

[technical data]

Cork 141cm

Sidecut: 116-85-112 • **Standard Mounting Point:** 702mm • **Radius:** 14.79m

Who Would Ride It-

When you pop the cork you're hucking yourself. You love air, but it's totally lame when your skis won't carve ripping turns on your way to the park. Fear not, with the Cork you can carve the mountain into strips. The catch-free tip and tail slay the variable snow conditions when you go sun to shade in the pipe. Speed Range: 6-10

Features-

Forward waisted for tricks with a new Freestyle Camber that has early rise and reverse sidecut in both the tip and tail. The Razor Cut sidecut is positioned in the middle boosting grip for takeoffs and carving turns on hard snow. The Cork is made with the most durable wood-core sandwich, sidewall construction.
