NEW DOBERMANN GP SERIES

THE NEW STANDARD IN HIGH PERFORMANCE SKI BOOTS

At Nordica we create ski boots that both fit and perform at the highest level. This engrained philosophy was front and center in the development and design of the all-new Dobermann GP series. Starting from the ground up, using both the most modern technologies and over 75 years of boot design and development knowledge to build the most anatomical high performance boot on the market, Nordica is proud to introduce the Dobermann GP. Inspired and born from racing, the Dobermann GP features a 98mm mono injected pu performance shell design, an intuitive easy entry in-step, an all new high performance custom cork liner, a Full Motion Pivot alignment system and a revolutionary new Power Driver Strap design. Nordica packed the best of 75 years of boot building experience into the Dobermann GP to create a high performance experience skiers will love

FULL MOTION PIVOT

Customers seeking high performance boots need products they can tweak and adjust to help them achieve their optimal performance. The full motion pivot moves both laterally and horizontally, up to 2mm's, ensuring not only correct lower leg angles but also that the knees are driving and tracking in the right direction as a skier moves through the turn.

MECHANICAL ADVANTAGE + CUSTOM PERFORMANCE

POWER DRIVER 60 mm

Nordica's patented power driver not only creates the perfect marriage between the upper cuff and upper liner, allowing them to uniformly and efficiently work as one, it's pu construction lends itself to being fully customizable.

**INCREASED POWER TRANSMISSION
HIGH PERFORMANCE
+ CONTROL
+ CUSTOMIZATION**

NEW LINER WITH CORK FIT TECHNOLOGY

Building on the proven natural performance characteristics of cork, Nordica continues to push the envelope on striking the perfect balance between comfort, performance and customization with its award winning liners. An all-new custom cork adaptive zone shape, new congruent heel pocket design and all new tongue design All make this a precise, modern and comfortable liner that the market has been asking for.

**CORK CUSTOMIZATION TECHNOLOGY
DIRECT POWER TRANSMISSION + COMFORT**

NEW BUCKLES

Nordica's newly design intuitive buckles either articulate up or down, giving you improved leverage to either open or close your buckles with greater ease.

**NEW SERVOLOCK
COMFORT + FUNCTION**

NEW TOE BOX CONSTRUCTION

**MODERN TOE BOX CONSTRUCTION
+ WEATHER GUARD DESIGN**

NEW ZEPPA (WEDGE)

This boot board has been designed to achieve the optimal natural skiing position with a ramp angle of 3°7' (on size 26.5). Also to enhance performance we have increased the boot board platform by 2 mm to improve control and increase power transmission to the edge of the ski.

NEW GPX SERIES

FIT, PERFORMANCE AND COMFORT WITH GPX

The all-new GPX series from Nordica was designed for skiers by skiers. The new pinnacle in all mountain boots, we implemented both Primaloft® and Cork Fit Technology into the line up. Cork Fit Technology ensures a proper, excellent fit with the GPX line up. As the only ski boots company in the world using Primaloft®, Nordica recognizes the needs of skiers to keep their feet warm and dry during any conditions. Comfort and fit are ensured in all the boots in our GPX Series.

NEW LINER - CORK FIT TECHNOLOGY

Building on the natural performance characteristics of cork, Nordica continues to push the envelope on striking the perfect balance between comfort, performance and customization with its award winning liners. The all hand-stitched construction features a new custom cork adaptive zone shape, a new congruent heel construction and an all-new tongue design. These qualities coupled with an exclusive primaloft lining and foot bed keeps your feet warmer, drier and more comfortable, making your time on the mountain more enjoyable.

**CORK CUSTOMIZATION TECHNOLOGY
DIRECT POWER TRANSMISSION
+ COMFORT + WARMTH**

- PRIMALOFT®

**PRIMALOFT® IS FEATURED EXCLUSIVELY IN
THE 2015-16 BOOT LINEUP.**

Engineered for function and comfort, Primaloft® is implemented into our boots, because, simply, it enhances the liners ability to resist water, recover from compression, and keep skiers feet warm.

NEW PU EXTRA GRIP HEEL & TOE SOLES

Designed to keep your feet both warmer and firmly planted on the ground, the pu extra grip soles offer enhanced traction on wet and slippery surfaces over traditionally constructed soles.

PROTECTION + FUNCTION

GPX W SERIES 105 W - 95 W - 85 W

To ensure we continue to offer the perfect level of performance and comfort in each boot we design, we've engineered the all-new GPX women's series to meet the particular biomechanical shape of a woman's lower leg. Both the liner and cuff have their own specific construction to optimize both on snow comfort and control that heighten the all mountain experience.

NRGY & BELLE SERIES

BETTER THAN THE REST BOOTS FOR ALL MOUNTAIN EXPERIENCES

NRGY

Nordica's NRGy collection is built from the ground up, featuring proven performance and extraordinary fit. Fine-tuned with fantastic features such as Cork Fit Technology, heat mold-ability, dual canting and the world's most comfortable liner and toe box, this entire line delivers superior construction and unmatched response. Great off the shelf, each boot is also customizable and adjustable to meet every skier's feet.

BELLE

The Nordica Belle series was designed for hard-charging women who seek the balance of comfort and performance during the ski day. From the anatomical shell design to the liner and footbed, these boots are loaded with features that deliver what women want in a ski boot, along with unmatched warmth and comfort.

CUSTOM CORK LINER

Building on the proven natural performance characteristics of cork, Nordica introduces the Custom Cork Liner to its award-winning collection of liners as part of the all new NRGy and Belle series of boots.

SUPERIOR PERFORMANCE

The specifically engineered cork and resin compound integrated into the liner wraps the foot in comfort and performance. In addition to being a great natural insulator, due to its superior density, cork provides the greatest transmission of power from boot to ski. Unlike foam and other boot liner materials it doesn't compress when engaging the edge - making turning in NRGy and Belle boots extremely precise and responsive.

MOLDABLE

Cork naturally forms to the contours of your feet over time through body heat, making the liners supremely comfortable and seamlessly integrated with the boot's shell for maximum performance.

FASTEST CUSTOM FIT ON THE MARKET

For the dealer, time is money. With Nordica's Custom Cork Liner, if needed, the boot fitter can in 13 minutes custom fit a Nordica Cork Fit technology series boot. Amazingly, the simple three step process is endlessly repeatable.

80°C / 175°F

PRIMALOFT® LINER.

PRIMALOFT® IS FEATURED EXCLUSIVELY IN THE 2015-16 BOOT LINEUP.

Engineered for function and comfort, Primaloft® is implemented into our boots, because, simply, it enhances the liners ability to resist water, recover from compression, and keep skiers feet warm.

NXT & NXT W SERIES

ALL MOUNTAIN BOOTS FOR THE GO-ANYWHERE, SKI-ANYTHING RIPPERS

The ultimate in comfort, performance and fit, Nordica's NXT collection is the next level in all-mountain boots. Easy to fit, completely adjustable, with the kind of on-snow control sport skiers used to only dream of, each boot is designed to be easy to get on and off. Phenomenal features at an unmatched value are the hallmark of this new generation of boots. Skiers everywhere asked for these boots, Nordica gave the people what they want.

ADJUSTABLE CUFF PROFILE

Our New Adjustable Cuff Profile Mechanism (ACP) allows with only one movement a neutral standing position for every leg size, making skiing all day easier and more comfortable no matter what the width of a skier's leg. Improves width respected previous mechanism.

WEATHER SHIELD

The weather shield is an overlap system integrated into the shell that provides a full waterproof feature to prevent water from leaking into the boot. And as we all know, dry feet are warm and comfortable feet!

PRIMALOFT®

PRIMALOFT® IS FEATURED EXCLUSIVELY IN THE 2015-16 BOOT LINEUP.

Engineered for function and comfort, Primaloft® is implemented into our boots, because, simply, it enhances the liners ability to resist water, recover from compression, and keep skiers feet warm.

45 DEGREE CLOSURE

An aerial, black and white photograph of a ski race course. The snow is heavily tracked with numerous parallel and curved lines. Several black flags on poles are planted along the course, each featuring the 'Gasser Sölden' logo. A skier is visible in the lower-middle section, leaning into a turn. The overall scene is dynamic and captures the intensity of a competitive ski race.

ON PISTE
SKI COLLECTION

DOBERMANN SERIES

DOBERMANN IT'S YOUR TURN

Nordica's Dobermann Collection is specifically designed for any skier who wants to own the frontside of the mountain expecting the very best in ski technology and performance.

CONSTRUCTIONS

ENERGY 2 TITANIUM

World Cup technology full wood core with two sheets of metal over the edges. Top end power transmission, torsional stability and edge grip.

ENERGY TI

A lightweight full sidewall construction utilizing two wood stringers and a sheet of Titalum for max performance, stability, and torsion resistance in a variety of conditions.

ENERGY CA

A lightweight full sidewall construction utilizing two wood stringers and a layer of Carbon providing an extremely agile and comfortable ride throughout the mountain.

CAMROCK PROFILE

RAPID RACE PROFILE

An aggressive tip profile makes our Frontside camRock skis very easy to initiate and rapidly engages the sidecut in the beginning of the turn. A reduced sidecut in the tip of the ski allows the ski to track straighter and cleaner at the bottom of the turn preventing "over steering." The result is a faster ski that travels a shorter, cleaner, and more direct line.

MODERATE RACE PROFILE

A moderate tip profile on our Frontside camRock skis make them extremely easy to initiate by engaging the sidecut in the beginning of the turn. A SL shape in the tip and a GS shape from waist back allows for a wide range of turn shapes from quick tight turns to long smooth arcs extending from one side of the trail to the other. No matter the arc you crave, the Frontside camRock will make it that much more enjoyable!

NEW FIRE ARROW SERIES

HIGH PERFORMANCE MEETS VERSATILITY

Fire Arrow skis make powering through high speed, high octane turns as easy as possible. Designed for skiers who value pinpoint precision, energy and edge hold above all else. The Fire Arrow is the ultimate ski for on piste performance.

CONSTRUCTIONS

ENERGY 2 TITANIUM

World Cup technology full wood core with two sheets of metal over the edges. Top end power transmission, torsional stability and edge grip.

ENERGY 2 CARBON

Full wood core with two sheets of carbon over the edges. High performance sandwich construction at an affordable price. Confident stability and edge grip with a smooth and forgiving feel.

ENERGY CA

A lightweight full sidewall construction utilizing two wood stringers and a layer of Carbon providing an extremely agile and comfortable ride throughout the mountain.

MOUNTAIN
SKI COLLECTION***

NRGY & NEW BELLE SERIES

THE EVOLUTION OF LIGHTWEIGHT PERFORMANCE

NRGY

The NRGy collection features modern and versatile all mountain skis on the mountain. With a lightweight i-Core TI with Torsion Bridge construction, each ski offers incredible performance and control at a lighter weight. Built with all-mountain camrock, each NRGy excels on hard pack groomers, bumps, crud, trees, or pow, providing a new level of confidence wherever your skis may take you.

I-CORE TORSION BRIDGE TI

The confidence of metal without all of the excess sluggish weight.

NRGY TIP

The tip has a new modern shape with a little relief on either side that makes the ski super playful and easy to steer in soft snow.

NRGY TAIL

We've introduced a new tapered tail with a little rocker to make the skis really maneuverable off piste yet strong and powerful on hard pack.

BELLE

For hard-charging women who seek the perfect balance of lightness and performance, the Nordica Belle series was designed from the ground up with the specific needs of women in mind. This series features a wood core designed to reduce weight and stiffness making these skis nimble and stable. The Belle series delivers what women want in an all mountain ski—lightness, versatility and performance.

BALSA CORE CA

A Microlam designed exclusively for women.

ENGINEERING

The Balsa Core is a microlam construction made up of many thin balsa wood stringers stacked side by side, which provide a strong and damp metal like feeling at an extremely light weight. This damp feeling allows skiers to rip through any conditions.

OCHROMA PYRAMIDALE: THE BALSAL TREE

We use the fastest growing hardwood in the world for our cores, making our skis rock-solid and environmentally sustainable.

BALSA UNDER A MICROSCOPE: NATURE'S NATURAL STRENGTH

- Highest strength to weight ratio of any Hardwood.
- Cell geometry provides shock absorption, giving damp metal like performance.
- Strong & light structure due to extremely large cells and thin cell walls.
- 60% Air (cells) and 40% solid material (cell walls).

CAMROCK PROFILE

ALL MOUNTAIN

All Mountain camROCK! Technology pulls the traditional contact point of the tip back about 25% and the tail 5% creating slight tip and tail rocker to aid the camber under foot. The result - increased floatation, velocity and maneuverability in soft snow as well as significantly increased ease of turn initiation in any condition.

AVENGER DRIVE ELEXA

ONE SKI TO RULE THEM ALL

When it comes to the one-quiver ski, look no further than the Avenger.

CONSTRUCTIONS

ENERGY FRAME CA WOOD PARTIAL SW

Offers a technology for advanced skiers who are looking to enjoy a long day of skiing while using minimal energy. The partial sidewall combines an easygoing cap construction in the tip and tail with an ABS sidewall under the foot for maximum edge grip during on-piste skiing. In addition, this construction has two stringers of wood and a CA layer that makes these skis very easy to handle while not giving up any stability.

ENERGY FRAME CA WOOD

Offers a construction that is designed for people who are looking for an easy, confidence-building ride. With two wood stringers and several layers of CA, this construction makes it easy for skiers to stay in balance even if they are not stable throughout the turn.

CAMROCK PROFILE

RECREATIONAL

Recreational camRock skis' Transfer Zone (TZ) combines all mountain rocker with an evolved sidecut that maintains its widest point 5 times longer than a traditional ski. The result is a profile and sidecut that work together to give you the benefits of rocker without losing the dynamic energy of a traditional cambered ski. The TZ in the tip allows for a much more precise and efficient edge transfer into the turn significantly increasing the skier's balance; while the TZ in the tail makes the ski easy to disengage at the end of the turn.

THE FUTURE OF SKIING, BUILT BY OUR FREESKI ATHLETES FOR YOU

The Nordica Freeski series has evolved into a top-of-the-line collection for skiers looking to hit the backcountry, ski powder, cruise through the park, or make moves in the city streets.

CONSTRUCTIONS

ENERGY 2 TITANIUM

World Cup technology full wood core with two sheets of metal over the edges. Top end power transmission, torsional stability and edge grip.

ENERGY 2 CARBON

Full wood core with two sheets of carbon over the edges. High performance sandwich construction at an affordable price. Confident stability and edge grip with a smooth and forgiving feel.

BALSA CORE CA

A Microlam designed exclusively for women.

CAMROCK PROFILE

POWDER

Powder camROCK! skis are built to ski powder in ways never before thought possible. With significant rocker in the tip and tail, these skis float effortlessly. By retaining a bit of camber under foot, these skis are still exceptionally stable and track comfortably in all snow conditions. Yes, even on the hard pack! The very low, broad, "Hammerhead Nose" design maximizes on edge snow contact while reducing unstable tip vibration that is a common in other rockered skis.

ALL MOUNTAIN ENFORCER - SANTA ANA

All Mountain camROCK! Technology pulls the traditional contact point of the tip back about 25% and the tail 5% creating slight tip and tail rocker to aid the camber under foot. The result - increased floatation, velocity and maneuverability in soft snow as well as significantly increased ease of turn initiation in any condition.

ALL MOUNTAIN SOUL RIDER

All Mountain camROCK! Technology pulls the traditional contact point of the tip back about 25% and the tail 20% creating slight tip and tail rocker to aid the camber under foot. The result - increased floatation, velocity and maneuverability in soft snow as well as significantly increased ease of turn initiation in any condition.
