die cut metal titanal laminate provides more power & grip where you need it while reducing weight where you don't.

Tip to tail carbon-fiber stringers enhance energy & pop when ollieing over snowboarders.

SUPER POWERS

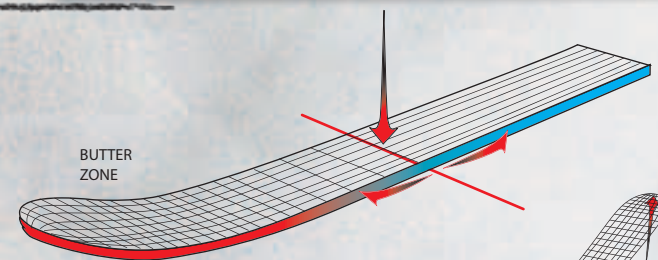

Super thin core & sidewall in the tips are 100grams lighter per pair for reduced swing weight & tip bounce

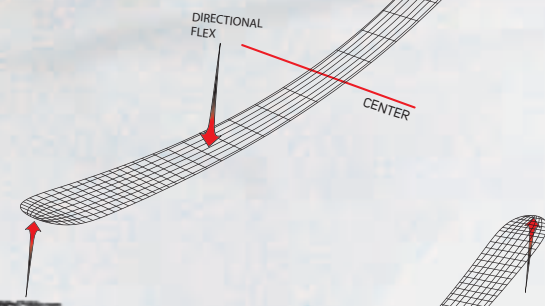

30% thicker base & edge dramatically increases durability & tuning life

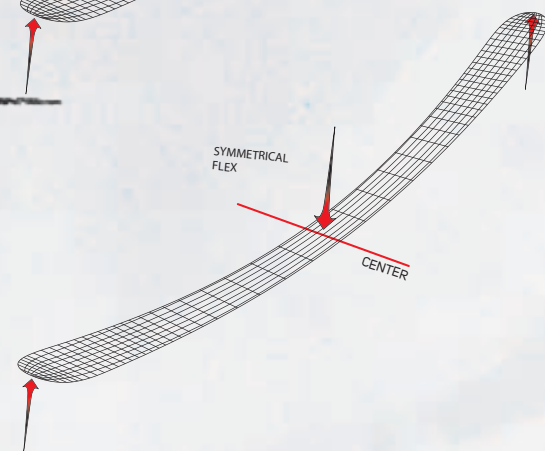

The thinnest point of the ski is in front & behind the binding to create a "hinge" point for smooth, controllable butters & presses without sacrificing all-mountain handling.

The softer tip floats & initiates turns easily while the stiffer tail provides power, stability & high speed control

The same flex pattern in-front and behind your boot conforms to terrain equally riding forward & backwards
